1. 150 MHz FM receiver for POCSAG pager needed!

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-01 00:00:00 UTC
From: ecn@bis.bg
Message-ID: <01BD2F66.F3698370@HOME>
Source record: 179687

Hi All,

My name is Evgeni Nikolov. Currently I'm working as an AS/400 programmer for Deloitte & Touche. In my free time I use to do some programming on PIC16F84 microcontroller (http://www.microchip.com/10/Datasheet/PICmicros/PIC16F8X/PIC16F84.htm) . Now I am working on a project witch combines PIC16 and a FM receiver. Together they can receive and decode POCSAG-coded paging messages from national service provider (in Bulgaria there are several). The digital part of the device is almost ready. But I have very litt
le experience with RF devices, so I need help very much.

The module I'm looking for is RF receiver and FM demodulator for 150.175 MHz. I prefer to be able to tune to different frequencies. The step is 20 kHz and deviation is 4 kHz. I2C protocol is preferable but any other is OK. I found many pager receiver chips, but they are rather complicated (have more than 10 coils) and don't have any tuning capability.

After some research I have found two chips from Phillips (TSA6057 and TEA6100 http://www-u
s.semiconductors.philips.com/cgi-bin/newsearch/pip?typenr=TSA6057&search=TSA6057 and http:
//www-us.semiconductors.philips.com/cgi-bin/newsearch/pip?typenr=TEA6100&search=TEA6100).
But as far as I can understand they need extra elements and I don't know how to connect each other. So - that is. Help!

Of course after (if) I finish this project I will publish it in my web page ((http://www.bis.bg/~ecn) for free and everybody will have it.

Thanx in advance.

Evgeni

This assumes that after being tested for Morse you continue to
use (not required by the license) and that Computers can't do a better
of decoding and that somehow voice will not work, if someone does't
pick help then Mayday is oft used, and if Mayday isn't known to the
user then he isn't going to help you anyway and on and on

It also over looks the fact that you don't need to know much
a bout Morse to reconize that an SOS is being sent, and if I hear such
on HF (or VHF or UHF) I know it is distress and I can call up the
right program and decode it. The idea that I am going to have an HF
radio, without having my laptop, but would still be in a position to
do something about that distress is absurd.

For CW to save that one life it need not be required to learn
(much of) it by ear. Indeed alll that is required is to test the
ability to reconize SOS in Morse, for the emergency uses of Morse

This line of reason supports NoCode even than code. After all
if there are are more people on HF then more people have a chance to
save lives. Which will save more lives, more HF Phone operators or
the given number of CW people (which does slowly increase of course),
or even beter people who simply reconize SOS in Morse when they hear
and and lock in a decode program. By your logic if droping the CW
requirement would save one life it is worth it, Stop codenming people
to death.

When I was trying to operate hf packet, serveral years ago, I found two things helped me. (1) tune in the signal so it sounds good (that you will get used to) (2) using most of todays tnc's, which have led tuning devices, adjust the indicator untill you get an even mark and space signal, eg both are about the same intensity and at each end of the scale.

>purchase top-notch amateur gear in areas where it might not otherwise be
>available,

I was heavily involved in the situation being described. Let me assure Rambo and others that there was much more to the situation than was described in the newsgroup..

As for denying anyone access to purchasing a radio, let me suggest that you compare the prices of radios at a truck stop with prices from any other outlet. The RCI-2950 is a good example. It is for sale in T/A nationwide at $80 to $100 over the price from ANYWHERE ELSE!

While there are many truckers who are Amateurs, very few of them purchase equipment at local radio dealers, let alone at a truck stop.

Incidently, I recently looked into a complaint by amateurs on the east coast that a regional truck stop chain was selling RCI-2970's with a large sign reading, "World's Most Powerful CB". After some polite discussion with the president of the company and his lawyers, I was advised that the chain made a business decision to discontinue this line of advertising. That kind of cooperation always is appreciated! I also am pleased to report that several T/A outlets which were tested refused to sell the RCI-2950 as a CB to a truck driver. The counter clerks explained the need for an Amateur license and recommended that the individual purchase a type-accepted transciever. The names of the clerks were noted, and a complimentary letter was mailed to T/A headquarters and to the associated district managers.

This information is posted as encouragement to those hams who have noted intruders in the 10 meter band. It often is asked, "Why isn't somebody doing something?" Be assured that every effort is made to perserve people's jobs, and to not deny anyone's right to purchase a radio when and wherever they want. The important thing is that the radio is accurately presented to prospective purchasers.

This is not the action of a "small but vocal minority of oppressors," as Rambo suggests. The mail on the Kenwood proposal was unanimously against truck stop sales. Many of you probably have read the several-page response Kenwood sent to all who wrote to them.

Best regards,
Yrac

Yea, but if he develops as sound an understanding of his courses as he has of radio and electronics - never mind the ability to communicate in writing - he will soon be on a plane back home.

Imagine a guy like this with a degree to practice engineering???? I hope he is studying history of movies or something similar, with little danger of doing any real harm to anyone.

(I love that explanation of images!)

Not akin at all. While it can be pretty obvious that a
driver will need to parrallel park at some time, there is absolutely
nothing that ever requires use of CW.

It's got nothing to do with having "stones." It's got everything to do with having past experience with "stoneless" cowards who get an address from a posted callsign and decide to have some fun.

Does that include us "no-coders" who are happy with the privelages we have on VHF and above and are not pushing for no-code HF access?

Frankly, I cannot understand why this class of operator could be a thorn in your side; unless you have had bad dealings with several tech's and choose to brand the whole lot. Perhaps you have always been against the restructuring of the Technician class to Tech and Tech +; well you can either embrace change and help it to form in a positive manner or sit back and be unhappy.

73,
KE6MAK Howard

We're even, Dickster: IMO, you have perfectly addressed your own contention
that to "eliminate the test" will "eliminate the code" -- "it is based on whim
and not fact."

> ... Not today, but too soon. That's what we are
>fighting, simply because we are even more convinced that we are right
>then you seem to be in you holy war.

That's "jihad."
In any case, regardless of how you personally are conviced, the fact remains
that it is the removal of the Morse code TEST for HF frequency access licensure
-- NOT banning of Morse code as a mode -- which we (who care about the future,
as well as the past and present) are attempting to bring about.

And which frequencies would we lose, Drew? Certainly not any HF.

We did quite well before that 25% entered the ranks (three new HF
bands during the 80s!). If they suddenly went away, we'd continue
to do quite well.

Oh, you misspelled a word in your post.

I know the subject header sounds mean, but its not as bad as when we took the "Town Council on Aging" sign and hung it up at the local cemetary.

This, to me, seems the way of the Morse Code Requirement.

Perhaps you have a chip on your shoulder. The folks I associate with don't judge people by their license class. If some old fart slams you with no reason, go looking for a better class of friends. Or get mad, upgrade to Extra, and tell him where to stuff his attitude.

If you can't take a bit of negativity, you'll never make much of a ham. Hams are people, too, and they have all the assets and liabilities of any other group, including UseNet posters.

>of CW is a RESULT of this technology. Forty years ago...sure, it was "magic"
>to be able to send mechanical noises over the airwaves and communicate.

1975 was 23 years ago, not 40 years ago. And even then I could have picked up
the phone and called someone. There's something more to radio than just
communication. It's an art combined with a service combined with comm.
And for those of us who still enjoy stringing up antennas, neutralizing finals
and trying to pull-in the weak ones in early morning hours, there's still a
little of the magic left.

> These
>days, we have virtually free worldwide communications of audio, video, text,
>etc.

Cost is not the issue, I don't believe. Otherwise no one would work EME
or ham satellites. This equipment is more expensive than the internet or
phone service it would take to pass the same traffic.

>Some people continue to embrace CW and send messages
>with a brass key for nostalgic purposes...and that's fine. But
>there is no legal justification in this day and age for continuing to require
>proficiency in Morse code as a condition of obtaining a radio license from the
>government.

It isn't. You can get lots of radio licenses from the government without
Morse. Marine licenses, Tech ham licenses, etc. If you don't want to get
on HF ham frequencies, don't even bother. As far as legal justifications, I
am not a lawyer. We need to be able to use all modes, not just those we
happen to be interested in at the time of testing. And we do need some
kind of real-time, hands-on radio test without a prepublished question pool.
Right now, Morse is all we have in that area.

>It is my belief that the Morse issue will eventually be argued in
>court on those grounds, and the requirement will then likely be dropped.

Well I hope that doesn't happen. Imagine, a prospective ham suing the government whining for a license instead of studying and practicing for it. But in our society, I agree, it's only a matter of time before someone tries it.

Hopefully, the truck driver who was denied the opportunity to purchase the radio then contacted his attorney and filed a discrimination lawasuit against the retailer. As a retailer, you do NOT have the right to deny the sale of a legal product to any customer who wishes to purchase it and is legally permitted to do so.

Not to mention, it's bad business for the retailer. For every 10 of these radios he sells to CBers, he MIGHT sell one to a ham operator. You HAMBOS should thank CBers...they comprise 90+% of the market for these radios. This is what allows the mass-production of these radios and allows you, the 10-meter ham operator, to pick up a nice little mobile like the 2950, 2510, Emperor, etc., for around $200.

I personaly think it's time to intergrate High-Tech With Tradition.
A "chioce" in the general exam such as "Packet" module
and "code" module would solve the LAZY give away the
license syndrome problem, The knowledge it takes to send and
recieve packet on ham radio is far above any layman channel 19
rambo's intellecual ability, but the "code" only option is unfair to
those spending all the presious time needed to study the
fundimentals of "High-Tech" radio comunication.
It's time to stop sending smoke signals to one an other and
advance into more mathematical skills to pass that test.
"Feer not my RF friends , High Tech minds don't SWEAR over
two way radios".

Hello,

I have a Timewave 59+ DSP filter for sale.... I have had the unit for less
then a month but ICOM has come out with a new DSP built for my ICOM 706MkII.

The Timewave 59+ works and looks as new....

$160 + shipping I want it to move... =)

>permitted to do so.
>

You still don't get it, do you???? The "truck driver" was testing whether they would represent the RCI-2950 as a CB radio. Why would he be offended if they advised him NOT to buy it? That was the correct response for the clerk to give. She recommended one of the type-accepted radios. She didn't REFUSE to sell the radio; she only advised the customer that the one he asked about might not be the best choice. Had this been an actual customer, I fail to see how, in your wildest imagination, you could believe his "rights" were violated.

If you're so hot on protecting everyone's rights, Rambo, stop contradicting posts in the CB newsgroup which remind freeband operators to stay below 28.0 MHz. What happened to the rights of Americans who obtained a license to use the 10 Meter band? Or do rights matter only when they are YOURS?

46. Re: Interference with cable/phone?

>
>First of all, am I correct in my deduction that this is probably caused
>by a ham operator?

Maybe, and maybe not. It sounds like it is a SSB signal, which could be ham or CB. Keep a log of when the interference occurs.

A local ham radio club could help you determine the frequency of the radio signal, and probably could help you pinpoint the source. They also will have ideas on how to resolve the situation, peacefully.

For info on the nearest radio club, ask at Radio Shack, or visit www.ARRL.org

>
>When one takes an exam, the exam does not ask you how the engine works
>nor how the speed meter works. Instead, you get an exam which is
>directly related to actual operation of the vehicle... practical.
>
>

Several states ask the following question:

"Driving a car off of an eight-story building would produce the same crash force as a collision at what speed?"*

I don't plan to drive off an 8-story building, but this info sure made me think about avoiding a collision!

*Consult your local DMV for the correct answer.

Stan:
You can get them with a 1-mile range, but they are VERY expensive. Have you considered going with something like the 900 MHz remote speaker systems?

>the
>benefit of future applicants.

Ah ha! Perhaps we are getting closer to discovering the source of your anger against the Amateur community. There is someone whom you want to see licensed, and code is holding them back?

A.N.A.R.T.S. News Bulletin 992 25TH JANUARY 1998

COLS COLUMN
-----------
EARLY ELECTRICAL COMMUNICATIONS. DAVEYS TELEGRAPH.

EDWARD DAVY BUILT A TELEGRAPH IN 1836 THAT WAS SIMILAR TO THAT
OF ALEXANDER, PREVIOSLY DESCRIBED. IT WAS HOWEVER MORE
DEVELOPED AND MIGHT HAVE BEEN A SUCCESSFUL RIVAL TO COOKE AND
WHEATSTONE'S TELEGRAPH. IT WAS DESCRIBED IN THE 'MECHANICS
MAGAZINE'. THE TRANSMIT END OF THE SYSTEM HAD A KEYBOARD WITH
EIGHT KEYS, EACH OF WHICH BY DIFFERENT MOVEMENTS PRODUCED
THREE CHARACTERS, PROVIDING 24 IN ALL.

AT THE RECEIVING END WAS A WOODEN CABINET WITH A GLASS FRONT.
THE 24 LETTERS WERE CUT OUT OF WHITE PAPER AND LIT BY A LAMP.
EACH CHARACTER WAS ONLY VISIBLE WHEN A SMALL SCREEN IN FRONT
OF IT WAS REMOVED BY THE DEFLECTION OF A NEEDLE, MUCH THE SAME
AS IN ALEXANDERS TELEGRAPH.

THE ARTICLE IN THE MAGAZINE STATES, 'THE RECEIVE OPERATOR IS
FACED BY AN APERTURE SIXTEEN INCHES LONG, AND THREE OR FOUR
INCHES WIDES, FACING THE EYES, PERFECTLY DARK. ON THIS THE
SIGNALS APPEARS AS LUMINOUS LETTERS, WITH A NEATNESS AND
```

RAPIDITY ALMOST MAGICAL'.

DAVY WAS ALSO WORKING ON A CHEMICAL RECORDER FOR THE RECEIVE END. A RECEIVED SIGNAL WOULD CAUSE A STYLUS TO DIP AND TOUCH A STRIP OF PREPARED PAPER, THE MARKS MADE SHOWING THE SIGNAL BY ELECTRLYTIC ACTION.

THATS ALL FOR NOW, BUT WE CONTINUE NEXT WEEK WITH THE 'RELAY' AND DAVY'S PART IN IT.

73'S DE COL VK2CTD.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(16 JANUARY - 22 JANUARY)

ISSUED ON 23 JANUARY 1998

SUMMARY
Date 16 17 18 19 20 21 22
10cm 98 96 95 94 91 91 93
A 5 4 8 4 8 6 (2 expected)
T 40 32 0 44 43 12 34

Solar activity was very low all week.

The geomagnetic field at Learmonth W.A. was quiet to unsettled 16th to 19th, and 22nd January; and unsettled to active on 20th to 21st. There was an active period on 18th from 1200 to 1500 UT.

Maximum usable frequencies were near predicted monthly values on 16th, from 0700 UT 20th, and 22nd; mostly depressed to 15 per cent on 17th and 21st. Due to computer problems there was no data available on 18th, 19th, and to 0700 on 20th.

FORECAST (23 JANUARY - 29 JANUARY)

Solar: low to moderate

Geomagnetic: Active periods possible on 23 Jan. Active conditions with chance of minor storm expected for 24 January, due to a Coronal Mass Ejection reported on 21 January. Quiet to unsettled on other days.

Frequencies: Slightly degraded HF conditions expected morning of 23 Jan. Depressed and degraded Hf conditions expected on 24-25 Jan in association with anticipated geomagnetic activity. Near predicted monthly values on other days.

NOTES OF INTEREST:

SPRATLY ISLAND, 9M0C. The main team plans to arrive on Pulau Layang Layang on Tuesday, 10 February. Two days earlier than originally planned. This gives them three full days to set up the very extensive antenna farm and five stations. The second

group will arrive on Friday. Then will be fully operational for at least nine full days including two complete week-ends.

COMOROS, D6. Martin, HB9CYN, and Chris, HB9CYV, will be active as D68YN and D68YV, from 25 January to 6 February. All bands 80-10 meters (maybe 160m). Operations mainly CW with some SSB, and maybe RTTY.

OPEN UKRAINE RTTY CHAMPIONSHIP'98 22-00 GMT 28 Feb. 98-01-59 GMT 01 Mar.98. Only 4 hours. 2 Band's: 1,838-1,848 MHz; 3,580-3,620 MHz. Mode:RTTY. Call: CQ UKR. It is authorized to conduct repeated QSO in 30 minutes on each band is independent. Exchange: Two letters, the abbreviation of region (state, canton, province, land, uyzd, district, county, lan, etc.) + serial number starting from 001. example: Poltava region (Ukraine) - PO001; Ancona (Italy) - AN021; Alsace (France) - AL035; Gotlands lan (Sweden) -GO123. Scoring: 2 points for each contact (including repeated QSO in 30 minutes) + 10 points for new region (province, canton, district, etc.) on each bands. Final scoring: Sum total on 3,5MHz + sum total on 1,8Mhz. Classes: A - single operator, two bands; B -single operator, 1,8 MHz; C - single operator, 3,5 MHz; D - multi operators, one transmitter. Awards: Diplom 'CHAMPION OF UKRAINE RTTY 98' first place for classes A and D; Awards 'UKRAINE' top ten station for all classes. Logs: All operators in any Class must send separate logs for each band worked, as well as dupe-sheet if needed and summary-sheet. Comments, anecdotes and suggestions will be welcomed. Note: We shall make the control each of LOG's with use special software and computer therefore it is desirable LOG to execute on an adduced breadboard model. This form LOG is convenient for direct input of the information in the computer. Format - ASCII (is desirable). Prepared LOG it is desirable to grant as a file through PACKET RADIO or E-mail, for fast processing and definition of results this CONTEST. For example: CONTEST LOG 3,5 MHZ SM4ZZZ Gotlands lan (GO)
SM4ZZZ 2200 UX0FF GO001 OD003
SM4ZZZ 2203 DL1AAA GO002 ZZ010
SM4ZZZ 2205 RZ9CWA GO003 SV030 etc.
Address for LOGs: GEORGE IGNATOV,(UT1HT), P.O.Box 87, KREMENCHUG-21, UKRAINE, 315321.

ARLD002 DX news
This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, G4BUE, The 599Rpt, QRZ DX, Jari, OH2BVE, Harv, K2PI and Contest Corral from QST. Thanks to all.

SWAZILAND, 3DA. Jon, 3DA0CA, is active on 1827 Khz from 0300 to 0330z most days. QSL via W4DR.

MALDIVES, 8Q. Members of the Central Arizona DX Association will be QRV beginning January 18 as 8Q7AA. They expect to be here until January 28. Activity on 160 to 10 meters, using CW, SSB and RTTY, is planned. QSL via N7TX.

KUWAIT, 9K. Bob, N6BFM, expects to be active as 9K2ZZ for about 1 year. He is presently active on 40 meters. QSL via W8CNL.

CROZET ISLAND, FT/W. Jean Paul, F5BU, is expected to arrive on Crozet Island, IOTA AF-008, on January 21. He will be active using mostly SSB as FT5WG until March 18. QSL via F6APU.

JORDAN, JY. George, JY9QJ, has been QRV on 160 meters just before 2000z. QSL via DL5MBY.

GUATEMALA, TG. A group of Finnish amateurs hope to activate TG0OH from January 18 to February 5. Activity on 160 to 10 meters, including the newer bands, using CW, SSB and RTTY, is planned. QSL CW and SSB contacts via OH3JF. QSL RTTY contacts via OH6XY.

BURKINA FASO, XT. Mike, F5RLE, will be active as XT2DM on all bands using mostly CW from January 22 to March 9. QSL to home call.

CHATHAM ISLANDS, ZL7. Ed, K8VIR, is QRV as K8VIR/ZL7 until April. He will be active on the usual frequencies. QSL to home call.

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 340

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, WB2RAJ/WB2YQH and The 59(9) DXReport, W5FKX, K7BV, K7WX, K9NW,

N0TG, 9K2HN, F6AJA and LNDX, FR5DX, G4BUE and DX News Sheet, G4BWP, G4ZVJ, JA1ELY, LX1NO, OA4QV, PT2NP, UA2FZ, VE2EH, VE3BW, VK3RX and ZS6RVG for the following DX information.

4X50, ISRAEL. Look for this special 4X50 prefix with a /SK suffix to be used until May 1st to celebrate Israel's 50th anniversary.

9G5, Ghana. Andy, G4ZVJ, will be active from here February 5th through March 1st, as 9G5VJ. Activity will be on all HF bands, mostly CW, including the ARRL DX CW Contest and possibly the WPX RTTY Contest.

CO2, CUBA. Look for Winston, CO2WF, on 40 meters (7050-7060 kHz) between 0200 and 0300z (SSB mode). He is also very active on 14151 or 21215 kHz between 1900 and 2100z. Also, he can sometimes be found on 12 and 17 meters, CW. QSL via VE2EH.

GB50, ENGLAND (Special Event/Prefix). During the month of June, the station GB50MKI will be active to celebrate the 50 years since the Mark 1 computer was programmed. It was designed in the Engineering Department of Manchester University. The station's HF operations is expected to be active on ALL band, although emphasis will be placed on data modes. Other modes will also be activated. Brief information may be obtained via the Web site: http://www.mcc.ac.uk/Radio/

XT, BURKINA FASO. 'The 59(9) DXReport' states Mike, F5RLE, will be active on all bands, mostly CW January 22-March 9 as XT2DM.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA at VK2WI.

From: yrac@aol.com
Message-ID: <19980201095401.EAA11429@ladder02.news.aol.com>
Source record: 179781

A well-written posting, blueis. Right on target! Like you, I have been licensed a long time (37 years) and have seen radio change a lot. However, all of society has changed, so I suppose one should not be surprised.

Everybody is a "victim". They should not have to obey the rules. They want everything adjusted to THEM. Only their rights matter, at the expense of the rights of others.

I support anyone's right to post his opinion to the newsgroup. I do object, however, when they do so claiming the lofty purpose of paving the way for future applicants. Somewhere, at the bottom of the hype, lies an intensily personal reason for dropping the code. It may be for them, personally, or for a family member.

The No Code arguement is not about technical advances in communications leaving the mode far behind. (By the way, thank you, the CW portions of the ham bands are very popular with young and old operators, and one band is CW only). The arguement is simply typical of society's attitude: "Make an exception for me!"

Blueis added:

> I just hope the younger hams don't tune into this NG and think
>this is the way you're supposed to act when you get licensed or when you
>grow up.

I agree wholeheartedly. It would be similar to letting young people think that watching soap operas is a good way to learn how personal relationships should be conducted!

Please post again, blueis. Your comments are like a breath of fresh air!

52. Motorola JT1000 audio problem

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-01 00:00:00 UTC
From: trynorZZZ@nbnet.nb.ca
Message-ID: <6b0tck$h31$1@garnet.nbnet.nb.ca>
Source record: 179782

I recently purchased a Motorola JT1000 UHF protable and have found it
to be an excellent radio. I am however having one problem. When I have
the radio set on a channel with carrier squelch (CSQ) and someone encodes
a PL tone on that channel, I get a loud distorting "buzz" from the PL tone on
the speaker. Believe me, it is annyoing.

By setting that channel to PL squelch, the problem goes away as the
radio apparently filters the PL tone out; however I don't want to have that
channel with PL squelch, but rather carrier squelch so I can listen to other
users.

Anyone have this problem and know of a fix for it?

Regards,

Don Trynor VE9NZ

you down at
>all.

Ever so politically-correKt, aren't we? The only "trouble" said "amateurs"
have in learning the code is the the desire to get on HF phone. They
don't want to be CW operators, so they have problems learning the
code. I say, we don't need 'em. The phone bands are already
overfull of so-called "hams" who managed, somehow, to pass the
code tests. I say, let's bring back re-certification of code proficiency
at license renewal time! That should clear out 75-meters quite
nicely!

Now, back to the original point. The No-Code camp wants the
>code
requirement dropped as a part of amateur testing. That is all fine
>and
dandy. The problem is that this is not likely to happen any time soon.
>
If it does, GREAT. Then we can all find something else to argue about.

Sure. The argument then will be "do we drop the U.S. HF phone bands
all the way down to the bottom of the bands, or leave an 'exclusive'
CW/DATA sub-band; and if so, how big? 25 or 50 KHz? After all,
we need more 'lebensraum' for all the new no/slow-code HF 'hams'
using HF SSB."

>N1LLF
>cowboy@ccast.com

And you know what? There's nobody putting a gun to anyone's
head and forcing them to get on HF, or even ham radio.

What can we offer? How about a bunch of folks, well-versed
in communications PRACTICE - in the ones that people don't
think about 99.99% of the time but they sure as heck are
thankful for when it's there...

To this end, ALLLLLL modes which we are capable of learning
CAN and SHOULD be learned. It's importantto be able to communicate
via the help of a beautiful new FT-1000D and a computer. It's
also important to be able to communicate through the use of an
old crystal 2m rig that accesses a repeater or set of linked
repeaters.

It's also important to be able to communicate, via hand and
WITS, via the simplest transceiver we could possibly build.

Our job: GET THE JOB DONE, GET THE MESSAGE THROUGH. PERIOD.

WE can communicate when there's nobody to rely on but OURSELVES.

Our KNOWLEDGE and COLLECTIVE ability to communicate is unique.

Each of us is an INTEGRAL part of the puzzle.

Few groups of people can say that.

To those who say, "why should I do any of this when I can
just get an e-mail account," I just say "then you don't get it,

and maybe you should just go and get an e-mail account."

Quite obviously, ham radio is a communications OPTION. Look how we are conversing...115,200 baud whereas we don't pick up the phone anymore.

You will, however, find me doing Morse, along with thousands of other people throughout the US and the world. Why?

Because I want to, I'm good at it, and I enjoy it. I don't operate RTTY but I once had to learn how. Same with packet. Same with SSB transmitters, FM repeaters, etc.

LOOK for a second. "WHY ARE WE HERE?"

Knock out cell phones, and "society" can't handle it. Knock out a repeater station, and WE DO know what to do.

What we can offer, and DO offer, to the world is a bunch of well-trained operators who can interoperate well. Morse is even today a viable part of that picture, as are SSB, AM, FM, Packet, RTTY, AMTOR, PACTOR, Packet, Clover, and others.

Oh yes, and it's FUN for us. Remember, it's voluntary, and you couldn't pay someone enough to do something he/she doesn't want to do.

As they say, "If you don't get it, you just don't GET IT."

GPS Satellite, Loran, EPRIB, DSC (Digital Selective Calling) and GMDSS
(Global maritime distress and safety system)

Navigation is done by the Satellite and Loran.

Distress:

1) Distress is initiated by DSC and the manual acknowledement is
also digital.

2) Emergency Position Indicating Radio Beacon (EPRIB) activated
automatically or manually by switch.

406.025 MHz digital
- COSPAS and SARSAT satellite connection.

It also transmits on

121.500 MHz AM

243.000 MHz

1) and 2) must be made possible by all commercial vesslels (effective
1999)

Keep up with the technology !!!!! No CW !!!!!

yeah but those fail for what reason ??

you can't say electricity because if you don't have electricity you can't use CW also. (and you have batteries then you can use either voice or HT so you shouldn't have batteries also in order to support your statement. Please support your statement. One can say anything, but without supporting his "anything" is very weak.)

>Perhaps you could enlighten us with what modes you consider 'analog' and where

I have been reading the mail on this one and just had to say that I
thought
CW was digital. There are only two levels, off and on. Ones and zeros.
The timing is not quite as accurate as a clock in a computer but may be
more flexible. I can transmit cw with one transistor, a couple
resistors and capacitors, a crystal, 9 volt battery, and a piece of wire
for an antenna.
On one occasion I was on the receiving end 300 miles away and the signal
was S9. I have also sent code with two wires as a key (read that
digital modulator).
I like to tell prospective hams that they sholul be able to one thing as
a minimum to be an amateur radio operator:
Go get the following stuff and set up a radio station and send and
receive a message. Receiver, transmitter, wire, coax, solder and
soldering iron.
They should be able to cut and build a dipole that will work.
They should know enough to hook up the receiver and transmitter.
With out a key or microphone (sometimes microphones break amd no one
ever has a key now) they should be able to use 5 wpm morse code to
communicate either by using two wires as a key or possibly the switch on
the transmitter.
In an emergency situation we do not always have everything we would like
and must be mentally prepared to adapt.

that's the problem of pro-CWers nowadays.
You don't know 1/4 of amateurs are no-coders. Losing them will make
lose amateur bands.

>Does that include us "no-coders" who are happy with the privelages we
>have on VHF and above and are not pushing for no-code HF access?

how about who have CW and pushing for no-code HF access ? (most of us)

=)

>Frankly, I cannot understand why this class of operator could be a
>thorn in your side;

because they think you have to use 286 instead of Pentium. you have
to use DOS instead of Windows. you have to use CW instead of voice.
you have to use old and obselete stuffs instead of appreciating new
technology.

>tech's and choose to brand the whole lot. Perhaps you have always
>been against the restructuring of the Technician class to Tech and
>Tech +; well you can either embrace change and help it to form in a
>positive manner or sit back and be unhappy.

I found most of pro-CWers (who has only CW transmitters or at least
only HF stuffs and outside HF antenna) during the emergency (montreal
area ice storm) sat down and did nothing for providing emergency
communication because simply they couldn't do anything about it.
Power was down. Antenna was down (because of heavy ices. most of
beam antennas just collapsed). Car batteries couldn't be recharged.
The ones who participated actively in providing emergency
communication were who had lots of HTs and batteries, and I saw they
were mainly no-coders.
Until you actual have this kind of emergency, you don't realize that
having CW transmitters in your shack is useless.
Think once. Think twice.

You are correct, it is not 100% effective any more than the written test is.

>BTW, one communication mode is more *respectable*
>than another communication mode? What is the pecking order of the
>various modes?

Based on overall band courtesy, asking if frequencies are in use, moving to a clear frequency when band condition changes cause QRM, being ready to switch bands/modes if conditions worsen, clean vs. dirty language, and having some idea which end of the radio the electrons come out of, I would say:

CW
Digital not including RTTY
AM
USB
RTTY
FM
LSB

It is an interesting question you ask. The AMers get a little "ding" for operating too close to LSB ops on 75m, and taking up the inherent extra space on HF. But since there is no official AM window, it is usually the LSB ops which come onto the frequencies AMers are trying to use. The LSB ops take a major hit for the trash talk on 75m at night, and also for the DX LSBers operating on top of CW QSOs on 30m instead of establishing a voluntary SSB window like the digital guys did. RTTY is a little further down than the other digital modes because of coming on frequency too close to existing QSOs, but we must remember that automatic digital modes by their nature are automatically resilient to this occurrence.

Opinions?

This has not been my experience. However, we all can appreciate the situation you have been in, recently.

HF radio, with SSB & CW, has more long distance, point-to-point value. 2Meter FM is very handy for local communications.

REPLY...

You know Glen, I started to write a long-winded reply to your message, listing my reasons for the feelings I have, but I quickly realized that was a complete waste of time.

Either you know what I am talking about, or you are lucky enough to have never run into it. Since you obviously don't know what I am talking about, consider yourself lucky.

By the way, since I wrote that original message a couple of hours ago, I have received two email replies from higher license holders, both telling me to get out of amateur radio.

One, of course, told me to go back to cb radio. I don't know how cb was applied to me, other than the fact that this person (like many higher license holders) equates the technician license with those unwanted, bad-mannered, operators on cb.

Even though this person has never heard me operate a radio, he is judging me as unwanted in ham radio based solely on my license class.

Thanks for your ideas on the subject. By the way, as an active CW operator, I am finding many new and younger hams operating on CW. I don't wish to argue the requirements for an Amateur license. I only want to correct your sterotype of the "typical" CW enthusiast.

Dwight I would bet you that someone such as Hans and myself, at 20 WPM, can pass
record traffic faster than you and whoever is the next staunchest anti coder after yourself
can with you two using voice on a HF circuit.

You not being a traffic handler I will explain what record traffic is .. you have to record
everything sent verbatim with exact spelling.

While you two are busy sending phonetics to get the spelling right and
repeating yourselves Hans and I would be rocking and rolling right along.

Curtis .. N5HDQ .. http://wf.quik.com/n5hdq

Here's one need: It is how you obtain HF priv. If you don't care, then wait around. The Code requirement will be dropped someday. At that time, come on in and join the fun.

Same with SSB transmitters, FM repeaters, etc.

But there is no separate testing element required for any of these modes of operation (although perhaps there should be.) Why then is there still a separate element for Morse?

Ah, well then the story has changed. Originally, the claim was made that the clerk had REFUSED to sell the radio to the truck driver because he did not possess an amateur radio license.

Advising someone of the law is appropriate and appreciated; refusing to sell something which the customer can legally purchase constitutes illegal discrimination.

And which frequencies would
>we lose, Drew? Certainly not any HF.

You already lost 40% of 220Mhz. This was a direct result of the ARRL refusing
to endorse ANY sort of codeless license...even the heavilly-restricted
"Communicator Class" which would have only permitted operations on 220. This
would have filled up 220 and saved it for you. Unfortunately, the white men in
Oldington stuck their heads in the sand and the FCC took away 220-222 due to
insufficient amateur usage.

Actually, this is not correct. Most of them have lost their grey hair and are now bald with a few strands of wispy white hair left. Tends to happen when you hit 80, 85, 90 years of age.

The gray haired fuddy-duddies you refer to accomplished the following:
1. Fought and won the wars to preserve freedom (yours included)
2. Elevated this nation to undreamed of heights of prosperity
3. Sent mankind in outer space
4. Eradicated many of the world's dreaded diseases
5. Established a highly efficient and safe food system
6. Brought mass media and education to all
7. Provided a standard of living next to none
8. Invented and produced scientific devices that would have been magic
100 years ago
9. Established a health and medical system for the benefit of mankind

Ya got a tough act to follow, my friend!!!

And remember -- "it is later than you think"

As for the code, it is not the requirement that is at issue -- it is
your
gut-determination to overcome the obstacles of life and achieve your
goals that is in question.

>assistance. I
am just a beginner.

No, you can't even make it into a really bad CB. A CB rig must be incapable of tuning to other than CB channel frequencies, and must be incapable of moe than 4 watts AM or 12 watts SSB.

You can still monitor CB... the frequencies are all around 27 MHz and mostly spaced 10 KHz apart. Most traffic will be AM.

Many modern transcievers can be midified to transmit outside the ham bands. Often this involves nothing more than clipping a diode or two. It is not illegal to do this, but it is illegal to use a radio so modified on 11 meters.

As far as I know, it is still legal to homebrew a CB, but you may not have a continuously variable frequency control on the fromt panel, nor more than the legal output. I was at the Radio shack a few days ago and noticed that they still carry CB crystal pairs for $4 a pair. I think they are meant for single conversion superhets with a 455 KHz IF. I thought about getting a couple to play around with up-conversion Superhet ideas for 15 meters but I got enough stuff to do right now.

Frankly, If you just want a CB, you are best off just buying a CB. If you have a TS-180, get a license and be a ham, or sell the rig and buy a CB.

94. Remote ham radio operating

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-01 00:00:00 UTC
From: k3jim@hotmail.com
Message-ID: <6b26pk$a0b$1@news2.digex.net>
Source record: 179824

I have many restrictions on antennas etc. due to my HOMEOWNERS assosiation rules. I picked up a HAMLINK device at the Richmond hamfest that allows one to remote a base station radio via a TOUCHTONE phone. I know that the new KACHINA rig will be able to do this when they come out with the remote accessory but the HAMLINK has been out for 4 years and there are some of them already in use. Unfortunatley the company AEA went out of business and the successor company TIME WAVE is not manufacturing the HAMLINK at this time. Mine has been in the test mode for about two weeks and it works well. I intend to move mine to my work QTH in a commercial building w/o antenna restrictions in about a month. I am using an ICOM 706 an SGC tuner and an inverted L antenna now. I can operate on VHF 2m FM and SSb and all HF bands.

Any one out there using the HAMLINK or some other device to remote their stations ? Please your comments.

This was posted by a ham operator who does not wish you to use your TS-180 on CB frequencies. What he does tell you is that to do so would be illegal. What he does not tell you is that the TS-180, when modified properly, does indeed perform quite well on 27Mhz.

As usual you are selectively arguing out of context, and not addressing the point.

The driver's tests in question DO against your objections to the contrary require knowledge that is more extensive than turning the key and pushing the long pedal. Your protestions to me are not going to change this reality. If you are so passionate about these matters take them up not with me, but with the Driver's Licensing organizations in question.

Somehow I think you are not interested in making these changes, however. More to the point, you are interested in complaining about them.

Put your words on the screens of those with the power to make change. See if they by your partial, and out of context arguments.

Have a nice day. Let me know when you are going to be driving in Illinois, Cutie Boy. I'll stay home that day...and practice my code.

You can't seem to understand that it is not *you* that is unwelcome
but rather your insistance on telling us how ham radio should be, from a
viewpoint of a newcomer who wishes to mold the hobby/service into his
private view of what the thinks it should be, rather than immersing
himself in the process of qualifying for the HF license.
That is unwelcome.

>We did quite well before that 25% entered the ranks (three new HF bands >during the 80s!). If they suddenly went away, we'd continue to do quite >well.

You neglect to mention that one reason the bands were returned to amateur usage in the states and much of the rest of the world wasn't the desirability of amateur radio, but rather that there was less usage of the frequencies in question.

It should also be pointed out that Congress mandated sale of even more in terms of spectrum of bands that amateurs had access to, in the 90's. It's not just usage that predicates things. Note the call of the little LEO satellite companies for shared usage of 2 meters, the most heavily used amateur spectrum. Amateur radio isn't going to do well with mostly older users, it should be noted that in commercial broadcasts, older listeners are also neglected and programmed for either. It is mostly older hams, who use CW, and find it fun, and unless cw lovers can convince other hams that it is fun, it will die out as a common amateur mode.
The FCC probably doesn't care one way or another about CW, it doesn't have to conduct too many exams (I know that one can still take the RadioTelegraph Exams) with CW, and it's only a matter of time before the only people who can copy cw at the FCC will be amateurs about to retire. What's fun about CW? What can one do with CW that one can't do with coherent CW sent with a computer? Already, a common mode Pactor can be detected and send reliable copy with less signal than one can decode a cw signal by ear (All you MFJ users like me, it's not true for you), and the shy young boys, who once would have found the prospect of talking to folks in other parts of the world or US an exciting prospect, now have the internet. Yes, the numbers are up, but I can drive down the road with an HF rig, and find open frequencies on 20 meters and 40 meters during the day, and I can scan the 2 meter or 70 cm bands and not hear a non synthesized voice for long periods of time. If CW isn't fun, it better have a lot more to offer than just tradition. People got by without using CW to call for help for most of the time humanity has been in existence, and there are fewer and fewer folks who will find it worth studying unless you can convince them it's fun! It's only a matter of time before some wise administration concludes that an chart with the letters, and a code test sent at one word per hour complies with the International requirements for copying code by ear.

Closed Circuit Advisory

The following is a closed circuit advisory. This is just a reminder that the address for the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1067 for release on Friday, January 23, 1997 to follow.

<*>

The following is a QST

Hams come close to losing the right to put homebrew equipment on the air and the ARRL says that its going after serious violators of the Amateur Service rules. These stories and more on Newsline report number 1067 coming your way right now!

<*>

ITU almost outlaws home brewing

An amazing revelation. Ham radio came close to losing the right to put home brew equipment on the air. This, as a result of technocrats at last November's World Radiocommunications Conference in Geneva, Switzerland.

Delegates in Geneva were asked to consider type approval for all equipment used in the Amateur Radio Service according to a story in Fred Maia's W5YI Report.

But the quietly made pitch to working groups at the International Telecommunications Union meeting in Geneva was countered by the International Amateur Radio Union, since type acceptance would have made it illegal for hams to design and build their own transmitters -- something we've done throughout the history of the hobby.

Other working groups meantime wanted to implement a uniform set of spurious emissions standards for all transmitters. That too, could have made it tough for hams, if they had to demonstrate homebrew compliance before regulatory bodies. Moreover, all current homebrew and store bought transmitters in ham radio would have been incompatible with the proposed worldwide emissions standards.

None of the proposals ever made out of working groups, avoiding a major fight on the assembly floor in Geneva. Protecting the rights of hams to repair and modify contemporary gear, and to build and restore vintage radios such as Classic AM rigs now popular on the shortwave ham bands.

It cost the IARU delegation a lot of time and money to keep these measures from being brought before the conference in their original form which might have seen their approval by consensus.

(Via W5YI Report, Newsline)

<*>

Winter Olympics Ham Station

There will be an official special events station on the air from the 1998 Winter Olympic Games in Japan. The station will use the callsign 8N0WOG -- for Winter Olympic Games. It will operate from a venue in the city of

Nagano from February 7th to the 22nd.

And unlike the situation at the summer games in Atlanta, ham radio operators are very welcome in Japan. Any visitor who holds an Amateur Radio license for their home country will be able to operate 8N0WOG from 9:30 am to 9:30 PM local time. The only ID required will be a current, valid Amateur Radio license.

(Via IARU, others)

<*>

IARU Region #3 wants more emergency comms

Region 3 of the International Amateur Radio Union wants a worldwide rules change that will permit more hams to become involved in disaster communications. This, according to a report on the latest Region 3 meeting held in Beijing, China.

There, delegates found that Amateur Radio played a vital role in providing communications during last years earthquakes in India and Japan, the wildfires in Australia, typhoons in the Philippines, floods in Thailand and cyclones in Bangladesh. This has convinced member societies that more effort should be made in training radio amateurs to perform more effectively in these situations. As a result, Region 3 member societies favor changes in international radio regulations in order to relax third party traffic restrictions to encourage the establishment of more on the air training nets.

But Region 3 will face stiff opposition from ITU Region 1. Many Region 1 nations classify Amateur Radio as a sport rather than a communications service. As previously reported, in some European nations hams are forbidden to play any role in providing emergency service communications. With only a few exceptions, that job is reserved for CBers or other designated operators if radio hobbyists are permitted to take part at all.

(Via IARU Region 3 Meeting Notes)

<*>

Glenn and SAREX

Contrary to other reports, Senator John Glenn is not committed to obtaining a ham license before he flies on the space shuttle next fall.

Glenn will be flying on STS-95 in October. That flight will carry a Shuttle Amateur Radio Experiment or SAREX station. And plans are already in the works for some crew contacts with schools in the United States during the mission.

Preliminary talks are underway with Senator Glenn about his taking part in this SAREX operation. Even if he has no interest in obtaining a ham radio license it would be possible for him to take to the air as a third party with the SAREX station controlled by another astronaut ham. If Senator

Glen agrees, he could become an important part of his own civics lesson from space.

(Via Newsline)

<*>

Hams continue aid in iced-in northeast

Radio amateurs are in their second week of helping deal with effects of a record shattering ice storm. In Maine, members of the Central Area Repeater Association were asked to provide communications for Red Cross vehicles delivering food to storm victims. Amateurs were also asked to go door to door to check on people in the Winthrop area.

Vice President Al Gore visited some of the areas hit hardest by the devastating storm. He used amateur radio to talk with Clarence Rider, AA1PN, to get an idea of the storms effects. Gore spoke from the RACES station in the State House in Augusta. President Clinton declared parts of Vermont, New Hampshire, Maine and New York federal disaster areas. Damage is expected to reach into the tens of millions of dollars. Travel remained impossible in many areas.

Michelle Mann, W1GU, is Maines ARRL Section Manager. She says radio amateurs responded to various requests for communications assistance. In areas where repeaters remained off the air, hams monitored 146.52 MHz. She says hams in other areas of Maine assisted local emergency management agencies with communications services.

In Northern New York, the FCC asked amateurs to recognize what it called a voluntary communications emergency. The Commission asked hams to reserve several 2 meter repeater frequencies for emergency messages. ARES and RACES groups were working together, helping the Salvation Army, Red Cross and other agencies.

In Canada, 800,000 people were out of power more than a week after the storm hit. In some areas, the only repeaters on the air were those with batteries or generators. Power companies say it may be February before service is restored to some outlying areas. Full repair to power and telephone networks is expected to take months.

(Via ARRL, Newsline, TWIAR)

<*>

ARRL Board of Directors Meeting

The ARRL says that the League is going after the bad guys in ham radio. This, after Board of Directors meets in Connecticut on January 16th and 17th and create the Leagues' first ever Enforcement Task Force.

The new Enforcement Task Force is broadly charged. Its main goal is to do everything possible to increase enforcement of FCC rules and regulations. This in areas regarding malicious interference, use of indecent or profane

language and other serious offenses.

The task force is comprised of several League Directors, the Leagues general counsel and the headquarters staffer in charge of the ARRL's Amateur Auxiliary program. The Chairman of the Enforcement Task Force is an attorney -- ARRL Second Vice President, Joel Harrison, W5ZN.

In a surprising move, the Board has voted to disband the Public Service Advisory Committee.

The DXCC program will see some changes with the approval of new DXCC 2000 rules. The big change primarily affects newcomers to the program. In the future new countries that are approved but later lose their qualifications to be considered a country will be deleted from the list. As we said, this only affects future DXCC recognition. No one currently climbing the ladder will loose any credit that they now have.

The Board has also said no to two proposed changes the layout of the high frequency bands. One of the motion wanted to move Tech Plus and Novices to the General portion of the CW bands, and, move the phone bands into the present Novice bands. The proposal would also have awarded phone privileges to the Tech Plus class in a limited part of 15 meters. Both were soundly defeated.

The Directors did task the Volunteer Resources committee to explore how the two independent programs amateur radio assistance programs could be expanded nationwide. One is the "E-Mail Elmer" program created by the Miami Valley FM Association in Ohio. The other is the "Get On the Air Program" from New England. Both of these programs are aimed at slowing the large drop out rate among new hams. A feature story on the E-Mail Elmers can be heard later on in this weeks newscast.

For a more in depth report on this meeting we suggest you go to the Leagues's website at:

www.arrl.org

and check the latest bulletins.

(Via ARRL)

<*>

ARRL Audio News

And speaking about the League, word that the recently begun ARRL Audio News has added telephone access in addition to its Real Audio on the web. According to its producer and host Rick Lindquist, N1RL, the telephone access was an original part of the plan:

"We have made it available by telephone. Many members wanted to be able to run it on a repeater but did not have the ability to record the RealAudio on the web.

We had intended to provide this service all along. We finally have the equipment in place as of January 16th. The service is available at:

(860) 594-0384

You should not get a busy signal because there are four lines."

(Via ARRL)

<*>

Over 50,000 Newsline Downloads

And speaking about ham radio newscasts, the numbers are in and Newsline audio is very popular on the world wide web. According to Greg Jones, WD5IVD of Tucson Amateur Packet Radio, his audio server had over 50,000 downloads from its Newsline Audio page during 1997.

Looking at the statistics, Jones says that this means there was actually in excess of 50,000 audio segments listened to. This is because many people access the page and listen to more than one newscast. This may make Newsline the most listened to ham radio audio on the world wide web.

TAPR runs one of several audio sites that provide Newsline audio over the internet. All of them can be reached by links from our website at:

www.arnewsline.org

(Via Newsline)

<*>

AMSAT-NA considers commercial ventures

AMSAT-NA President Bill Tynan, W3XO, says AMSAT may become a commercial operation. This, so as to keep its Orlando, Florida, Lab afloat.

In a January 6th interview, Tynan told the 200th meeting of the satellite and internet delivered Houston AMSAT Net that AMSAT North America needs to keep the Orlando Integration Lab or a facility of that type going. He says that AMSAT North America is looking into several commercial ventures to help fund future projects and activities.

Tynan said revenue from commercial projects would give AMSAT flexibility in pursuing future Amateur Radio satellite projects and additional commercial work.

(Via AMSAT, Houston Amsat Net)

<*>

Brownie Ham outing

A Canadian ham says that he needs your help to demonstrate ham radio to a bunch of young scouts. Lloyd Blazs, VE7LWB, in North Vancouver says that between 20 and 150 girls from Canada's 32nd North Shore Troop of the Brownies and Girl Guides will be visiting his house on February 21st and

22nd. This, to learn what ham radio is all about.

The event is to take place from 10 AM to 9 PM Vancouver time and Lloyd is looking for as many stations as possible to for the girls to QSO with. VE7LWB will mainly operate on 80 and 40 meters but other bands may also included. What bands will depend on band conditions and the number of hams interested in taking part.

If you have some free time and want to talk to these young scouts please e-mail Lloyd as soon as possible. His address is:

novatech@mail.direct.ca

(Via Repeater Owners Remailer)

<*>

Vacuum Tube enthusiasts weekend

A vacuum tube enthusiasts weekend is slated for February 7th and 8th in San Francisco, California. Sponsored by Vacuum Tube Valley Magazine, the Northern California Tube Audio and Enthusiasts Group and the California Historical Radio Society, this two day event offers something for every electron tube enthusiast. For more information contact Vacuum Tube Valley Magazine at:

(408) 733 6146

or check their website at:

www.vacuumtube.com

(Vi press release)

<*>

Mir life extension

The Russian Mir space station may be around a lot longer than previously talked about.

Late news reports say that the 12 year old Russian Mir space station may stay in orbit until the first components of the International Space Station are in place in 1999.

The first ISS units are set to be launched later this year. Hams are scheduled to be among the first crew members to populate the ISS, but the U.S. presence aboard Mir will come to an end this June.

(Via Amateur News Weekly, AMSAT-NA)

<*>

Ham monitors Lunar Prospector

The Lunar Prospector mission has been heard from space by a ham. Dallas VHF operator Al Ward, WB5LUA, says that he has monitored a signal from the recently launched Lunar Prospector probe on 2272.998 MHZ using the 5 meter dish he uses for EME work at 2.3 GHz.

Ward reports he heard the signal January 8th at around 05:00 UTC at 5 to 10 dB over noise with a steady carrier. He estimated that the Lunar Prospector was about one quarter of the way to the moon -- or about 60,000 miles away.

(Via ARRL)

<*>

WD4FAB health update

Some good news on the recovery of Dick Janssen, WD4FAB, from back surgery. According to Craig Mellinger, Dick has increased his walking distance from just short of a mile to a firm pace for 2 miles. Mellinger says that Dick is being weaned from the pain medication and his mobility is improving daily. Mellinger says that Janssen also thanks everyone who sent him get well wishes.

(Via AMSAT NA BBS)

<*>

January VHF Sweeps

The January VHF Sweepstakes opened with a bang on the West Coast with a good six meter band opening at the same time. For many, their first contacts were to the mid-west and south central states. Contacts like this were commonplace during the first several hours:

"... Yea, QSL DM98. Good way to start the contest. Thank you. KC6WFF ..."

According to reports on the VHF Reflector, both six and two provided DX contacts several times during the operating event.

(Via Newsline)

<*>

DX

In DX, word that Thailand station HS1RU now runs the HS/9M Net on 7.060 MHZ daily. The net starts at 13:05 UTC. He is often readable in the United States and has agreed to listen above 7.150 MHZ when the conditions are good before starting the net. QSL via:

JG3AVS
P.O.Box 86
Amagasaki 660 Japan

And the "DX News Sheet" reports that 4Z4DX, and others will be active from Agalega and St. Brandon in May. Callsigns will be 3B7AZ and 3B7/HB9JAI.

The Israel Amateur Radio Club will celebrate its 50th anniversary February 12th. According to Shlomo Mussali, 4X6LM, the IARC will celebrate this milestone with a gala celebration in Tel Aviv. For more information, visit the IARC website at:

www.iarc.org/50

(Via various DX sources)

<*>

The E-mail Elmers Program

Ohio's Miami Valley FM Association has announced its new E-mail Elmer program and its been an immediate success. The procedure allows new or prospective hams in or experienced amateurs in Dayton and Southwestern Ohio who are venturing into a new aspect of the hobby to send an e-mail request for assistance.

For those not aware, the Elmer is a tradition in ham radio. He or she is an experienced ham who provides guidance to those less-experienced. And its working. According to Fred Perinboom, KE8TQ, the Miami Valley club is overwhelmed by community response:

"I was really surprised at the immediate response. Put the thing on the network and we announced it to let people know about it. And bang! We had a response to it right away. That's what we are looking for." Perinboom

Perrenboom says that the E-Mail Elmer program was started in order to fill a void created by the pace of todays Amateur Radio training classes:

"The real heart behind the program is the fact that so many Amateur Radio Operators are going to class, getting their ticket out of that class. They go home with their ticket and that's it. They don't see another ham unless they join a club. It's pretty difficult, as we all know to get affiliated with a club if you haven't been around for a while. So, going back to the way it used to be done, the old Elmer. Everybody had an Elmer. That was where the idea grew, out of that." Perinboom

Hams in the Dayton area or in Southwestern Ohio may use the Elmer Server by sending an e-mail message to:

elmer@febo.com

Users will get a machine generated confirmation. Then, within a few days, they'll get a response from one or more of the volunteer Elmers.

For more information on starting an E-Mail Elmer program in your area, or to volunteer as an E-mail Elmer in Ohio, contact KE8TQ at area code

(937) 256-4355

or by e-mail:

ke8tq@febo.com

Closed Circuit Advisory

Newsline report number 1068 for release on Friday, January 30, 1998 for release on Friday, January 30, 1998 to follow.

<*>

The following is a QST

Canadian hams face major changes in the regulation of their service and bandplans could become law in the United States. These stories and more on Newsline report number 1068 coming your way right now.

<*>

Canada may privatize Ham Radio Service

Canada's Amateur Radio community may soon face deregulation of their service and privatization of the licensing process. This, if Canadian telecommunications regulators proceed with an apparent plan to change the way that the Canadian Amateur Radio service is governed.

Something is up -- but Canada's hams don't know exactly what. For four years, Industry Canada had been considering turning over administration of Canada's amateur radio service to Radio Amateurs Canada or RAC -- that's the country's national ham radio society. But in late 1997 -- as Newsline previously reported -- Industry Canada suddenly pulled the plug on that idea, giving no reason, and leaving RAC caught by surprise.

Industry Canada then began surveying 300 Canadian hams, asking questions about licensing and qualifications. The agency says the results of that survey will help determine the future of Canada's Amateur Radio service.

One possibility -- as mentioned in an information bulletin Industry Canada sent to regional offices, is that hams would be exempted from station licensing. The bulletin says no decision has been made and that hams would remain licensed at least through the end of March, 1999. Canada's amateur frequencies would continue to be regulated.

All this may give a hint of what's in store for Canada's hams: privatization!

Industry Canada is considering privatizing licensing of the service, by turning the job of issuing callsigns over to some other entity. Which group that would be is not clear, but it may not be RAC. Industry Canada also says administrative fees would be permitted to be charged.

If Canada does decide to shift licensing to another group, current testing of candidates would continue as would the nation's four tier licensing system. Only the administration of licensing would be privatized.

One issue to be resolved if Industry Canada goes ahead with the change is that of its effect on bilateral and reciprocal agreements. Industry Canada says that -- before moving ahead with exempting Amateur Radio from licensing -- it will examine all standing reciprocal agreements and re-negotiate any as needed.

RAC opposes the plan and says Industry Canada's poll could not possibly be representative of the nations 45,000 licensed ham operators.

What effect the possible privatization of the Canadian Amateur Radio service might have on the way the FCC looks at the administration of the United States Amateur Radio Service remains to be seen.

(Via RAC, Newsline, others)

<*>

Oracle reacts to WRC

Oracle, the New Zealand based group that proposes elimination of mandatory Morse code testing on a world-wide basis is not waiting until the year 2001 or later to get CW abolished. According to a number of Internet postings, Oracle has written letters to member nations of the International Telecommunications Union. This, to remind these ITU members of their promise at WRC '95 to review the mandatory Morse testing requirement as outlined in International Radio Regulation S 25 at the 1999 World Radiocommunications Conference.

Oracle is urging them to support its elimination of Morse testing from the ITU treaty at that time. The society appears to be trying to build support for the elimination of S 25 by getting member nations to include its elimination from the treaty in their WRC 99 position papers and conference agenda recommendations.

(Via Internet)

<*>

Mandatory bandplanning

Strict adherence to what are now voluntary bandplans could become federal law. This, as the ARRL Board of Directors faces the growing problem of FM incursion into what is traditionally non FM spectrum.

Rather than let it reach epidemic proportions, the Board says that the ARRL will ask the FCC to put teeth into the voluntary band plan concept. The League wants the Commission to issue a declatory ruling. One that says any operation that conflicts with established, voluntary band plans and causes interference or adversely affects others operating in accordance with applicable band plans is not good amateur practice. As such it should be considered a rules violation.

The Leagues plan is designed to permit growth and changes in ham radio by not codifying any particular current bandplan as the rule for all times. Rather, it wants the national bandplan accepted by the majority of the nations hams at any given time to be the one that the government also accepts. This means that as new modes and interests appear and replace the older ones, that the established national bandplans can evolve. This, without the need for ongoing or periodic government review.

Such a ruling would go way beyond protecting weak signal and other VHF users from being harassed by FMers. It could also be applied to problems on the high frequency bands where specialized modes which also need protection tend to collide with mainstream SSB and CW. Whether or not such a ruling will be issued is up to the FCC.

FCC investigates local 1570 & 1610 kHz broadcast operations

The FCC has conducted field investigations on two unlicensed Southern California AM broadcast stations and has satisfied itself that these are

not illegal operations.

The stations in question operate on 1570 kHz in Tustin and 1610 on kHz in Garden Grove. The CGC Communicator reports that Paul Oei of the FCC's Compliance and Information Bureau in Los Angeles examined the Tustin station some time ago and gave it a clean bill of health. He recently inspected the Garden Grove operation and reinspected the Tustin location. Again he came to the conclusion that being both stations appeared to be radiating no more than 100 milliwatts and therefore are in compliance with Section 15.219 of the FCC Rules. Section 15.219 covers intentional radiators operating in the 510-1705 kHz band.

(Via FCC, CGC Communicator)

<*>

NAL issued

Meanwhile, fines against broadcasters continue to roll out of the FCC's in Washington.

The FCC is continuing its crackdown on those it says are violators of the broadcast service rules. In one of its latest actions, the regulatory agency has ordered Hampton Radio II, Inc., the license of WBYM AM, in Hampton, Virginia, to forfeit $10,000 to the United States. This for what the Commission alleges to be willful and repeated violations of the Communications Act and the Commission's rules.

This Mass Media Bureau action was adopted on December 9, 1997 by an FCC Memorandum, Order and Opinion but only recently came to light. Hampton was expected to file an appeal.

The FCC began its latest crackdown against alleged broadcast rules violators early last year.

(Via FCC Release)

Wisconsin mobile operations bill

A bill introduced in the Wisconsin state legislative could have implications for ham radio mobile operators.

The measure is Wisconsin Assembly Bill 680. It states in part that "No person while driving a motor vehicle shall be so engaged or occupied with the use of a mobile telecommunications device as to interfere with the safe driving of such vehicle or as to impede the normal and reasonable movement of traffic."

The bill has had a first reading and has been referred to the Wisconsin State Assembly's Committee on Highways and Transportation. A lot more work on the part of legislators is needed before the measure is reported out of committee to the legislature floor.

While primarily at cellular telephone users, Wisconsin hams are keeping a close eye on the measure to make sure ham radio is not adversely affected.

We will be following this story as the bill winds its way through the Wisconsin legislative process.

It's Thomas for Wolf aboard Mir

After some orbital tailoring to fix an ill-fitting spacesuit, the last U.S. Astronaut to serve on Mir has been transferred to the aging Russian space station. Australian-born Andy Thomas, KD5CHF who also holds the special callsign VK5MIR has replaced astronaut David Wolf, KC5VPF who has lived on Mir since last September.

Thomas blasted off from Kennedy Space Center Thursday, January 22, aboard the shuttle Endeavor. Before the launch, the Australian government issued Thomas a reciprocal license and the special event call sign for his use while aboard Mir. Thomas is from Adelaide in South Australia but it's not yet known how active Thomas will be on the MIREX radio.

KD5CHF will work aboard Mir until June, when the shuttle Discovery will dock with Mir for the final time. Discovery will pick up Thomas and return him to Earth, ringing down the curtain on the Russian and American cooperative MIR mission.

<*>

RS-12 NEWS

Pat Gowan, G3IOR, reports that the Russian RS-12 satellite has been placed in Mode KA. This is 2 meters and 15 meters up with 10 meters as the downlink. As a result of this change, look for increased activity on RS-12, particularly among ground stations without VHF radio equipment.

G3IOR also says that RS-12's robot 15 meter uplink suffers from an unexplained deep signal fade that has a period of about four seconds. This phenomenon is seen only on through the robot, and not when operating through the analog transponder.

True Speech Newsline feed ends - RealAudio continued

Newsline audio in True Speech format is no longer available on the World Wide Web. Bill Levey, WD4FAT ceased operation using True Speech audio streaming in early January.

The True Speech Internet version of Newsline made its debut on the web in November, 1995. It was one of the first such services. For more than two years, AAE Bandmaster and First Frame Video provide Newsline broadcasts on the World Wide Web as a service to the amateur radio community. However, due to a continuing lack of financial support, WD4FAT has been forced to make the decision to cease operations. Our very sincere thanks to Bill Levey, Bandmaster and First Frame Video for their volunteer effort the past two years.

At this time we should add that Newsline audio has not left the World Wide Web. Distribution of Newsline in RealAudio is at the audio web page hosted by Tucson Amateur Packet Radio. An Internet Wave version is at the site hosted by Hank Armstrong here in California. Both are reachable by direct links from our website at:

www.arnewsline.org

>Okay, Jeffy. Your turn now. How do YOU do it. I want to hear how a real
>professional converts a radio. I'm taking notes...

I'm a hobbiest, not a professional. Having said that,
I exchanged one crystal; replaced a 10.xx MHz with a junkbox 10.yy MHz.
Peaked that xtal oscillator stage, and the PA stage. Output of channel
one was now 28.01 MHz. Then I had to decide which stage to key (rig was
to be used for CW, of course) - no schematic so used trial and error -
looked for voltage changes with the keying of the PTT. I decided to
key what I thought to be the B+ to the driver stage - no chirp! Happy
days. Then I built an outboard BFO for the rcvr (used an old IF trans-
former), but in the end decided to use a seperate rcvr.

Total cost, including original radio: $0.

Radio sits unused due to having been given a Galaxy GT-550 - 360W on
10m CW. Perfect for calling CQ on top of the illegal outbanders (deemed
not to be "intentional interference" by the FCC).

While I hate to have to agree with him, our friend Rambo is 100% correct. Test purchase or not, if a dealer in merchandise attempts to set his own rules regarding who he/she will or will not sell a radio

transmittng device that is unrestricted t public sale, then he or she can be sued for restraint of trade. The case law exists in (I belive these are the correct names) Cooper/Communications Attorney Service vs.Western Hobby Radio Distribution; Cooper/Communications Attorney Service vs. Burbank Radio Supply -- and others -- all circa 1977 to 1979. (If anyone has access to WestLaw or Lexxus/Nexxus you might want to look them up.)

Since most of you are new to this area of radio, the Communications Attorney Service was a prepaid legal group and Washington lobbiest for the 11 meter Class D Citizens Radio service that first appared in early 1976 during the so-called "CB craze of the '70's." For $25 (later $50) a year they offered prepaid legal services to represent CBers' who ran excess power, out of band, etc. The also lobbied for the transfer of all maritime and amateur service bands to the Citizens Radio Service. I have tapes of their founder speaking bfore the FCC and before various indusry groups.

CAS evenually was dubed a "scam" by the Calfornia State Assistant Attorney General for Cosumer Fraud Herschell Ekins, but by that time it had amassed over $100 million (estimated by Elkins) which Cooper disappeared with. However, the case law thart Cooper / CAS developed ansd successfully litigated has stood the test of the courts and the test of time.

Also, you can check doirectly with the Department of Commerce. Unless things have changed signifigantly in the last two years, it is a violation of federal law for a retailer to require a special level of knowledge/competance to purchase any non-government-controlled item. Or, as explained to me for an article I wrote on this subject -- one need not be a doctor to buy a stethoscope -- a pilot to purchase an airplane or a licensed radio hobbiest to purchase an amateur radio transmitter. Rather, the responsibility is on the purchaser to use it properly and -- most of al -- legally.

Again, all of this exists in case law -- both d\federal and California state civil. Plase do not take my wor for it. Rather, do the research yourself and you wll find what I have -- and that it has been this way for at least 20 years.

Now -- the real question is -- should we as radio amateurs seek to change it and if so, how do we go about it? Any ideas???

de Bill Pasternak, WA6ITF

>but rather its perceived need.

Indeed, my statements are technically correct. Signaling is a technical
subject, no other basis is rational for its discussion. There are irrational
and emotional forces at work which attempt to defend OOK Morse on the
basis of technical superiority, IE the "Morse gets through when nothing else
will" camp. Their position is without merit. There are also those who argue
that Morse is superior because it can be used with simpler and cheaper
equipment. When examined closely, that position too is without merit.
VLSI has made cost and complexity arguments moot. The added level
of cost is negligible, in fact cost is lower considering the human time cost
of conditioning the wetware modem. And as to complexity, no machine
decoder we can build approaches the complexity of the wetware modem,
yet the machine decoder offers superior and more reliable performance.
Better performance at lower cost is the hallmark of a successful system.

>Beyond this point on the page, Gary, mostly what follows may be
>classified as "ranting and raving" and not necessarily direct response

>to any particular posting. So, to continue...

I would expect a defender of OOK Morse government mandates to
"rant and rave", emotional posturing is the last refuge of those who
have lost the debate on its merits. But proceed on, lets see if some
rational light can be shed on mystic beliefs.

>One perspective of that perceived need is rather apocalyptic
>anticipating a time when societal structures and standards have
>collapsed. As irrational as the apocalyptic perspective may sometimes
>become, it serves to establish a fundamental level of concern. That
>concern is that like bio-diversity, whatever is lost can never be
>recovered when the need arises.

Unfortunately for that argument, the Morse genome has been fully mapped.
It can be revived at any future time should a need appear. Discontinuance
of regular testing for amateur licensing does not eliminate full knowledge of
Morse coding. Anyone at any time can still take it up and condition themselves
to respond to it as thousands of Boy Scouts have done over the last century,
from a book, should a real need arise for its rebirth. As you point out, that
need is extremely unlikely, and certainly there are alternative codings which
are superior to Morse which could be revived instead. (Morse is not particularly
well formed. Information theory has taught us how to design codes which are
much better, even if used by hand and ear.)

>CW presents a form of code, encryption, digitization,
>whatever-you-may-call-it, that is commonly available throughout the
>world. When I say commonly available, this can be as literal as
>hearing someone define it. This constitutes an Oral tradition. It
>already has a protocol associated with it that is its own lingua
>franca (the Q code). This code requires no supplementary equipment to
>interface it to the user. Even more important, is that this code and
>protocol can be carried in your head, and practiced by hand. Being a
>primitive mode, it is not restricted to electrical transmission
>(lights, bells and whistles work as direct replacements within the
>constraints of range), nor does it require complicated
>synchronizations.

Nor do a number of other codes with properties superior to Morse.
And any wireless transmission system requires supplementary
equipment, we are not equipped to directly generate or sense RF.
The part required to utilize more robust codings is only a minor
part of that total equipment set today. In fact it could be built into
radio equipment today with negligible impact on cost (and in fact
is in the case of some non-amateur equipment, and even some
amateur equipment, witness the GRAPES 56 kb RF modem).
As to usages outside the sphere of radio signaling, that's not
relevant to amateur radio licensing. But even there, there are
more robust codings which could be employed, and have been
employed, witness the Prisoner's Code, and the semaphore
code.

>As the mind is the ultimate signal processor,
>interfering signals are managed with far greater sophistication than
>the best digital techniques that require co-operation. This is not to
>say that the mind can outperform digital processes, rather it says
>that in an uncooperative, chaotic state, the mind will recover more
>data than a digital process.

This latter is incorrect. Machine codes can, and do, operate against
uncooperative and chaotic backgrounds which totally defeat the
human mind/ear. The coding systems used by Voyager, Galileo,
and the Navy's ELF network are examples, as are the spread
spectrum codes used at HF and VHF+ by the military to prevail
against an intelligently hostile jamming envirionment. No manual
OOK Morse operator can succeed in such hostile environments,
but machine digital methods routinely do.

This is merely a restatement of the old Morse Myth that Morse
gets through when all else fails. It doesn't. If it did, the military
and NASA, who need the utmost in performance against hostile
signaling environments, would still be using it. But neither does.
And the better codes allow use of less power which reduces
overall mission costs in a number of different ways.

>However, even here my apologia leans too heavily on a technical
>rebuttal. The proper response should be couched in terms of the
>bio-diversity allusion. The real world demonstrates total disregard
>for issues of bio-diversity everyday, so how does this allusion impact
>this discussion? For those very reasons of disregard. Just as the
>passing of a genome from our genetic pool is an irretrievable loss, so
>is the lost knowledge of a process an erosion to our cultural memory.
>As the commercial world discards this mode, it is OUR RESPONSIBILITY
>to maintain it. This is a REQUIREMENT OF OUR CULTURE, or our culture
>is meaningless and renders us as merely a class of technical
>hedonists.

This is the most absurd nonsense. As noted above, the Morse coding
system is fully documented. It cannot become lost unless those documents
are lost, which is highly unlikely indeed since they are extremely widely
dispersed in every encyclopedia, Boy Scout Handbook, historical text
on coding and signaling, etc. Only if the ability to read were lost could
knowledge of Morse be lost, and then it would be a moot point anyway
since Morse's purpose is to convey alphabetic text.

No on-going historical re-enactor group is required to maintain knowledge
of the coding system. Do we moan and wring our hands that people today
no longer construct Leydon jars? No we do not. The knowledge still exists if
there were some reason to build one. A Leydon jar constructor's society is
not required to keep the knowledge alive by constant re-enactments. Nor is
there a need for electrical workers to pass a speed test in Leydon jar
construction. Better capacitor designs exist, we use them instead. But we
have lost nothing of importance as a result of using superior methods.

>The stumbling block of this discussion also lies outside of the
>technical discussion. That block is the practice of selective
>discrimination against non-code operators.
>
>That block should remain. For a culture, it serves as a necessary
>rite of passage. It fosters the education of our oldest and venerated
>mode. Through the restrictions of the band plan it fosters its use.
>As a distinction in one's standing within the culture, it should be
>retained as a requirement for advancement.

This is nothing more than religious/mystic argument. Now it is true that there is freedom of religion in this country, but it is equally true that there is freedom *from* religion in this country. Our goverment is supposed to be secular, and not promote a particular religious/mystic view. To embed mystic beliefs in regulation is wrong and outside the legitimate scope of government. Rational secular purpose must be shown for usages of government power. Government should not be permitted to abuse secular power to promote mystic beliefs and rites. That is the province of the church and other mystic orders.

If groups such as the ARRL and FISTS wish to perpetuate mystic rites of passage and other mythic pseudo-religious beliefs and activities as a voluntary matter, they have the right to do so. But under our system of government, they are not supposed to have use of the power of government to enforce those mystic beliefs or rites of passage on others as a price of access to public spectrum. That would be like forcing someone to convert to Catholicism in order to enter a section of a public park. It is a non-rational and non-secular requirement.

>However, as a segregating
>principle insofar as HF/VHF privileges, this is not a cultural
>necessity, but rather a legalism. That legalism, in light of today's
>practices, has been rendered meaningless and serves only political
>goals.

Indeed, it is the embodiment in law of a mythic/mystic belief which has no place in secular government. And it serves to perpetuate the vested interests of a particular class of citizens in the clearest NIMBY terms.

>This block then should be revisited to remove not the cultural mode
>but rather remove the outdated legal restrictions. In fact I would
>open the floor to discussion of Amateur Radio acquiring title to the
>entire HF domain. Where there are existing commercial services in
>use, they can share with us as a secondary user on a mutually
>non-interfering basis. I'll trust that Hams will honor their rights
>more than they would observe ours. This band-grab could not come from
>our own efforts, as we are barely able to scrabble for what spectrum
>we have. No this move would have to be patronized. It is incumbent
>upon the governments to grant us this spectrum as THEIR OBLIGATION to
>aid our support and fostering this mode; to encourage public
>participation; and to hold the spectrum in the Public Domain.

This also is absurd. Spectrum is allocated on the basis of how the public interest is best served (at least in theory, and to a considerable extent in practice as well). That public interest is primarily measured in economic/monetary terms, as well it should be since money is the counter used to measure human activities and values in bulk terms (Economics 101). Amateur radio is a very small contributor to human activities and values. It receives a disproportionate share of spectrum in relation to that value today. The idea that it could make economically more important interests take a secondary role flies in the face of rationality.

>Aside from that last wild fling of imagination, CW policies involving
>discrimination should be examined at all levels, not removed.
>Priorities may change over time, but what society discards it's
>heritage?

Society has discarded the buggy whip and the starting crank. Society has discarded many things which are no longer relevant to modern life. Attempting to carry the past's baggage beyond a reasonable point is counterproductive. It prevents the acquiring of more pertinent current and future burdens because of the limited carrying capacity of individuals and society. We need not regurgitate phylogeny. We can stand on the shoulders of the giants who have gone before us and not have to repeat their struggles.

That does not mean that we should forget the past. We must learn from the past's mistakes and successes so that we will not repeat those mistakes or fail to improve upon those successes. And we do so when we observe the deficiencies of past signaling methods and adopt improved methods to supercede them based on the work of people like Nyquist and Shannon and a host of others who have shown us the way.

We have to learn to bury our dead and turn our faces toward the future. That's where *we* have to spend the rest of our lives. Trying to re-enact the daily lives and exploits of our ancestors over and over will not bring them back to life. We have to move forward. To adopt your biological metaphor, all life is evolution and change. A static system is a dead system. Adapt or die is the law of Nature.

Since your Telephone is clearly *not* a radio, there must be something defective about it to allow it to recognize a radio signal. Contact the telephone manufacturer to report the defect; many have standard "fixes" that will take care of the defect (they don't automatically install these corrections in all their products because it would make them more expensive).

The cable t.v. problem is similar. Think of your cable as a pipe in your home. No water should leak out, and no contaminants should leak in, either. If you turn on your cold water tap, and get muddy water, you know that there is something wrong with the PLUMBING, not the earth! Call your cable provider to report the problem. Like your telephone manufacturer, they would rather do nothing , so you will probably have to keep after them.

"Couldn't these problems be the fault of the guy with the radio, using too much power or something? I figure it must be his fault because I didn't have a problem until HE started transmitting!" This is the most common reply/ reasoning given by a person experiencing the unwanted interception of radio signals. The key word here is "unwanted." Many folks buy shortwave radio and scanner radio sets just for the purpose of intercepting other folks private communication. So lets just repeat, a radio is supposed to transmitt: a telephone is not a radio, and should not intercept radio transmissions unless there is something wrong with it. Likewise, you shouldn't have mud in your water if the pipes are not broken.

Its no fun, I know, but fixing these problems will be up to you. Because these are fairly common problems, you will find that the fixes are pretty common, too. Radio Shack, for one, sells filters that can be put into your phone lnes, and at the hand set, to remove radio signals. Cable t.v. can be more complex, so leave that repair to your cable provider. While you'e waiting, though, you can do some things to investigate.

Got any extra goodies attached to the t.v.? Perhapsan unauthorized second set tap? Maybe a "Rabit" retransmitter? Outboard speaker system? Multiple v.c.r.s? During a period when you are experiencing the unwanted reception, try disconnecting the extras one at a time. You may find the culprit to be in your home set-up! In my experience the primary offenders are v.c.r.s.

If you find the problem to be a device in your home set-up, you will still need to follow up with the device's manufacturer to get it fixed. Or, check back here for some tips on what you can do yourself.

I agree that testing for code proficiency has seen it's time, but it certainly should not be a barrier to anyone wanting to get a license or upgrade. Hopefully in the future, the requirement will be replaced by something more revelant to today's technology, but for those who refuse to obtain a license or upgrade because of the requirement are just lazy whinners who are of the current generation that want everything easy and handed to them, like CBDumbo. The requirement is there, and until it is removed, that is the way things are, and if anyone is too lazy or stubborn to learn a little code, then they just have very little desire for a license or upgrade. I have no sympathy for such persons.

> and zeros.

In binary, there are only two states: on and off, commonly
called one and zero, respectively. CW is not really binary because it
does not have only an on and an off. A digital mode has discrete
states. A binary mode has two discrete states, on and off.
CW nominally has four discrete states. These are: "dit" (on
for a short time); "dah" (on for a long time), "inter-character space"
(off for a short time, same time length as a dit); and "inter-word
space" (off for a long time, same time length as three dits).
When I listen to someone sending with a straight key, I
usually hear four distinguishable sounds: a short beep, a long beep, a
short pause, and a long pause. Within a single transmission, even
when the sender is using an electronic keyer to regularize the dit,
dah, and inter-character space, I hear the inter-word space varying
widely. Thus, CW as I hear it come across the HF bands is an analog
communications form. CW happens to be an analog communications form
which has a lot of punch and is understandable even in the midst of a
lot of noise, and it happens to consume a very small amount of
bandwidth, and it can be generated and received with a minimum of
circuit technology, but it is still technically an analog
communications.
Part of the concept of binary communications, and of all
digital communications, is that there is a synchronizable clock
running at both ends of the transmission. In a binary digital mode,
During any clock tick, there is either a one or a zero. In a
non-binary digital mode, during any clock tick there is only one
discrete value for the duration of the tick. These time ticks are
organized into a frame, usually with some leading and trailing ticks
of predictable value to help the receive keep its clock synchronized
to the transmitter. CW, whether sent using a straight key or an
electronic keyer, fits none of these definitions. CW is not a digital
form of communications.
BTW, I think there is a strong argument for coherent CW, which
does have a fixed speed (about 13WPM), has an underlying clock (with a

defined period of 100ms for the dit and thus for all four states), and thus has the unique property of being the only digital mode (at least the only one I know of) which can be readily decoded by both unassisted humans and by machines.

>thought CW was digital. There are only two levels, off and on. Ones and zeros.
>The timing is not quite as accurate as a clock in a computer but may be
>more flexible.

There are two separate things here. The modulation method commonly used
to convey Morse is OOK AM. That is, On-Off Keyed Amplitude Modulation.
It is an extreme form of AM modulation in that its negative peaks drive the
transmitter all the way to cutoff, but it is AM nonetheless. The modulation
is contained in the AM sidebands as with any AM transmisson. Since the
rate is typically very low, the sidebands are very near the carrier. We have
difficulty perceiving this directly by ear because the modulating frequencies
are below the normal low frequency limit of our hearing at the code speeds
typically used. So we use a special decoder circuit called a product detector
to remodulate this baseband, creating a MCW tone sequence product that
we can hear.

(Note that if we sent very fast, the modulation sidebands would come up
into the audible range, and we could hear them directly from the AM envelope
detector. They'd sound just like the clicks we hear from our hand key when we
are sending, but of course at a vastly higher rate such that they'd sound like
tones of different pitches for strings of dots and dashs. A machine decoder
can directly process the low frequency baseband from an AM detector and
doesn't need the product detector to receive OOK, but we typically don't do
it that way because of the frequency rolloff characteristics of our analog
receivers' audio sections.)

Now the coding is in the baseband waveform used to modulate the
transmitter, IE the waveform you'd see if you monitored the output
of your key on an oscilloscope. This is a *timing* code which encodes
information based on the timing of the interval between the rising and
falling edges of the state transitions of the baseband signal. While the
baseband only has two states, the timing code has five, the dot duration,
the dash duration, the intracharacter space duration, the intercharacter
space duration, and the word space duration. So Morse is not a binary
code. It is a quintenary code with five distinct symbols derived from five
distinct timing intervals and states.

Now this is one of the problems with Morse Code. The work of Nyquist and
Shannon has shown us that a code having more than two symbols requires
a better SNR to be successfully decoded than a code which only needs two
symbols. And to make matters worse, only two of Morse's five symbols are
voiced by OOK, so only 40% of the code is actually transmitted from one

station to another. This costs us 10*log(2/5) or 3.979 db at the receiver. (The other three symbols are *inferred* against the noise background by the apparent absence of signal.)

There are other deficits. Because the code doesn't use uniform symbol lengths, a matched filter cannot be created to receive it. That costs us more SNR margin. And because the code isn't fully voiced, we can't use an orthogonal decoding matrix for it, and that costs an additional 3 db. So OOK Morse gives away enormous SNR advantages when compared to a fully voiced binary coding conveying the same information rate. That's why a fully voiced binary coded signal can always beat OOK Morse in a harsh noise and interference environment. And that's what is used by radio services which absolutely must get the message through under the severest of conditions.

Under less severe conditions, Shannon's information theorem tells us we can trade excess SNR capacity for a higher information rate. And that's what digital signaling systems do when conditions are not extremely harsh. Unfortunately, human by hand and ear operators can't take advantage of that because they are extremely limited in the sending and receiving speeds they can achieve by human limits on dexterity and by ear decoding.

(Note, the human visual system has 10,000 times the bandwidth of the human aural system, so it can process information much faster than an operator can by ear. So systems which present information visually are vastly preferred to those limited to an aural presentation. That's why TV (and reading) can be so absorbing. It is engaging more of the mind's capacity to accept information than does radio. Of course the content of the information has to have some value, dreck is dreck no matter how it is presented.)

You don't think it could have been because of your 'extremely positive, agressively ready-to-learn attitude' that you have expressed so well on this NG that did it, do you, rather than just your 'license class'? How many other Techs you suppose are getting these invitations to return to CB? I can assure you, only a few like yourself. You earned them, guy. You reap what you sew. Don't blame it on your license class. Sorry.

yeah, pro-CWers are selfish, support dictatorship and unwelcomed by
many people.

Good for you. You're a very innovative person. However, No-code
International wants to discontinue manditory code *testing* for access
to HF.

I don't know if this would work or not. I would think that the courts would side with the FCC in the fact that they have a right to determine what qualifications must be met before issuing a license. As long as those qualifications don't violate the constitution or other federal law, they can set whatever standards they want.

When you think about it in this way, the FCC could set a code requirement at 100 wpm and no one would pass it. This would give them an excuse to auction off spectrum to the highest bidder.

some will pass it. some will pass and they will be lonely "dahs" in
their ham shack... and they say 100 WPM makes good hams and keep
amateur radio. they will be proud of it while others don't care...
they will eventually die when they lose their bands... and when they
die they will complain to the ones who don't possess 100 WPM... and
whatelse...

SB DX @ WW $OPDX.342
Ohio/Penn DX Bulletin No. 342

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 342
BID: $OPDX.342
February 2, 1998
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 440-237-8208 28.8k-1200 Baud 8/N/1 (New Area Code!)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, WB2RAJ/WB2YQH & The 59(9) DXReport, K4TSJ, WA6AXE, AA8LL, EA4DX, F6AJA & LNDX, G4BUE & DX News Sheet, G3XTT, PA3DZN and 9A2EU for the following DX information.

4KA/4JA, AZERBAIJAN. The French DX Bulletin LNDX states that from January 15th through December 31st, the stations from Azerbaijan may use the prefix 4KA and 4JA instead of 4K and 4J. The Radio Club from Baku may use the 4K80ADR (Azerbaidjan Democratic Republic) for celebrating the country's 80 years of independence.

5H, TANZANIA. Dave Heil, K8MN, currently signing OH2/K8MN from downtown Helsinki, informed OPDX this past weekend his next assignment (and last before he retires) will take him to Tanzania. Dave and his wife Leila will leave OH-land in July. Then they will spend several months in the U.S. before they travel to Dar Es Salaam in early autumn. Dave hopes to receive a callsign ending with "US" or "MN" once again. This will be their fourth African assignment. Dave has been active as J52US, 9L1US and A22MN.

8P, BARBADOS. The "DX News Sheet" reports that Martyn, G3RFX, will be active February 2-16th as 8P9FX from Christ Church. Activity will be on CW/SSB, mostly 40 and 20m with some 17 and 15 meters. More information can be found at: http://ourworld.compuserve.com/homepages/g3rfx
QSL via home call.

9M0C DXPEDITION UPDATE. OPDX InterNet Subscribers will receive an additional bulletin containing the complete press release by the Chiltern DX Club (CDXC) and The UK DX Foundation. Meanwhile, the Spratly Islands DXpedtion is on track and will take place February 12-24th. Much of their equipment has already reached the Layang-Layang Island to await their arrival. It has been reported that Aki, VK2BEX, has had to withdraw from the operation, but was replaced with three operators. The new operators are: John Krzymuski, N2QW (ex-AB2EC); Jeff Morris, 9H1EL; and Kazuo

Ogasawara, JA1RJU. They will now have 13 operators. For updates, check out the WEB site: http://members.aol.com/spratly98

9N, NEPAL. Vladimir, RU6FP, is now active as 9N1FP for the next 4 months. His activity will be mainly on CW, and his license only permits him to be active on 20 and 40 meter. Check 14002 kHz around 1230z and 7005 kHz between 1200 and 1330z. QSL via RU6FP.

C6A, BAHAMAS. Look for Wade, AA8LL, to be operational as AA8LL/C6A from Crooked Island (NA-113), February 2-4th. Activity will be on the IOTA phone frequencies from 40-10 meters. QSL to home call, AA8LL.

CN, MORROCO. Look for F5LMK to sign as CN/F5LMK from May 9-16th. He will be active on SSB from 80-10 meters.

DXAC NEWS. The newly elected Great Lakes Division Director, Joe Falcone, N8TI, has selected Ted Pauck, K8NA, to replace Tedd Mirgliotta, KB8NW, as his DXAC representative. Ted is not new to the Committee. He was on the DXAC perviously (1991) before KB8NW and also served as DXAC Chairman. Tedd, KB8NW, will stay on in the Great Lakes Division as an Assistant Director.

FT5W/FT5X/FT5Z, CROZET/KERGUELEN/AMSTERDAM ISLANDS. Rene, FR5HR, currently active as FT5X/FR5HR from Kerguelen until the end of February, states he is not sure if he can activate the other place (FT5Z and FT5W).

FT5X, KERGUELEN ISLANDS. Elios, FT5XN, states he listens regularly for NA stations between 0300 to 0500z on 14209/14031 kHz and between 1300 to 1400z on the same frequencies. It was also mentioned that the Clipperton DX Foundation sent him an amplifier, and he should receive it soon. Elios knows, FT5X is really most wanted on the lower and WARC bands, that is why he promised to build dipoles for those bands as soon as possible. QSL via F6PEN: Ribes Gerard, 16 rue Viollet Leduc, 31100 Toulouse FRANCE.

J47, GREECE (Special Event Station). The Radio DX Group of Thrace will operate the special event station J47XCF from February 1-28th. This station will operate during the "Xanthi Carnival Festival 1998" which is part of the "Thrace Folk Festival 1998." This station will operate on all modes and bands. They report that contacts will be confirmed with a beautiful QSL card which will picture the official carnival poster of the city Xanthi.

KH4, MIDWAY ATOLL. The 59(9) DXReport states Ted, NH6YK, may be active from here March 18-29th as NH4/NH6YK (he now has an Advanced license).

KH9, WAKE ISLAND. The Dateline DX Association follows its September, 1997, North Cook operation by announcing a return to Wake Island (KH9) with dates on the island for February 26th through March 11th. This operation follows a successful 1996 Wake operation and its emphasis will again be on EU and the low bands. With upbeat conditions, other areas should enjoy good availability almost around the clock. They intend to complete the needs for those who may have missed it earlier.

Operators will be Tom K8XP (ZK1XXP, AL7EL/KH9, V7/AL7EL); Bob N2OO (9M6OO, V85OO, V85OM, XX9OO); N6MZ (VK0IR, ZK1XXP, SV5/N6MZ); and Bill N2WB (KG4WB). Four stations are planned with directional antennas for 10 through 20 and verticals for 40, 80 and 160. Special efforts on RTTY will be handled by N2WB. N1DG will again do the website.
This operation comes very soon after the North Cook operation and the chance to return was unexpected. Because they did not want to pass up the opportunity to again activate Wake, they are going under less than satisfactory financial circumstances. Any donations would be greatly appreciated and can be forwarded to: The Dateline DX Association, Robert Pond, 9 River Cove, Portsmouth, VA 23703. Calls to be announced at a later date. QSL to Robert Pond WA4YBV, 9 River Cove, Portsmouth, VA 23703.

NEW IOTA. Ibrahim, 7Z1IS, reports to OPDX that he will activate Tarut Island for the first time. His operation began on January 30th, but it will last until February 4th. Tarut Island is IOTA AS-111 and is located in the Arabian Gulf Group. He will sign 7Z1IS/P on the IOTA frequencies on 40-10 meters. There are two ways available to QSL: 1) via QSL Manager SM0OFG. 2) Direct to Ibrahim address: Ibrahim Saud, Po.Box 3361, Al khobar 31952, Saudi Arabia (IRC's are not accepted in Saudi Arabia, PLEASE use one green stamp).

P4, ARUBA. Operators Carl/AI6V, Rusty/W6OAT and Paolo/I2UIY, will be active from February 15th to March 15th, as P40K, P40V, P49V and P4/I2UIY. They also plan to be active in both the CW/SSB ARRL DX Contests and also the CQ 160 Meter SSB Contest.

QSL INFO AND NEWS.....
OPDX has received some conflicting reports on what stations Michel, HH2HM, is QSL Manager for. In OPDX.341, we reported Michel stated he was the QSL Manager for BA4TB and HH2PK. But according to Zlatko, 9A2EU, the only QSL route for BA4TB is via 9A2AJ. 9A2AJ has all the logs for Deal, BA4TB, and this is the only correct QSL route. Also, HH2PK states he DEFINITELY does not know F/HH2HM .. nor, does he have F/HH2HM as his QSL manager. It is suggested at this time to QSL directly via his Haiti address.

Roberto, EA4DX, states: "Now that 8Q7AA has finished its operations from the Maldives (Good job guys), just a reminder that there are a couple of thousand QSOs (2000) not requested in my logs for 8Q7XX last September. The 8Q7XX QSL is a full colored, "U.S. quality card". You can find it on the Maldives 97 Dxpedition site:
http://www.qsl.net/ea4dx/8Q7XXqsl1.htm
There is no backlog of QSLs, so same day return card is the average.
QSL guidelines for direct and E-mail bureau QSLs can be found in:
http://www.geocities.com/TheTropics/Shores/4909/8Q7XXqsl.htm
Log search on line at: http://www.qsl.net/ea4dx/8Q7XXlog1.htm
Any questions please E-mail me direct..." 73 Roberto Diaz EA4DX :-)
Roberto's E-mail address is: rdiazg@nexo.es

S7, SEYCHELLES. Kurt, S79MX, announced that he has obtained special permission to operate on 80 meters. This is only for two weekends in February. The following days have been authorized: Friday, February 13th from 0000z through Sunday, February 15th 2400z and Friday, February 20th from 0000z through Sunday, February 22th 2400z. The frequency to be used will be 3508 kHz (+/-). Using only 100 watts, Kurt will maximize his presence on 80m during these time frames to give as many as possible a chance to work this rare 80m DX.

SLIM REPORTED. The 59(9) DXReport states that Mehdi, F5PFP, reports he has confirmed with French Radiocom Service that no license has been issued to the 16 person crew on the 1997/98 mission to ST. Paul & Amsterdam Island. Therefore, FT5ZH is definitely Antarctic Slim!

T48, CUBA. Members of the No-Name Dx-Group (VE3ESE/Don, VE3NXB/Greg and VE3NQK/Gord), as well as many of the Santiago operators, will be operating as T48** (callsign not known yet) from Santiago de Cuba. Activity will be from February 27th through March 8th. Operations will include the CQ 160m Contest and the ARRL SSB DX contest. QSL via VE3ESE, with a SASE (CANADIAN POSTAGE ONLY) or SAE and a GREEN STAMP. All cards received via BUREAU, will be returned via BUREAU. Also, please check KWARC's web site at:
http://www.kwarc.org
Click on the special link, to see if your station was logged. Operators send out a special THANKS to the KITCHENER-WATERLOO AMATEUR RADIO CLUB, for their help and support.

TT, CHAD. Plenty of activity from this one! Eric, F5JKK, who was recently issued the call TT8JE, was heard on 17, 20 and 40 meters this past weekend. He expects to be there until March. QSL via F6FNU. Also, John, TT8JFC, was heard this past week on 20 meters (14213 kHz) from 2030 to 2330z. He was also heard on RTTY around 14082 kHz between 2330 and 0030z. QSL via WA4ZJB.

XU, CAMBODIA (Well this is an interesting one!). Harv, XU2FB, is now active as XUF2B (yep, this is not a typo!). He was heard on 20 meters signing this callsign. Also, according to the "DX News Sheet", Harv now has authorization for 30 meters and expects to be active on 80 meters soon with a new antenna. QSL via N4JR.

ZL7, CHATHAM ISLAND. It has been reported that Joe, YB1AQS, and a DL group (DL2OAP, DL3DXX, DL7UFN, DK1BT and DK7YY), will be active February 23rd to March 9th. They will use the callsign ZL7DK.

Now THAT was a real storm. I loved it. As I recall the city was shut
down for over two weeks. One end of our street was almost clear, and
the other had almost 12' of snow from the drifting. At times you could
not see five feet in front of you.

I only wish I had been a ham back then!!!

73, David - AB2CI (ex Buffalo)

>telling me to get out of amateur radio.

So two jerks out of 200,000 are going to drive you out of ham radio?
Life is full of jerks. If you let that sort of thing deter you,
you're never going to amount to anything.

Ham radio is a hobby. Hobbies are things you do for FUN. If you're
not having fun in ham radio, then I suppose the best thing for you
would be to tear up your ticket and find something else to do. If you
let a few jackasses get to you before you even start, then you're much
too thin-skinned for ham radio, or for UseNet, for that matter.
Perhaps you should try fishing or stamp collecting; things you can do
without interacting with other people.

what differance does it make to you if I WANT to upgrade or not.
I do code when I WANT to I see the relavance, and have made
the contact with cw when I could not with ssb. Why do you care if
I do code or not, whether I do it on hf or <6m is my business. Why
should I have to do hf if I don't want to??? I personally think that
hf is too crowded, and too easy to do dx on. THAT MAKES ME A
WHINER???? oh well
I just think things should be more of a challenge. HF is not a
challenge THAT MAKE ME A WHINER?????

such is life

Would someone *please* donate Dwight a clue? He clearly doesn't have a single one when it comes to understanding the term "communications" as it has been commonly used for so long to describe the passage of official, or even non-official, traffic over radio/teletype/anymode. The fact that he can talk at 'x' words per second won't help when it comes to conveying exact character information to someone on the other end of a communications circuit, of whatever type, and in making sure that information is properly recorded for use. And the fact that he considers cw as "very slow" certainly shows his lack of any knowledge of high speed CW operations. It's certainly not fast, by high speed digital standards, but hs obviously has been listening all to closely to the No-Code Agenda mavens spew their nonsense.

Note: Yes, we all know that there are *much* better,faster,more efficient and more accurate methods of conveying this same information than CW, but in the absence of all those it is certainly gratifying to find that CW is still around to fill in.

And your intent was to disparage Larry because he disparages anyone
too lazy to learn the code so they can get an HF ham license.

NO, no one is cheering over King Hussien's illness, quite the
contrary in fact. He is a very kind and considerate person, and I'm
ocnvinced the ham who complained to him took advantage of this fact.

Die discussion Die!!!!!

Hey.. ok... your trapped in the bow compartment of a battleship by terrorists hijacking the ship for its nuclear missles... your only hope of communications is morse code pounded against the hull that the lone hero navy seal can hear and come to your rescue!!!

There unqualified justification for knowing morse code... now... lets talk about something more meaningful than the code/no-code debate...

I don't give a rats patute what you do. No one said you had to do code
on hf, at the breakfast table or any other time. I just have no sympathy
for anyone who whines that the code requirement is keeping them from
getting a license or upgrading. If you don't
want to learn the code to upgrade, that is perfectly OK with me, just
don't whine that it is keeping you from doing it. The only thing keeping
you from it is yourself. You say you think things should be more of a
challenge? Well, learning the code can be a challenge, so what's your
beef?

>to protect
us against ourselves.

"Where's that big 'ol CB RAMBO??"
"I wanna
>hear him TALK TOUGH!!"

Kenwood has every right to sell HF rigs at truckstops, even though it is pretty obvious that part of the targeted market would be non-licensed people, and that it followe that there would be some unlicensed use of these rigs.

We also have rights.. one of which is to vote with our dollars and other forms of power on Kenwood's idea for truck-stop sales. You think that you should be able to buy a ham rig at a truck stop. No problem. I think it is a bad idea. That should be no problem either. If thousands of other hams agree with me, again, that should be no problem. We have the right to present our opinions to Kenwood. Are you still with me? Still no problem? good. We also have the right to tell them we are concerned enough to stop accepting their advertising, and even stop buying their equipment, which by the way I happen to like. Now is there a problem? No? Good. So where is the problem?.

We, the League, can refuse advertising business from whoever we want for whatever reason we want. We can even boycott products if we choose. You are free to tell Kenwood to please go ahead and sell at Truckstops. You are also free to either join the League and try get the policy changed, or elect those who agree with you, or offer advertising to Kenwood in your own magazine. You are free to hand out free booklets with step-by-step instructions on how to clip the diode that opens up full-coverage transmit. I am free to withold that information from you or anybody else.

Yes, I have heard of free enterprise. So has the Editorial staff of QST, which by the way is sold in bookstores even to non-members, for a price, and has to target a market and produce an attractive product for a reasonable price in order to sell. Free enterprise. I believe in it, Kenwood believes in it, and the elected officials of the League believe in it. That we used economic clout to influence corporate policy is in fact an example of free enterprise.

Kenwood cannot force us to carry their advertising or buy their radios. We cannot force them to keep their sales out of truckstops. Kenwood doesn't have to give us their advertising business either, by the way, nor do they have to target us for sales of HF rigs. They don't have to listen to our opinions if they don't want to. We have no obligation to do business with them or anybody else. This whole affair was in fact an excercise in free enterprise. Free enterprise doesn't mean a free ride. It means we are free to try to make a buck operating whatever legal kind of business we like, and are free to respond to our market in whatever way we see fit that is within the law. We even have the right to make bad business decisions, a right that Kenwood decided not to excercise in this instance.

So vote in your own candidates, and give the old ones the bum's rush and good riddance. Surely, if a majority share your views, candidates who also share them are a shoe-in. Or start your own organization, the DRRL. With a majority, you could drown out your oppressors with numbers, not just loudness. By the way, since the League has a strangle-hold on FCC policy and regs as you and a few other suggest, I am assuming that you have joined to give the benefit of your opinions to our overall policy and philosophy. If I am wrong, and you do not really care what stance the ARRL takes and so are not a voting member, my apologies.

Try the Ramsey catalog. They have some fairly sophisticated kits and finished units, as well as simpler ones similar to what you probably had a bad experience with. I found that the simple "wireless mic" types could have a range of a couple hundred feet with a resonant dipole.

I think max power is 100 mw. Also you may not cause interference blah blah blah .

You could just use yyour audio to control a varactor diode in a simple reactance modulator for a single transistor oscillator. At VHF you need to be careful to keep leads short and trim close. coil tweaking can get kind of touchy too.

AM is also a viable option and I guess you could use your audio out through a pot to "plate modulate" a 2N2222A running at a MHz or so, run the output through a simple pi network and directly feed an old ferrite loopstick antenna. You should be able to cobble that together in an hour or two.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK
>TOUGH!!"

Most of Ramsey's gear is in fact legal output for the US. Also, I bet if you took your "Mr Microphone" out of it's shell, optimized it's output network (if it has one), designed a properly resonant antenna and matched it properly to the output, you would be surprised at the range, and all without an increase in power. Modulation using recieved audio directly instead of using Mr Microphone's microphone would probably work FB.

Note that the poster only wanted to transmit throughout the house, and was not interested in pirating. He has no more need of 10 watts or even 1 watt than you need a Vibroplex bug.

--
Kevin
>Podsiadlik (AKA KJP)

If the voices NEVER come in clearly, it might be SSB, which could be from ham stations but are likely to be CB. CB is not only full carrier AM with a 4 watt power limit. Single-Sideband mode can be used on CB at up to 12 watts legal power output.

Proper filtering of the output and proper grounding reduce interference, usually to the point of inaudibility. Hams generally know how to assemble a station that causes little if any interference. They are tested on their

knowledge to do so when they go for a license. Even though testing does not ENSURE thaat the licensee knows his stuff, or will comply, it definitely makes it more likely.

several CB channels have harmonics that fall on certain VHF TV channels. A high-quality and technically correct CB installation will not have a lot of harmonic output, but the average level of technical competence of CBers because there is no testing or licensing at all, falls somewhat below the average ham.

Most probably, though, if the interference is severe, the problem is a CBer using an illegal power amplifier or an illegaly used ham rig that has been modified to transmit outside the ham bands. Most ham rigs capable of such modification run 100 watts, and amplifiers are readily available up through the legal limit to hams, 1500 watts.

Note that if the voice is ever clear, it is AM and not SSB. AM is rarely used by hams.

If you have a SSB CB, or access to one, you can try listening when the interference is at its worst. If you can at least figure out the channel and mode, you are well on your way to solving the mystery.

Your local ham club will probably be happy to try find the source of your interference. Note that if the station is operating legally, you have to look at your TV setup to stop the interference. The same hams will be able to show you steps you can take to make your TV more resistant to interference. The first thing to try is an inexpensive little doodad called a high-pass filter. This goes between your antenna cable and yout TV, and prevents lower frequency radio energy from passing through to your TV. These things really do help. Another thing to try is a ferrite choke on the power cord.

You can also check and see if any of your neighbors are licensed. there are CDROMS available with the entire callsign database, or you can access a site such as http://www.qrz.com/cgi-bin/webcall/callbook.html and look up your town or even your street. If it is a neighbor, I bet he will work with you to resolve this thing even if he is not at fault.

Telephones, especially cheap ones, are notoriously susceptible to all sorts of interference. The manufacturers don't care if they are, because the consumer always blames the problem on the interference source whether it is operated legally or not. They never blame the phone. Again, find your ham neighbor and ask if he has some old junk torroids. which are doughnut shaped cores of ferrite material. Run your phone cable through the thing a dozen times or so, then the handset, as many times as it will pass. You should see an improvement. This helps prevent RF energy picked up by the cables from getting into your phone.

Most phones and TVs also have very poor shielding. Ideally, consumer electronics should be in metal enclosures that totally surround the guts. The enclosure can then be bonded to ground for even more effect. Well, that's not what we have, but some appliances are better than others. Try other brands of telephones... borrow, swap, whatever. GENERALLY, the cheaper the fone, the worse it is, but there are probably lots of exceptions.

If you ever find yourself in a Radio Shack outlet, ask if they have info on the local ham radio club. Someone in the club will probably be willing to help. Don't be surprised if they get you interested in amateur radio, though!

Just as there will be some people who buy a shotgun at a sporting goods store and use it to kill another human being; people who will buy liquor at the grocery store and then drive drunk, possibly also killing another human being; people who will buy aerosol paint or glue at the hardware store and use it to intoxicate themselves, etc., etc. Should we stop the sales of these things, too? Once you start with "we better ban the sale of ____ because someone MIGHT use it for illegal purposes", where does it stop?

We also have rights.. one of which is to vote with our dollars and other >forms
of power on Kenwood's idea for truck-stop sales. You think that you >should be

is there a problem? No? Good. So where is the >problem?.

Kenwood caved in to a small but vocal minority of opressors. That's the problem,. In the process, they denied potential customers the opportunity to purchase top-notch amateur gear in areas where it might not otherwise be available, except for mail-order. Most truck stops are in rural areas of the country. Not many HRO, AES, or Radio City stores in those areas. Many others besides truckers tend to purchase their radio equipment at truck stops in rural areas because it is the only place you can buy locally, except for Radio

Shack's junk, of course. By the way, many truckers ARE now licensed amateur operators, and their numbers are growing. Many use 2m simplex in their rigs and a smaller but increasing number are also receiving 10m (Tech-Plus) privileges.

We, the League, can refuse advertising business from whoever we
>want for
whatever reason we want. We can even boycott products if we choose.

I'm not sure about that. If Kenwood wanted to pursue the issue, they might have grounds for a discrimination suit. You are excluding them from advertising a legal product for sale, simply because of the location at which they propose to sell it. This would be similar to retailers that refuse to sell to unlicensed persons. Discrimination suits have been successfully fought against these merchants because the law does NOT require a license for purchase and so denying the sale is a form of discrimination.

>You are
free to tell Kenwood to please go ahead and sell at Truckstops. You

>I am free to withold that
information from you or anybody else.

Nobody said anything about modifying the radios. You are making the incorrect and discriminatory assumption that all potential customers of amateur radio equipment at a truck stop would be purchasing them for illegal purposes. This is simply not the case. And once again, even if SOME of the purchasers do indeed use their equipment for illegal purposes, this is not the responsibility of the retailer. Let's take some responsibility for our own actions, instead of blaming society, the white man, the black man, the liquor store owner, the cigarette companies, McDonalds coffee, or the truck stop which sells amateur radio equipment.

Can't do this and stay within the rules. Antenna length is restricted to one meter, INCLUDING the feed line. Even with a quarter-wave whip, mounted directly on the case, you would still lack a sufficient ground plane.

Source record: 179932

I have a Precision 10-12 (in good working order) and a 10-15 needing repair/calibration.

I am seeking to swap for supplementary tube spec manuals (like the Hickoks have) for old tubes, foreign tubes and new tubes. Would also like to find a service manual that provides calibration and repair info.

I have copies of manuals of various sorts to swap that may prove useful to anyone who has TV-7's, some Hickoks, etc. Also have a copy of a 1937 RCA tube manual, etc.

If anyone is out there who has the above, let's talk.

Thankyou,

IF I HAD to get the motorcycle endorsment to get my license, I would.
HOWEVER, I DON'T. I do not ride a motorcycle, therefore I have no
license. I do not have a desire to ride a motorcycle so I do not have
the license.

ON THE SAME NOTE....

IF I WANTED hf privilidges other than what I have now <which I don't
use cb> I would go down and pass the code test along with the current
written exam corresponding to my want of hf. I do not desire to do hf,
nor do I care to work dx pileups on 40meter or 20 meter. MY DOG can
do dx on hf. I could throw a wire out the door, hook it to a tuner,
and work the world.....SO??? If it was so pleasurable to do so, I
would have already. I choose alternative ways to get my dx.....
1 I am patient
2 I try to set up a good station including a bit of antenna knowhow
that I have learned, some good radio technique, some wonderful
tips in use that people have given me....to work on 6,2,220,440

and up. It is much harder doing dx on these bands. It takes more
effort, knowhow, and $$$ to do dx on these bands. AND I DO USE
CW sometimes....IF I WANT to chase that elusive station.
3 I listen a lot and watch the packet cluster
4 read #1
5 I do a lot of local ragchewing on 2 and 220 simplex playing with

new ideas on ways to get on other bands that I am allowed.
6 I do NOT cry about not having hf, I have plenty of bandwidth
to worry about now, I should want to get on a crowded elitest
butthole ridden place????

>
>When one takes an exam, the exam does not ask you how the engine works
>nor how the speed meter works. Instead, you get an exam which is
>directly related to actual operation of the vehicle... practical.

The driver's test in Illinios, a part of North America, requires not only parallel parking skills, (which are rarely used in most of the state...the inner cities being the exception) AND a working knowledge of hand signals, even though its been 30 years since I have seen anyone in the United States use them. They are, however, there, on both the written test, and the road test I took when I renewed three years ago. They are there as an alternative to the technologically superior mode of head in parking in suburban lots, and electric turn signals. Backups in the event of a failure, or the absence of the more desirable and convenient preferred choice.

Further, in some European countries, rudimentary mechanical knowledge is tested for a driver's license. To prevent a motorist from being stranded in an emergency. AND to insure that the motorist knows and understands the not only the practical limits of his/her vehicle in operation, but also to insure a safe and certain journey.

So, once again, your facts have fallen victim to your prejudice and, like some talk show hosts, you have created an argument that is neither accurate, nor effective, in your effort to be compelling. Please reevaluate THE facts. YOUR facts are deficient.

The VEs giving the code test can do so in a combination of methods. You will be sent five minutes of code. You will be given an exam that may be multiple choice or fill in the blank questions. In either case there is not a pre-published list of what text message is sent in the code test or what the questions are. The VEs can also choose to examine the paper you used to copy the code on to see if you copied at least one minute of code correctly. Most VE teams will have you take the written test and then, if you fail the questions, they will examine your copy paper to see if you copied at least 1 minute worth of text at some point in the five minute test. If you have done so they will then pass you. Believe it or not these Coded ham VEs want you to pass and are giving you every chance to do so.

> And second of all, the Technical information is of use to ALL Hams,

Yes you are correct. But memorizing the answer to a pre-published question does not show any knowledge about the theory behind the question. The VEs can only use the official question pool and are not allowed to change the questions or answers in any way, other than the order of the multiple choice answers.

Does anyone have problems using the ADMS-1D software with the Yaesu VX1R? I found a bunch, and so far RT Systems only fixed one! Also, is there a mod or '.INI' addition that can be performed to disable the frequecy check when programming memory locations.

Any secrets found in the VX1 that are not documented?

Sure it does CB. You are proof positive that the CW requirement keeps admitted illegal freebanders such as yourself off of the hf ham bands where you would foul up the air with the same garbage you spew here.

The eight year old spent her time applying herself to learn something rather than whining about it.

Be a winner CB not a whiner....

Actually, all I really want and need is everything above 6 meters which does not require code. I will be happy with the microwave bands and using satellites over shortwave. Your right, I would probably never go below 6 meters anyway, and neither will any of the new Hams (which are all joining with the No-code Tech license if you haven't noticed) Eventually there will be no one on the "HF" bands, unless the code is dropped and some decide to experiment down there for nostalgic purposes of running old antique radios which might be fun, but not important enough for the main population to want to learn Morse Code for which they will never use anyway.

Kind of like having to learn Russian before you are allowed to use a Rotary Dial Telephone. It may be nostalgic and fun to use and dial that old antique Telephone every once in a while, but not THAT important that you would first learn Russian! Especially if you never intended to use Russian for any other purpose than using a Rotary Dial Telephone!

First of all, they would have to have a radio with the "HF" bands handy,
as you suggest. (that would go along with a very LARGE antenna too that
would match the long wavelength!)

Second, why ask for help from someone on the other side of the planet?!

Third, the majority of people on this planet do NOT know morse code, so
if you want to make a distress call for help, your message would reach
the most people by SPEAKING! Even someone who does not understand
English could hear the distress in the person's voice, and understand
the word "HELP" to get that person some help. If that same person heard
Morse Code on a frequency (and did not understand it, as MOST in the
world would not) he would say. "oh, someone is using Morse Code" and
would keep turing the dial as he would not hear the distress of the
tones as they would sound no different as a NON distress message.

You want to reach as MANY people as possible when you make a call for
help! Limiting your audience to the few who can understand Morse Code
would be very unwise when urgent help is needed!

54% is 5% more than what our last President was elected by. That didn't
stop him from saying the "voters gave [him] a mandate".

>And 52% supported its removal as an international
>treaty requirement, apparently in the belief that each nation should be
>free to make its own choice in the matter.

A reasonable position to take. Each country should be free to formulate
its own licensing requirements.

>And 72% of the respondents
>reported that they never or rarely used Morse. Only 27% were regular
>active Morse operators. So this is certainly a "do as I say, not as I
>do" group.

Absolutely not. Your assumption is people can operate whatever mode they
wish whenever they wish to. I do not feel comfortable operating morse
code in my truck (although my good friend, Ed Hare, apparently does.)
As such, I operate FM in the majority of my free ham-related time,
which is during my commute. When I'm at home, I operate 90% code and
10% SSB. But, I only operate at home about 25% of my operating time.

>Now... do you have another lesson for me on the fine points of
>blue-water
>navigation? Stick to CW, a topic you know more about.

You are right, Masa. My ship is only 49,000 gross tons. I should have metioned ULCCs that use celestial as well as electronic means of navigation. Celestial navigation problems are a large part of the navigation syllabus of EVERY maritime nation's Deck Officer Exam battery. I say again, No prudent navigator relies on a single means of position determination. What do you not understand about this? I refer you to Bowditch's "American Practical Navigator", a required navigational text at every single American maritime school includingthe U.S. Merchant Marine Academy at King's Point. It is also required to be aboard every single ship under U.S. flag in ocean service.

Yes, We have GPS on U.S. Flag ships. Many ships also have Loran, though this is of limited or no use outside the coverage areas. Some also have the old SATNAV system, though you can not get constantly updated fixes. On ALL ships, Celestial Navigation is still a major part of the navigator's toolchest, and will always continue to be. The old man on my ship expects to see some LOPs on the chart or plot sheet. All prudent Masters do.

If you don't think a 49,000 ton heavy RO/RO-car carrier in commercial North Atlantic trade is a large commercial vessel, then I guess I give up. You win the argument.

Again, stick with something you know about. Don't try to teach ME about navigation, as I don't think you have the credentials, training, or experience.

I guess the same could apply to your views on CW too, come to think of it.

US CW operators do it all the time with English/French, English/German, etc.
There are enough abbreviations used in CW to exchange basic information like
name, QTH, RST, and probably a hundred other items (Q codes plus Phillips codes).
Communications problems arise, of course, when one strays outside the abbreviations.
To the best of my knowledge, all the abbreviations are based on the English language.

Message-ID: <6b597s$bd4@news.Hawaii.Edu>
Source record: 179561

Welcome to the ACS Newsletter, developed by the ACS Training Unit of the State of California Governor's Office of Emergency Services. Please visit our ACS Home Page at http://acs.oes.ca.gov

The purpose of this weekly newsletter is to bring those of us in emergency communications closer together by sharing common ideas, and by introducing new technology into the emergency services community. All individuals with an interest in emergency communications, disaster preparedness or helping the community at large are encouraged to participate here in an open forum.

You will find a virtual community here with representatives from many different organizations with the same common goal: emergency response. We encourage everyone, from whatever organization you represent (or just yourself!) to bring us your ideas, suggestions, concerns, manuals, handbooks, or opinions so that we may share them with the group. To those of you who have just joined us, welcome aboard! Newsletter Subscribers: <540>
.....

>From the Editor's Desk:

Thanks to the Huntington Beach Community Emergency Response Teams (CERT) in Huntington Beach, California, who have made our State ACS Home Page their Site of the Month! We appreciate it... More on their website is featured for you below in the 'What's New on the Web' column.

Congratulations to Bob Spencer N6IBO, appointed this week as Monterey County ACS Coordinator by the Monterey County Office of Emergency Services. Bob is putting together a County Disaster Council represented by all emergency services communication groups, and we will be hearing more from him as Monterey County joins the ACS family. Welcome aboard, Bob!

We may be changing the dates of the 1998 Emergency Response Institute... ERI Incident Commander Ben Green WD8CZP, may have a location set up for us in June with the Radisson Hotel in Sacramento, who has agreed to help us put on the ERI at very little cost. Stay tuned; we should have more information coming out in next week's Newsletter...

February marks our first anniversary of the ACS Newsletter on the World Wide Web... It has been more successful than any of us could have imagined. We appreciate the input we have received from you, our subscribers, who have made this past year's editing of the Newsletter both interesting and fun. Have a safe 1998 -- Dave Larton
.....

>From the mailbag:

EDITOR'S NOTE: I received two emails this week from subscribers that wish to include our Newsletter and EMCOMM Bulletin in their regular club newsletters.
They were concerned that our Newsletter was for ACS personnel only. We're honored; you do not need to be an RACES/ACS/ARES/REACT or whatever organization to reprint our material. You'll find that we try as much as possible to be non-agency specific; the EMCOMM Bulletins are designed to be of value to ANY volunteer organization. So, don't let the fact that your club logo may be different from ours dissuade you; the more information we can share with each other, the better all of our organizations will become. As always, keep those cards and letters coming...

>From FEMA:

CD-ROM for Disaster Educators Now Available

With a click of a mouse, emergency managers, fire safety educators, and community volunteers can now have instant access to brochures, fact sheets, activity guides, and other resources for raising awareness and educating the public about disasters. The FEMA Disaster Preparedness & Mitigation Library is now available on CD-ROM.

FEMA's CD-ROM library offers:
- Ready-to-print materials on floods, earthquakes, hurricanes, winter storms, wildland fires, and other disasters - many have been coproduced with the American Red Cross and the National Oceanic and Atmospheric Administration
- Information on disaster preparedness, mitigation, response and recovery, including new brochures on how to reduce financial hardships caused by disasters
- Emergency planning guidance for businesses and manufacturers
- FEMA's "Good Ideas Book" with activities, case studies and resources for educating children, homeowners, and others.

In addition to PDF files, which look like images printed from the Internet, the FEMA Disaster Preparedness & Mitigation Library on CD-ROM includes high-resolution printer files and instructions for producing high-quality color brochures at a professional print shop. PC and Mac computer discs are included in the package.

The FEMA CD-ROM Library is specifically designed for disaster educators who provide information about multiple hazards and who want to produce high-quality educational materials at a professional print shop. People wanting single copies of materials can obtain them from the FEMA Web site at www.fema.gov. To order the FEMA Disaster Preparedness & Mitigation Library on CD-ROM, call (202) 736-1648; fax: (202) 331-3003; or e-mail valca_valentine@oar-wash.com.

For program information, e-mail CFP Program Manager Ralph Swisher at ralph.swisher@fema.gov; or write to him at FEMA, Training Division, Preparedness, Training, and Exercises Directorate, Room 625, 500 C Street, S.W., Washington, DC 20472.

CALL FOR VOLUNTEERS

Simplex Field Test in CD District V
Saturday, 07 Feb 1998

breakfast meeting - 8am at the Koa House in Kaneohe
field tests to follow directly after breakfast

A long-range project of the Oahu Civil Defense Agency (OCDA), the Radio Amateur Civil Emergency Service (RACES), and the amateur radio community is to provide a detailed plan for island-wide simplex communications.

The simplex mode is the fundamental backup system in the event normal means of communication are disrupted. For example, the commercial phone system goes out or radio tower-dependent systems are blown down.

We are working to establish usable simplex links within local areas and critical connectors back to central command/control points. Ideally, the radio operator at a emergency shelter will be equipped with the master simplex plan. This will indicate where and how the shelter can contact the local Emergency Operations Center (EOC), HPD, etc. It will also demonstrate how to pass a message via simplex from the shelter back to OCDA.

Successful data has already been collected for CD District III (Waianae). Next Saturday, 07 February 1998, we will be working in CD District V. This region goes from Pupukea on the North Shore down the Windward Coast to Kualoa. This beautiful region of our island-home has diverse and challenging communications needs.

Please consider joining the team this Saturday. It will be fun day of fellowship and radio work. The end-product will be excellent communications plan to the serve the community in times of need.

ALL RADIO AMATEURS ARE INVITED. PLEASE PASS THIS MESSAGE ALONG TO INTERESTED PARTIES.

Breakfast / Planning Meeting
Saturday morning (07 Feb) at 8am at the Koa House in Kaneohe
46-126 Kahuhipa, phone number 235-5772
from town: Likelike, left onto Kamehameha Highway, left onto
Kahuhipa (last major road before Windward Mall)
talk-in frequency : 146.52 MHz (simplex, of course)

What to bring:
mobile radios
portable radios
J-pole antenna, etc
road map
pencil & notebook
camera
GPS
plus, anything else I'm forgetting

Please contact myself to sign-up and/or for additional details.

Mahalo and 73s,
KH7CL
RACES Deputy Coordinator

From: chiefdoc@juno.com (Robert EB Spencer)

Dave,
Would you be able to put the following information in the "ACS
Newsletter" for the next several Saturdays re: Winterfest 98' in
Monterey, sponsored by the Naval Postgraduate School Amateur Radio Club:

WINTERFEST 98'
February 21, 1998 (Saturday) 8:00 AM - 1:30 PM
National Guard Armory (behind Monterey Peninsula College)
Monterey, California

FREE Public Service Event

ALL facets of Amateur Radio will be represented and demonstrated!

Spread Spectrum Satellite
Voice & CW Packet
ATV APRS
MARS ARES

Hopefully we will also have several "static" displays:

Red Cross Van (ERV) Santa Cruz ARES Van

The California Department Of Forestry and Fire Prevention
Volunteers in Prevention (Amateur Radio
Comunications), will also be represented and will have
pamphlets on the program, as well as, registration applications.

The Web Page: www.mcktech.com/wf98.htm

On the Web page there are futher details on Winterfesr 98' and many other 'sites', connected to 'ham' radio. There is also a map on how to get to the college and specifically the National Guard Armory!
.....

What's New on the Web:

Tonight's Volunteer Spotlight shines on Huntington Beach, California:

Huntington Beach Community Emergency Response Teams (CERT) Home Page
http://ourworld.compuserve.com/homepages/pburtis/

CERT is an organization dedicated to disaster preparedness, education, and training for the citizens, schools, and businesses in Huntington Beach, CA. The city of Huntington Beach formed CERT as the citizen-volunteer arm of the Emergency Services Office. The goal of CERT is to provide training and education to the citizens, schools, business, and employees of and within the city to better prepare them to respond quickly and properly in the event of a disaster.

To meet this goal, CERT offers training classes in several subjects: Search & Rescue, Fire Extinguisher usage (hands-on!), Shelter Management, CPR, First Aid, Communications, Emergency Management, and other special courses as needed. CERT also publishes a monthly newsletter free to qualified individuals and businesses.

In addition to formal training, CERT also provides a Speaker Bureau and Liaison Outreach Program. Speakers are available to come to your neighborhood gathering and discuss disaster personal preparation. And groups of neighborhoods within the five city areas have the opportunity to attend the special First aid and Search & Rescue training the Outreach program brings twice a year to each area.

Don't forget to send them email at:
74354.273@compuserve.com

Have a Volunteer site you'd like to see Showcased?
Email larton@garlic.com
.....

This week's EMCOMM Bulletin:

EMC117 Family Protection For release 2/2/98

The loss of a home can be a frightening occurrence. While it is hoped that you never experience that, the collection of vital family information ahead of time is a wise precaution.

Here is a "Family Information Record" as suggested in the December l997 Community Emergency Response Team (CERT) Newsletter of the City of Huntington Beach, CA:

"Store the following information in at least two safe places. Consider using a fire resistant "get away" box, a tightly sealed freezer bag in the freezer or the home of your out-of-

state family contact, and safe-deposit box.

1. Full name and Social Security numbers of all family members.
2. License numbers and identification of vehicles, boats, etc.
3. Charge and bank account numbers, insurance policy numbers, securities, deeds and loan numbers showing company name, address and phone numbers.
4. Name, address and telephone numbers of: employer, utility companies, school, attorney, family contacts, doctor, hospital
5. Location of important documents such as: insurance policies, social security cards, deeds,loans, citizenship papers, will and letter of instruction, securities, health history, safe-deposit box key, tax returns (last 5 years) vehicle titles (pink slips), licenses, birth/death certificates
6. Photograph or video tape of all valuables for documentation for insurance claims."

The same newsletter suggested each person assemble a "Grab 'n Go Bag" that can be used when an immediate evacuation of your home is necessary. It recommended NOT storing water and snack food in it due to leakage and spoilage. Here's their list:

-Flashlight and batteries*
-Comfortable shoes and 2 pairs of socks*
-Comfortable clothing (i.e., sweats and extra underwear)
-Dust mask
-OKAY and HELP signs
-Whistle
-Water (in pouches)
-Medicine, glasses and small first aid kit
-Snack items (granola bars, trail mix, cheese/peanut butter)
-Toiletries (toothpaste, toothbrush, comb, lotion, razor, soap, sanitary products)
-Wash cloth and small towel
-Good book, playing cards, family pictures
-Lightweight blanket
-Records (Insurance, Medical, Social Security, out-of-state telephone numbers, etc.)
-Paper and pencil
-Rain gear
-Sunscreen
-Cap or hat
-Leather gloves and Latex gloves
* Put shoes and flashlight on top

Visit the CERT home page at:

Mark,
I have absolutely no idea what this post means.
Some of you guys keep saying that you can convey
more information via voice than even the fastest
cw can. But at the risk of sounding insulting,
some of you cannot do a very good job of
communicating information via the typed
word. I hope your phone skills are
better than your typing.

Does Masa want to abolish phone numbers because
the 'code' is too hard to learn?.........

From: Elena Nesvetaeva <lenka1@worldnet.att.net>
Message-ID: <6b5ujn$pav@bgtnsc03.worldnet.att.net>
Source record: 179567

Folks,

Does anyone have any experience with ham radio ("radiolyubitel'stvo") in Russia?

How does one go about getting a license? If you can give me phone numbers or addresses of related organizations in St. Petersburg, Russia, it would be especially helpful.

What is the approximate price of equipment in Russia for voice communications with the outside world (and what equipment is needed)?

Thanks,

Elena

207. NO Code; Ham radio HAS ALREADY BECOME CB'd

However, if it had not picked up so many CBers, their would be much less hams AND alot less political punch AND more bands taken from us. I'm in a delema. I love CW, however I like our bands and would like twice as many (+) ham operators. We can't have more operators if we put up barriers to them. We can't keep our bands without large numbers. BTW I use the CB band along with 10, 6, 2 and 20 meter SSB while travelling. Jim Wooog (as on Old Old Goat (1st licensed 1947))

> You also no longer have to possess skill in operating a manual transmisson
> in order to get a driver's license.

I've never been licensed anywhere where it was required to show skill in operating a manual transmission (although I can surely do it well enough)--been licensed in PA, TX and Germany.

But why did they do away with the parallel parking test requirement in Ohio? Because people were failing that test most often? It is one of the more difficult maneuvers for a new driver to perform.

>Do you now see how lame you argument is?

My comment was not meant as an argument (lame or otherwise). Just a personal general observation on what I see as the current trend toward lowering standards--be it in driver's license testing, amateur radio examination requirements, or high school graduation requirements.

Maybe we *should* base all of our standards on the lowest common denominator so there is no challenge in anything worthwhile and Johnny still can't read.

I'm curious what it is that the deaf hams are doing with CW. Certainly
the Handi-Hams have not embraced the CW waiver?
Maybe Dick the VE can tell us what accomodations that he has made for
testing deaf hams.

While potentially desireable, it is certainly not ``necessary'' or
``required'' in any legal or regulatory sense.

>Equipment or band conditions may make it possible that the only
>way the message can be sent is in CW.

In an emergency situation, you will use whatever equipment or methods which
are available to you. For me, that means I will use VHF equipment, cell
phones, or loud yelling. Any situation which cannot be resolved with one of
those three mechanisms is unlikely to be aided by somebody on HF.

>Communicators around the world know
>that if they go to the hf ham bands and start sending, there is a good chance
>that they will be picked up by one of the hundreds of thousands of hams world

Well HELLO wake up and learn the code. its there to make sure people YOU dont get on the HF bands. I will say it again If you want anything bad enough you will do it what ever it is. CW is a goal, Have you listened to CW it will get through stadic when voice, packett, rtty, amtor, pactor, or any other mode wont. I have. AND no i dont think that you should be put through the training just to learn a useless thing, I think that if you want it (an HF license) you will learn CW.

They give him -and everyone- a break in that nope one is "forced" to
continue to use it after licenseing if they choose not to, and he turns
it into a point against code's existance! We knew long ago that this
was coming.

>

No, we'll excel in bottom line communications when he is sitting on his
hands toungetied.

Personally, I'd rather question what I don't
> think is right.

He knows nothing about it, nor how it is done, and he has no
understanding of it's universal value, he just doesn't think it is
"right".

Maybe I just don't think code is fun. But if someone has
> to think code is fun to advance in this hobby/service, it can damned well
> die as far as I'm concerned.

"My way or the highway". Where have we heard ourselves accused of such
nonsense?

If hams continue being unrealistic and just
> plain silly with their sentimental pro-CW testing nonsense,

Clearly he has no communications concerns at all, here....Just plain
nonsense talk.
Sentimental pro-code cw testing. Yeah, right.

maybe they
> don't deserve the spectrum which they also must not be taking very
> seriously.

For damn sure you don't.

Maybe hams don't see things that way, but the "powers that be"
> who make the rules we must abide by certainly do.

Oh?? Quote us some "official" outlook just for grins.
Somehow the word drifting out of official circles is definately to the contrary. Throw out all your nonsensical, agenda-driven propaganda and all other useless junk postings, they're all for naught. Code is here to stay, for awhile at least. There is currently no substitute-no other digital mode that is anywhere as nearly widespread within ham radio and in such widespread daily use. Sorry, Bud--learn it or forget the whole thing. Your position is CrACKed, along with your attitude. Your name, too. Got something to hide?

That's *your* viewpoint, clearly incorrect and unshared by persons who
have been deeply involved in *real* communications for many years.

It may make a
> good twist in in Hollywood movie plot but it has very little validity in
> real life anymore given the number of digital choices available today.

You no-coders always quote the official Hollywood fiction when
attempting to support the fiction of your own manufacure. The fact that
you are *sure* that code will never again be needed is the most
fantastic fiction of all. Where did you get your crytal ball? Who
calibrated it?

Greetings Ed
If the battery is nicad, you should use it until it shows signs of
dying, lights go dim, poor sound etc.
In terms of charging, I would recommend that you use a slow charger,
they perfer slow charging. Nicad batteries are charged, actually
overcharged, when they start getting warm.
Also, before you start the charging process, measure the voltage of
each cell. Often times one cell in a pack will become shorted and
keep the overall voltage from reaching it's peak. If one should short
out, obviously, replace it. New nicad batteries come discharged so
you will have to charge it, initially. Also, new batteries should be
slow charged initally.

Is amateur radio falling apart?
Tell me, is amateur radio falling apart? We seem to be knocking down
virtually every aspect of it.
Nocoders want the code dropped for hf access.
Cbers want to use amateur equipment on 27 mhz.
Even this newsgroup seems more like a battle field then a help group.

HELLO ??

we know we have to study OBSELETE USELESS code to obtain HF access.
we are trying to just change the regulation so we don't have to.

in 50s, if you wanted your life, you had to go to war. the war was
right. everything was right. totalitarianism was right.
well... we changed it. we wanted to change it because it wasn't
right. now... we feel CW isn't right so we are trying to change it,
ladies and gentlemen.

> VK4UHF

[The following is a bulletin I put out on packet during the week; I thought it might generate some useful discussion here. You will probably need to display it in a monospaced typeface like Courier to see the notation correctly.]

Hi all,

The ongoing Morse debate seems to be generating more heat than light, so I'd like to try turning the discussion in a more productive direction. Let's start with a bit of stir...

If Morse were easy to master, using the conventional methods, then we wouldn't be having this discussion. Everyone would learn it and and pass the exam, then use it or not as they wished. So...

Rather than wasting all this energy arguing about whether or not Morse proficiency should be required for an HF ticket, how about looking for more effective ways to master CW in the first place?

What I'm suggesting is that we would serve our interests better by identifying people (Amateurs or not) who are highly proficient at CW, and "model their strategies", a term which I'll explain in a moment.

If you ask most CW ops the secret, they'll probably say "study, practice, practice, practice...", which may help, but it doesn't tell you specifically how they are doing what they're doing. If I ask you how you drive a car, recognise a person's face from a ten year old photo, remember the tune of "Advance Australia Fair", you will probably shrug, and say "I just *do* it". In other words, you display unconscious competence at each of those skills, all of which are probably more "processor intensive" than matching a few patterns of sounds to letters and numbers...

The "NLP" in the title of this message is short for "Neuro-Linguistic Programming", which is defined as the study of the structure of subjective experience. In NLP terms, every experience we have, whether it's performing a skill, or having a phobia, etc. has a distinct "structure". By exquisitely mapping out that structure

and teaching the structure to someone else, you can transfer that skill. Or, you can change the structure, e.g. to cure the phobia.

By "structure", I mean the sequence of sensory stimuli (visual, auditory, and kinaesthetic); whether we're consciously aware of it or not, every experience has a particular recipe.

Here's an example, one that may be of interest to many packeteers, namely the experience of spelling. :-) The difference between good and poor spellers is the way they structure their internal experience of spelling. Quick test - which of these words is the correctly spelled one: "packet" or "pakkitt"?

A good speller will structure the experience like this. First, they will look the visual representation of each word in their mind, and notice some kind of physical (kinaesthetic) sensation that indicates to them whether they recognise the word, and know the answer. If you pay close enough attention, you can distinguish between the sensation in each case. In NLP terms, this is represented as:

r
V -> K (i.e. Visual recall -> Kinaesthetic)

Poor spellers often use an auditory strategy, which works abysmally on a bastard language like English. They try to judge the correct spelling by sounding the word out (ironically, the "phonics" system that I learned as a child in the USA - did they use that system here? The word "phonics" itself isn't spelled phonically...) Incidentally, this strategy works better in Spanish and Italian, which sound more like they look, but I digress.

Still with me? Well, the point of all this is that super CW operators structure their experience differently than those of us who struggle(d) with it.

Before you ask... no, I haven't (yet) modelled any CW ops and their strategies. However, if you search the Web for "NLP" and "CW", you'll find someone who has, and who sells Morse tapes based on this concept. I haven't tried them, so I don't know how effective his model is.

[The URL for this is http://www.qth.com/cweasy/ - anyone tried it?]

Now, how do you know whether someone is using visual, auditory, or kinaesthetic modes at any given moment, especially if the person is not consciously aware of what he's doing ("I don't know, I just *do* it")? You can tell a lot by observing very closely where his eyes are looking.

As a general rule:

When people are... They look
r

recalling visual information (V) Up and left

c
constructing visual images (V) Up and right

r
recalling sounds (A) Sideways left

c
constructing sounds (A) Sideways right

id
talking to themselves (A) Down and left
(id = internal dialogue)

assessing physical feelings (K) Down and right

(This has been observed in 85% of right handed people in study samples; left-handers are often reversed, or "wired" in some other manner, and there are always exceptions. By careful questioning and observation, you can determine how each person is "wired".)

The "eye accessing cues" can occur very quickly and occur in long sequences, so there's something of an art to recording them accurately.

So, if you know someone who is really good at Morse, and s/he'll let you watch him/her in action, you may learn something very much to your advantage. You can consciously adopt the strategy (replicating the eye accessing cues) and use it until it becomes unconscious.

id
By the way, I suspect that an A element in the strategy is what throws a spanner in the works for most people reading Morse. I imagine that the successful CW op works more like:

e r
A -> V -> K

That is, an external auditory element (the heard sound), to recalling a visual image of the character, together with the previously read characters, and a kinaesthetic indicating whether it's right or wrong.

(Anyone interested in reading a really dry and excruciatingly detailed decription of this is directed to "The Structure of Magic", vols 1 & 2, by John Grinder and Richard Bandler.)

73 Richard VK2SKY

PS: For those of you desperate for code-free HF, get a 27 MHz CB, and learn the joys of QRP operation! It used to be an Amateur band, after all :-)

I don't follow. If only one operator is involved is he/she sending/receiving to
their self ?
If an operator is receiving traffic via any mode the traffic has to enter the
system
somewhere. Does a machine gererate the traffic ?

DIVISIONAL NEWS (01/02/98)

SILENT KEY

Lester O'Connell VK2BFP

It is with deep regret that we record the passing of Lester O'Connell VK2BFP, of Port Macquarie. He passed away in hospital on the 28th of January 1998, aged 68 years.

Lester and his family had lived in Port Macquarie for the last 25 years, after moving there from Aberdeen, near Newcastle, in 1973.

Lester will be sadly missed by his many friends in the Amateur Radio fraternity, particularly the members of the Oxley Region Amateur Radio Club. He was a past Secretary/Treasurer of the club, and for many years produced the club's newsletter, "Oxtales". Lster was in the process of completing the club's archives at the time of his passing.

Sincere sympathy is extended to Lester's wife, Hettie, and to his sons Ian and Ross, and their families in their time of grief.

The funeral will be in Aberdeen on Monday, 2nd February 1998, followed by burial at Aberdeen Lawn cemetery.

A memorial service will be held later at Port Macquarie at a date to be announced.

Vale Lester VK2BFP

That item submitted by Henry Lundell VK2ZHE

Strategy and Planning input wanted

The Strategy and Planning Officer invites submissions from members for suggestions to correct any defects in the Articles of Association of the Division, or for any possible improvements.

Your comments should be forwarded in writing to the Secretary of the NSW Division before February 21, 1998.

submitted by Owen Holmwood VK2AEJ

EXAMINATIONS

The next examinations will be held on Sunday 15 February 1998 at Amateur Radio House, Parramatta. Entries close on Thursday 5th February -- application forms are available from he office - either call in or ring 9689 2417.

WICEN News

The WICEN stand at the Hornsby and District Amateur Radio Club Open Night was a success, with several application forms handed out and members of the public expressing interest in what WICEN does. The Management Committee would like to thank HARDARC for this opportunity, and wonders whether other clubs would like to invite WICEN along for the night, perhaps as a guest speaker.

All regions are requested to have their annual reports in to the Management Committee by 31st March, so that the accounts can be closed off for this financial year. Also, those regions which have not held an AGM for some time i.e. at least in the past twelve months are requested to hold one before that time, to avoid intervention.

The Central Coast Amateur Radio Club is having its annual Field Day at Wyong Racecourse on 22nd February, and Malcolm VK2YVA is collecting names for the roster; please consider giving up a couple of hours of your time to help out, as we are still a few short.

The mid-year conference of the Volunteer Rescue Association (VRA -- of whom we are a specialist squad), will held in Wollongong over the weekend of 21st-22nd March. As usual, WICEN will be represented, and will even find a way of partaking in the upcoming State Wide Exercise, the details of which follow.

WICEN (NSW) will be holding a State Wide Exercise, prior to the commencement of the John Moyle Field Day, on March 21, 1998. Further details will be sent in a mailout to all members.

A reminder for events later on in the year include the Bushwalkers Rogain, run by Malcolm VK2YVA, on the weekend of 27-28th June at a location to be advised just two weeks previous, and the Hawkesbury Classic Paddle, on the weekend of 31st October and 1st November.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer, Dave VK2KFU. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

A mailing list for those interested in WICEN is available; just send the command "subscribe wicen your-email-address" to the address "majordomo@nsw.wicen.org.au", and you will receive further information. WICEN (NSW) also has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". These are generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics.

-- Dave Horsfall VK2KFU, President, WICEN (NSW) Inc.

Winter Games special event

Special event station 8N0WOG will operate from February 7 through February 22 during the XVIII Olympic Winter Games in Nagano Japan. The station will be sponsored by the Japan Amateur Radio League and will be available for operation by amateurs from any country. If you're planning to be in Nagano for the games, don't forget your Amateur Radio licence.

8N0WOG will be at the Nagano City Warm-Hearty (Fureai-Fukushi) Center, 1714-5, Midori-cho, Nagano. Operating hours will be 0930 until 2100 JST. HF bands will include 160 through 10 meters, SSB and CW. The station also will operated on VHF and UHF. For more information, contact Kimihiko Koyanagi, JAOTBJ:

e-mail ja0tbj@mx2.nisiq.net

The JARL News

LF band sought Down Under:

A Wireless Institute of Australia-Australian Communications Agency liaison team plans to submit a new proposal for a ham band in the low-frequency spectrum below 200 kHz. The move follows the European allocation of 135.7-137.8 kHz by the Conference of European Post and Telecommunications (CEPT).

General class hams in New Zealand have been allowed to use 165 to 190 kHz on a non-interference basis since 1990. Australian hams have had to get special permission to operate there. Contacts over distances of more than 150 miles have been made between ZL hams and experimental licensees in VK.

-- QNews

DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, G4BUE, The Daily DX, QRZ DX and Contest Corral from QST. Thanks to all.

PAKISTAN, AP. Hiro, JA1EZM, is QRV from Karachi as AP2AP. QSL to home call.

MOZAMBIQUE, C9. C91JM has been QRV on 20 meters around 2115 to 2340z. His length of stay is unknown. QSL via W7MAE.

COMOROS, D6. Martin, HB9CYN, and Chris, HB9CYV, will be QRV from January 25 to February 6 as D68YN and D68YV, respectively. They plan to operate CW and SSB on 160 to 10 meters. They will also try to make some RS-12/13 contacts using KA mode. QSL to their respective home calls.

KERGUELEN ISLANDS, FT/X. Rene, FR5HR, has been active as FT5X/FR5HR on 20 meters around 0200z and 17 meters around 1400z. QSL to home call.

SAUDI ARABIA, HZ. Ibrahim, 7Z1IS, has been QRV on 20 meters. QSL via SM0OFG.

OGASAWARA ISLANDS, JD1. Aki, JD1AMA, is QRV on 80 meters around 2100z. QSL direct.

MONGOLIA, JT. JU2DX has been QRV on 160 meters from 1800 to 2200z. The length of this operation is unknown. QSL via JT1KAA.

PERU, OA. Cesar, OA4QV, is QRV as OA463QV. This special prefix is to celebrate the 463rd anniversary of Lima. QSL to home call.

BANGLADESH, S2. Andrew, G4VLV, is QRV as S21YE from Daka until March. QSL to home call.

CHAD, TT. Eric, F5JKK, is QRV as TT6JE until May. QSL via F6FNU.

ST. KITTS AND NEVIS, V4. Alex, W2OX, will be QRV as V47KP. QSL via K2SB.

LORD HOWE ISLAND, VK9L. Zbig, SP5EKY, is QRV as VK9EKY. QSL via 7J6AAK.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT

(23 JANUARY - 29 JANUARY)

Issued on 30 January 1998

Summary

Date 23 24 25 26 27 28 29
10cm 97 98 108 100 101 97 94
A 3 3 7 2 4 (9 expected)
T 56 45 46 50 62 53 60

Solar activity was very low 3rd to 24th, and 27th to 28th January; low 26th and 29th; and moderate on 25th, with an M1 flare.

Geomagnetic activity at Learmonth, WA was quiet 26th and 28th; quiet to unsettled on 23rd to 24th, and 27th and 29th; and quiet to active on 25th. There was a brief active period on 29th, and a small sudden impulse was observed around 0530 UT on 24th January.

Ionospheric F2 critical frequencies were near predicted all week.

FORECAST (30 JANUARY - 05 FEBRUARY)

Solar: Low to very low

Geomagnetic: Quiet to unsettled

Frequencies: Near predicted monthy values

Courtesy of the IPS Radio and Space Services

Summary by Pat VK2JPA ANARTS Broadcast Officer

Hunter Branch Radio Group

The first Monday night broadcast from the Hunter Branch Radio group will be held on the 9th February, 1998 -- starting time 7.30 p.m. local. The broadcast will be on the usual frequencies.The first monthly meeting of the Hunter Branch Radio group will be held on Friday the 13th February, 1998. The meeting will be held at the studios of NBN Television, Newcastle -- starting time 8 p.m. local.

Australasian Communications and Computer Association Ltd.

The next meeting of the Australasian Communications and Computer Association Ltd., (or ACCA), will be held on Monday the 16th of February, at the Kirribilli Services Club. This is accessed from Harbour View Crescent, which runs off Lavender Street, Milsons Point.

Members usually arrive at 6.30 p.m. for a meal and then the meeting commences at 7.30 p.m.

Speaker for the evening

Graham Broadbridge is a radio amateur, VK2YUI, and a member of APANA. This acronym stands for the Australian Public Access Network Association Inc. which operates a non-commercial network providing Internet access which covers Australasia.

Graham has been asked to talk about the possibilities for extending this service to radio communications and computer interest groups such as ACCA, AAPRA and the WIA, and how this might be achieved.

With the increasing use of Internet as a basis for international and local communication using both keyboard and digitised voice and video, new directions for communications enthusiasts are seen as essential. Access to such technology and its utilisation are seen as an essential

element for the survival of Amateur Radio and Computer user Groups.

If you have any interest in where Radio Amateur and Microcomputer activity may have to go in the immediate future, come along and hear Graham Broadbridge talk about one potential avenue. Following his talk, it is intended to hold an open forum to discuss new directions for Amateur Radio and computer use. Anyone interested in our future is invited to attend and participate.

The Hornsby & District Amateur Radio Club Inc.

Well, the Open Night is now over for another year, and from the feedback received, it was a success again this year, although, due to unforeseen circumstances, the Marine setup was not available for display. The club also thanks Ryde Regional Radio for being represented at the Open Night.
For those who missed out -- maybe next year.

Next meeting is Tuesday 10th February 1998, commencing at 8.00 p.m. in the Mount Colah Community Centre, Pierre Close, Mount Colah (near the eastern entrance to the railway station). All are welcome.

Remember, the Club will again run classes in 1998, starting in mid March, and the club hopes to maintain the success rate of 1997. For more information, phone the Education Officer Tony VK2BTL on 9487 3383.

The Club net is held every Monday night at 8.00 p.m. on the Club repeaters VK2RNS and VK2RAT. The respective frequencies are 147.250, with a positive offset; and 444.975, with a negative offset. All amateur radio operators are welcome to join in. Listeners, tune your receivers to 147.250.

For more information regarding the Club, or its activities, write to:-

HADARC, PO Box 326, Hornsby, 2077

or phone John VK2WRT on 9807 2490

Liverpool & District Amateur Radio Club

The Club trusts that you all had a pleasant Christmas and New Year break away, and are fully rested for another year.

The next meeting of the Liverpool & District Amateur Radio Club will be held on Wednesday 11th February, 1998.

Members are reminded that they should bring their donations for the club's Field-Day Table to the meeting.

The club meets at the Scout Camp, Cambridge Avenue, Glenfield. The meeting will start promptly at 8.00 p.m.

Visitors are always welcome to the club's meetings.

Mid South Coast Amateur Radio Club Inc.

The club looks forward to seeing you at the Quarterly and 6th Annual General Meeting on Saturday 7th February 1998, at hancock's Ranch, Little Forest Road, Milton.

Arrivals start from 1030 hours, lunch is at about noon, and the meetings will commence at 1315 hours. For those that wish to barbecue, there are facilities available. The club provides tea, coffee, milk, sugar and something to eat at afternoon tea.

To reach the ranch, turn west off the Princes Highway three kilometres north of Milton, and travel to the end of Little Forest Road.

Visitors and families are welcome, so why not come along and enjoy the hospitality offered by the club members.

AUSTRALIAN AMATEUR TELEVISION CLUB INC.

The next meeting of the A.A.T.C. Inc. will be held on February 8th 1998, at 1.00 p.m. - and will be the first one for the year.

Topics for the meeting will include discussion on planning for the Wyong Field Day on 22nd February; and there will be a full demonstration and explanation of the repeater voice ID on our channel 2 of 23cm, given by Dave and Bob.

For more information about ATV, contact Bob the Publicity Officer on (02) 9587 3491 during normal civilised times -- and ring Bob for the Web site URL.

The Australian Amateur Packet Radio Association

The Association has dated its shareware list: here is the list of updates:-

(1) [TBAV 8.03] (Win 95) 28-10-97 -- updated from 8.02
(2) [TPK 1.83c] (DOS) 29-11-97 -- updated from 1.83b
(3) [WinTNC 1.01g] (Win) 2-10-97 -- updated from 1.01f
(4) [WinZip 6.3] Win 3.1 / Win 95] 26-9-97 -- updated from 6.2
(5) [DXNet 3a5] (DOS) 22-11-97 -- updated from 2.30a

There will be some more titles listed next week.

If more information is required about the Australian Amateur Packet Radio Association in general, write to:-

Secretary
Australian Packet Radio Association,
59 Westbrook Avenue,
Wahroonga 2076

or phone:- (02) 9489 4383

BROADCAST ROSTER

Next Sunday, 8th February, 1998

Morning:
Announcer: David VK2NH
Engineer: Eric VK2KUR

Evening:
Announcer: Bernard VK2IDS
Engineer: Jeff VK2BYY

If you would like to submit a news item for inclusion in the VK2 Divisional broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au

The deadline for submissions is 2pm on the Friday preceding the broadcast; if sending by packet or Internet, please allow for forwarding delays in the network.

If sending printed copy, please double space your text, leave wide margins, and use a plain font such as Arial or Helvetica for clarity. Please proofread your text, check your grammar and punctuation, avoid using shorthand and abbreviations, and use the exact words you wish the announcer to say on air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur

True, I got paid to learn the code. Easy for me ?? I don't know about that, after all
when I was 17 I was in Radio School learning the code while the typical 17 year old
was still living at home, borrowing Daddies Olds to go pick up Little Susie and head
for the Drive Inn Movie on Saturday night. I think that was a lot easier than learning the
code.

That was pretty baseless of you to say that I could not cut it as an aerographers mate. I think that is a flying camera man .. ?? But as you brought it up, I took the
standard battery of tests that everyone else did back in those days and was qualified
for any school the Navy had to offer. Matter of fact I was within waiver range for

the Naval Cadet program. Is there something too technical about operating a camera

that you feel is beyond my technical abality ?? The Navy did not think so.

While I am on the subject, I was taking private flying lessons at one time. Damned

old Government insisted that I accumulate 40 hours instruction before I could get a permit. How inconsiderate of them, putting up such a barrier to prevent me from doing what I wanted to, make me spend all that time .. all I wanted to do was fly around
up there. I was gonna fly my Brother around so he could take the aerial shots. He was the
camera guy.

Wish there had been the inter net back then, then I could have gone into a news group
and complained about how out dated the requirements for getting a private permit were .. why I would have soloed at 8 hours, what else did they want. I could get the damn plane up and get it back down at 6 hours. Hell, it was just a hobby to me.

Hi,
Name here is Gerry (WD4BIS) and I have been writing a column for our club newsletter called "New Ham Partner". With the influx of No Code Technicians on the repeater, asking the same kinds of questions I asked 20 years ago, I have been trying to answer them. Some of the articles are technical, some of them are general information, but they all address subjects that our new friends are struggling with.

I have set up a web page for these articles. On this page, I have placed the columns I have already published in past issues of our newsletter.

Doing this on a web page has advantages, the big one being that the articles wont expire in a newsgroup, I can edit or update old ones and add new columns as write them, and I wont have to send re-posts.

The Cost..I will ask that you do not edit the articles (except for the normal formating to fit you newsletters), and use my by-line. If you use them, send me an E-mail and let me know when and where. If you have a spare stamp mail me a copy of your newsletter to Garland Amateur Radio Club (K5QHD). The address for the GARC is on the web page. I really do understand how tight a club postage budget can be.

Where... http://web2.airmail.net/gerryc/newham.html

I am posting this every six months or so to the newsgroups.Four new articles just added bring the total up to 21.

BTW the address for GARC webpage is http://web2.airmail.net/gerryc/garc.html and my personal web page is http://web2.airmail.net/gerryc

Don't tell him that they taught us in boot camp that if you had to abandon ship if you
had a chance to grab a bucket or two of foam. So what it was nothing but ground up bones and blood, it was protein. He doesn't understand the concept of make do with what you have. He might be demanding that steaks be served in the life boats.

>In the same vein, if I, as an owner of a amateur radio store, make it my
>policy to only sell to licensed amateur operators, there is nothing that
>can be construed as discriminatory.

Well it is discriminatory, but it may not be illegal discriminatory
practices. To do so however, I suspect one would have to
have he policy well stated in all advertising and prominently
displayed on signage in the store.

> Possible, poor business practice,
>yes, discriminatory, no.

See above, semantics I know, and I suspect Steve actually
means ILLEGAL discrimination.

>I am well within my rights to restrict sales of
>items on those basis. Provided these rules are applied equally to all

>and everyone I deal with, it is my right to refuse to sell.

Hence the need for a well stated position via signage.

Masa the great has been busy again. I still have yet to hear his signal on the 80m CW band, although I'm there, every night, tuning from 3.500 all the way up to 3.750 MHz...no Masa...

It's really sad to hear this kind of stuff spewing from the mouth of someone who is from Japan, living in Quebec, and being forced to converse in English. Maybe he's trying to get better at English by just spewing forth pseudo-random groups of words he knows, and seeing what kind of replies he gets?

P.S. From reading his posts, I at 29, as a CW operator and supporter of the 5 wpm "hazing ritual" (although I don't think anything faster serves much purpose...if you use it, you improve, period), has personally made his life suck.

I choose to ignore his babble, and use the space on HF which he has so kindly left vacant while he's busy complaining about things via the Internet.

Cutie Boy,

She's probably using a 49 MHz portable phone and the 3rd harmonic is 147 MHz.

Wait for a sale and buy her a 900 MHz cordless phone -- I've seen them for $50! Just explain the situation to her politely. It's probably the the best thing to do for your neighborly relationship.

Ah, we are in an *operational* arena now, Bill, and that is where he is
vastly underinformed. That was properly addressed, as his total lack of
knowledge pretty will rivals yours.

>
> >Note: Yes, we all know that there are *much* better,faster,more

> Not used in emergencies, but still around. Your point?

Bill, you just refuse to 'get' it don't you? I'll rephrase your comment
to install the proper accuracy:

"Not often used in emergencices, but still around and widely available."
That's my point.

I have two chargers for sale:

1) Motorola Overnight Desktop Battery Charger (NTN1174A) with power supply.

2) Motorola Rapid Charger (NTN1171A) with power supply (2580162R01).

Both have battery spacer for different size batteries. Both in excellent
condition. Best offer takes either one or both.
Will ship UPS.

Sincerely,
Chris

My SB-200 (20+ years old) will only develope 1500 volts on the plate.
Would devective/dry electrolytic capacitors on the power supply board
cause the plate voltage to be low? Your best guess please. Thanks.

We are saying that the No-code HF movement claims to speak for this
huge 'block' of no-code Techs, a huge percentage of whom have no
interest in, nor ambitions for HF licensing, since many have lost all
interest in ham radio.(A great many never had more than a mild, passing
interest in the first place.)
We cannot know just how high this percentage is until their 10-year
licenses begin to expire, from lack of interest in renewing them. The
No-Code Agenda claim -implied if not specifically stated- to 'represent'
all of them is bogus and is the "artifical inflation" noted.

I have a Motorola CB Radio (Model CM550) with Sams CB Radio Service Data Book (CB-292). This is a base unit 40 channel AM rig with built in clock/alarm, Mic Gain, Volume, Squelch, RF Gain, PA, ANL, and Mute buttons. The unit is in excellent working condition and looks great!

This is a great collector's piece too! The best offer will be accepted. Then I'll ship COD/insured via UPS.

Thanks for reading this post.

Sincerely,
Chris

> quitting, I worked as a member to change the position of the organization. To
> the credit of ARRL, the League stood up to one of it's largest advertisers and
> stopped promoting the proposal.

-- It is totally inappropriate for ARRL to attempt to dictate Kenwood marketing philosophy, and I don't believe that they made such an attempt. Neither did ARRL "support" the Kenwood marketing plans.... they simply reported it.

-- The FCC (not the amateur community) is responsible for what happens OUTSIDE the amateur bands. (I don't agree with the behavior of the freebanders, etc., but it ain't my job to fix it either.)

With that disclaimer out of the way. . .

.. . .I find myself in disagreement with many well-meaning folks who advocate placing restrictions on the wide availability of amateur radio equipment and supplies. They would like sales of amateur radio equipment to be from only "approved" stores. These are the folks who suggest it be a crime to own amateur equipment without a license, and who are not thrilled about the fact that Radio Shack sells a line of UHF/VHF amateur equipment.

.. . .While it is easy, on the surface, to agree with their goal (keeping amateur equipment out of the hands of bootleggers), I feel the attitude that amateur equipment should be treated as some sort of controlled substance is short-sighted and in fact damaging to our service.

.. . .I live in a large metropolitan area. We have one full line amateur store in town. There are no other similar stores in the whole state. In the four states which border us, there are 2 more amateur radio stores. THAT'S IT! In 5 states, there are only 3 stores! In the whole country, my guess is that there are less than four dozen stores selling amateur radio equipment, antennas, and supplies! It is as though we were some secret society, bent on concealing our presence from the world.

.. . .Not all that many years ago, there were at least 6 electronic stores here in town which sold amateur equipment (not exclusively, but they all had a good selection). Add to that two Heathkit stores, and even the Sears stores sold amateur

transceivers for awhile. (Yes, Virginia, right there along with the Craftsman sockets and Silvertone TV sets.) In the same era, Radio Row in NYC was blocks of wall-to-wall storefronts catering to electronics experimenters. Popular Science magazine had a regular column about amateur radio, and occasional construction articles. Every second little town had an amateur radio club. Amateur Radio was a populist, Joe SixPack kind of hobby.

.. . .During those years it was easy for a person to get interested in being an amateur, to shop around for the best deal on equipment, and to meet an Elmer. We were visible to the public, and well regarded.

.. . .Then somewhere along the line came the magic of 1-800 shopping, amateur radio marketing became streamlined, and radio stores disappeared from Hometown America. With the demise of the local radio store, all the Elmers disappeared into their shacks and newcomers flounder around in fancy four-color ads in back of CQ and QST magazine, trying to decide how to be a ham.

.. . .Rather than continuing to restrict the availability of amateur equipment, as though we were selling assault weapons, I vote for opening up the market. Let's have radios for sale in the strip malls alongside the video games, Lionel trains, and mountain bikes. And it won't hurt if a few of us put on our Elmer-suits and lurk around to spot the likely recruits.

73, de Hans, K0HB

PS: There were less bootleggers back then, in that open market, than there are today in our "secret handshake -- call the right 800-number and take your chances" marketing environment.

>Actually, after speaking with many high level ARRL officials over
>the years, I believe that the ARRL position is based on political
>considerations. The ARRL membership, in surveys and in comments
>to the ARRL board, have overwhelmingly supported retention of
>the CW requirement.

The most recently released survey of the ARRL membership showed
that 54% of the respondents favored retention of a Morse speed test
for US amateur HF access, just over half is hardly an overwhelming
level of support. And 52% supported its removal as an international
treaty requirement, apparently in the belief that each nation should be
free to make its own choice in the matter. And 72% of the respondents
reported that they never or rarely used Morse. Only 27% were regular
active Morse operators. So this is certainly a "do as I say, not as I
do" group.

It should also be noted that demographically ARRL members are
older than US amateurs in general, and represent a declining percentage
of US licensed amateurs (currently around 22% of the total if I recall
correctly). So the responses of ARRL members may not be reflective
of the opinions of the US amateur community in general. Historically,
the ARRL has taken trailing edge positions on issues of positive reform.
That is unsurprising in an organization composed primarily of older
people. ("Set in their ways" is the descriptive term most often applied
to older people, though there are certainly many exceptions.)

>Why? I don't know. The bottom line is that more folks who want to
>keep the CW requirement have expressed their opinion than folks
>in favor of dropping it. I don't think that religion enters into it, unless
>you are willing to assert that most ARRL members are religious/mystic
>in respect to CW.

I believe that they must be. There are no rational reasons to continue
using government power to enforce this "rite of passage", and that must
be what they consider it since nearly 3/4 of the respondents report that
they don't use Morse. If they considered it of real value, they would
practice what they preach. In this regard, FISTS deserves recognition
because they do indeed appear to practice what they preach. But the
value of Morse is an article of faith to both celibrants and non-celibrants
alike. It certainly isn't borne out in deeds by the majority, and there is
scant evidence for its technical merit. In fact there is overwhelming
evidence to the contrary that the majority refuses to acknowledge.
Now that's a clear sign of religious or mystic belief, IE refusal to be

swayed by demonstrated fact.

>The other political element is that proficiency in CW is by international
>treaty a requirement for access to the HF ham bands. The recent WARC
>conference *might* have been an opportunity to reverse this, but the
>pro-CW folk out-politiked the anti-CW folk.

I don't think that's the case. I believe the stated reason is the truth, IE
there was too much more important work to be done to allow the matter
to be considered. Lets face it, amateur radio is not a high priority with
the world's telecommunications authorities. I'll be pleasantly surprised
if they find time to consider it in 2003. That's mildly discouraging, but
it doesn't prevent us from flattening the Morse speed tests in the
meanwhile. The international treaty does not specify a speed, and
certainly not a staircase of speeds. There is no justification for
segregating amateurs using the same modes and power levels from
using the same frequencies merely because of an unrelated Morse
test speed, IE there is nothing qualitatively or quantitatively different
about operating on 14.173 MHz which requires a faster Morse test
than operating on 14.177 MHz. The current divisions are completely
capricious and arbitrary.

>Gary's excellent rational arguments are all good reasons to drop the
>CW requirement from the license tests. Gary's assertion that rational
>discussion is the only way to resolve the issue is obviuosly not true.

That isn't actually what I said, or if that's the way you read it, it isn't
what I was trying to say. For me, rationality is the key. And I try to
limit the bulk of my comments to a rational and technical level. That
is only one side of the issue of course. There is also a large component
of irrational and emotional argument in the debate. That *shouldn't*
carry any weight, but unfortumately it does.

>Unfortunately, as the events of the last few weeks in Washington
>demonstrate, politics is rarely rational. The continuance of the
>CW requirement is a political decision. Thus, any resolution to the
>issue must also be political in nature.

Yes. It is my hope that rational and technical points will contribute
toward a positive political resolution, but I agree that politics is
often swayed by irrational and emotional posturing in the face of
overwhelming rational and technical merit to the contrary.

>FWIW, the CW requirement for issuance of an amateur radio license
>is an anachronism. Gary's technical reasons support this. Also, if
>Amateur radio remains mired in the technology of the 1970's, it will
>soon be replaced by a part 15-like system or an expanded CB-like
>service where manufacturers can get rich selling fancy rigs and
>30 feet high, 20dbd gain verticals for 160m. (160m so that my posting
>is at least *marginally* on-topic! ;-))

Some would say we are already there. And that does concern me.
When Morse code speed is held up as the most important measure

of the highest qualifications and aspirations of a radio amateur, there is something fundamentally sick going on. We have a system which incentivizes the wrong things, and for the wrong reasons. It shouldn't come as a surprise that those incentives work, and that we've developed a mass of amateurs since 1968 with the wrong skill sets and the wrong outlook to advance into the 21st century of wireless communications, though they are certainly well qualified to address the 19th century.

>If the majority of hams really wants the CW requirement to go away,
>they need to start speaking out en mass. Otherwise, it'll go away only
>when Amateur radio goes away - which I fear will be soon.

I hope it won't be soon. I have too many things left yet to do with amateur radio. There is so much that is exciting which is yet to be done with signal design and coding in amateur radio. We're entering an era of wireless communications where the bulk of the advances will be via firmware and software. That's the ultimate cottage industry, and amateurs can participate at the very highest levels. We are at no disadvantage to the corporate worker in his cubicle. In fact we have a very great advantage in that we are free to take the road less travelled without concern for quarterly reports. In other words, we have the only true freedom, the freedom to fail. We don't have to stick to the safe, the tried and true, we can actively experiment with radical new approaches. If we fail, our families won't starve. But if we succeed, how exciting those successes are.

The Ah Ha! moments when something new finally works as intended, or some new insight is gained, are the greatest pay we can hope to receive in life. They are why I became a radio amateur and why I remain one. I hope for an amateur radio where my grandchildren can have the same freedoms and experience the same satisfactions. But I fear that won't be so if we continue to turn amateur radio's face toward the past as a historical re-enactor rather than toward an experimentalist future.

The new KB8UYZ Amateur Radio FTP Server is now online! We have thousands of files online, including radio mods, frequencies, satellite tracking
software, logging programs, morse code programs, and much more! We also plan on updating the archive at least once a week, so visit again for new files!

If you have any files to contribute to our archive, let us know about them. We will then send you instructions on how, and where, you can upload the files.

The FTP Server can be accessed via the following ways:

WWW: http://megaman.dhcom.com/hamradio
FTP: ftp://megaman.dhcom.com/hamradio

In time, we expect to have an index for each directory on the server, to help you better find files that you need.

The other comments in the thread are off on tangents. Case law has
nothing to do with this thread. If I own an amateur retail store and
post the following

OUR POLICY IS TO SELL ONLY TO LEGALLY LICENSED AMATEUR RADIO OPERATORS

there is nothing that can be done, legal or otherwise. You are confusing
discriminatory practices based on race/color/ethnic background, etc.

I
>believe CB radio has its place. But a loosening of requirements, any
>requirements, for licensing will have the effect of allowing more unskilled
>and uninformed persons on the air.

To decide whether changing or eliminating a requirement is
in fact a loosening or lessening of entrance requirements one must
exam the purpose and value of the requirement. When it was no longer
necessary to show how to hand crank a car to get a driver's license,
was that a loosening of requirements? One needs to look at the
privileges granted and the skills necessary to safely utilize those
privileges. In doing so with the amateur service, what one finds
is that what makes the amateur radio service unique among radio
services is the privilege to build, modify, or use non-type accepted
transmitters. Yet the one licensing requirement that is unique
is demonstrating knowledge of Morse Code. Wouldn't it seem
to make more sense to focus our licensing requirements on
the privileges that are unique to our service?

>This is not per se a bad thing. In this
>case, good and bad are judgment calls, it depends on what kind of hobby
>and radio service you want. Consider this: do you think it would be a
>better or worse ham radio if all the tests were just replaced by an
>application to be sent to Washington with a $10 filing fee?

If we want a 1960's style CB service, that would be fine, as it is
commensurate with the privileges granted. Allowing use of non-type
accepted equipment requires the demonstration of knowledge
necessary to adhere to the requirements type-acceptance was
created to address. Give up on using non-type accepted equipment,
and maybe you're proposal isn't so perposterous.

>Believe it
>or not, some people agree with you on this and others do not. It depends
>on what kind of hobby you want radio to be. For many of us, a ham radio
>license is an earned reward for study and practice. And isn't a

prerequisite
>for getting into the hobby.

That's because too many have their egos wrapped up in licensing.
What low self esteem they must have to have to use something
like the class of license to bolster it.

>Cleaner from a language usage standpoint but dirtier from a standpoint of
>being populated by unskilled and uninformed people. This effect isn't
fully
>realized yet, of course, because there are so many knowledgeable people

>few lids on 75m represent the whole of HFers. You must listen to 160, 17m,
>15m, 30m, all the HF bands to make the overall representation.

Any the percentage of technical conversations on those bands is still
far lower than that on 2 meters. True you don't have people saying
"Hi honey, please pick up some bread on your way home" on HF,
but you also don't have a perponderance of "How are your gallbladder, Joe?"

>Oh, by the way, the "foggies" as you so call them who use bad language
>on SSB are NOT USING CW! They practiced enough to get an HF
>license and dropped it for the less respectful mode of SSB. This should
>tell you something. Maybe not.

Listen in on a heated pileup on CW and listen for ..-. ..-
In case you hadn't figured it out, modes aren't more or less
respectful, people are. The mode is just a mechanism
for conveying information as any basic text in communications
will tell you.

>had to remain below 200m.

>Jeff KH2PZ, H0CW

Don't know about 1923, but in 1963 RM-499 and dozens of others were placed before the FCC. At that time licensing was simple Novice, Tech, General/Conditional, and extra. Most new hams aiming at HF went the Novice route 1 yr and if you don't upgrade then the license expires. Tech was mostly for VHF types. General/Conditional was the normal license. Conditional being given to those remote from FCC licensing sites. Extra was 150 questions where you had to draW diagrams etc. and 20WPM. Few got the extra and most were broadcast or electronic industry pros. The Extra today is easy compared to 1963!

ARRL wanted several things....The return of the advanced (Class A) to operate the prime SSB/AM bands. They also wanted a tougher tech exam. and they wanted more building. Unfortunately Wayne Green and several dozen other petitions were joined with the ARRL proposal and the incentive licensing got out of hand. FCC proposed taking away most of the CW and phone bands for extra and advanced (bottom 50 Khz of each CW would be extra only and most of the phone portion would be advanced with three 25Khz ranges extra only SSB). This meant the average general had to take the advanced to keep phone freq's and the extra to keep CW. The FCC did back away from about 1/2 of the restricted bands but many hams got mad and either quit ham radio or the ARRL or both. ARRL membership plunged and USA amateur radio growth stopped (it had been running at a healthy clip). ARRL's growth is finally recovering 35 years later and amateur radio has 700,000 licenses in the USA but many are clubs, inactive, and estimates of 20% unrerported silent keys. W5YI quoted probably about 250,000 active USA hams in reality.

Fairly new segments of the hobby such as boatanchors and satellite have brough back many of the hams lost in 1963 to 1967. Seems

building and tinkering was not out of style just removing freqs that generals already had proved to be the killing field (so to speak). Many went ahead and got the upgrades but trust in the ARRL and the FCC took time to return.

I don't feel the ARRL will ever get into this type disaster again..but we all need to be members to elect Directors that will vote our interests. Plus ARRL is the only official representive to the FCC and WRC.

> up with these wild ideas?

Actually, in the advanced theory test you are tested on some of the more exotic modes. Packet not included at this time.

In an emergency it may be necessary to get a message out to anyone who can receive it. Equipment or band conditions may make it possible that the only way the message can be sent is in CW. Communicators around the world know that if they go to the hf ham bands and start sending, there is a good chance that they will be picked up by one of the hundreds of thousands of hams world wide that can copy CW. If doing so saves one life then the world wide requirement is worth it.

Well at least that is one way to try it. Of course there will be others just doing the opposite so you had better have some sound reasoning behind your demands other than you are just too lazy to get your code speed up. Of course you can always petition the FCC yourself to do the same thing.

> I really don't care
> what, if anything, they replace it with.

You want to get rid of the CW requirement so bad you don't really care if they replace it with something that might end up being much harder. Heck I have an idea. Rather than a CW requirement, why don't they just require a person to put up $50,000 to hold for any costs the FCC may encounter when they have to track down some of the garbage operators. That sounds good to me.

> Get prepared to move over, old

You tell 'um Dick, don't forget the alien invasion. :-) I can easier
visualize getting killed in my truck because I wasn't wearing a crash
helmet. Do you believe in requiring crash helmets for all vehicles?
If not, you have no reason to believe in requiring CW for all HF hams
because compared to deaths from head injuries in car wrecks, saving
a life with CW is a microscopic possibility.

Horses are still around too Dick but I'm not going to keep one around in case my car breaks down in an emergency. Citing the need to save the day , when all other communications fails is a fallacy, that has been perpetuated only because it it getting harder and harder for the ARRL and the pro-code agenda crowd to justify the excessive Morse Code Requirements. It may make a good twist in in Hollywood movie plot but it has very little validity in real life anymore given the number of digital choices available today.

Remember Dick. This comes from the same great mind that told us that nobody should need to learn anything outside of their narrow field of what ever career they have selected. Anyone who can't waste their time in school with things like history is sure not going to have much in the way of visualizing beyond that narrow tunnel they have made to be their world.

Well, that is because CW is aural not visual. Nobody that has learned code thinks of it in terms of dots and dashes. Nor do they write it as such. The dit dah sound is written as the letter A. Simple as that.... Now you only have to learn the next 40 some required characters and you will know the code....

Consider those who only have email access to the group. Pointing them to one of Rod's web pages is useless to them. Giving a succinct answer is not. I suppose seeing Rod answer questions day after day with only a pointer to his web pages finally set me off. What I'd consider a good answer would be to briefly address the substance of the question, then, if appropriate, point to a web page where more information might be found by those with browser access.

Now it is true that Rod has a wealth of information on his pages, but the way he answers questions appears to be just an advertisement for those pages, apparently intended to run up his hit count. At least that's the way it comes across even though that probably isn't his intent. I'd like to see him actually type in some original content to his posts from time to time rather than always acting like an autoresponder message from a spammer.

Note, I'm not calling Rod a spammer, it is only that his replies appear to resemble some of the stuff propagated by spammers trying to lure you to their web sites. I'm sure Rod is a good guy just trying to help. Blah Blah Blah But it doesn't *look* that way to someone on his fifth cup of coffee and already in a bad mood.

Ohhh, cmon, Drew. You're beating a dead horse. I DID stipulate that Kenwood did have every right to sell their product at truck stops. For that matter, they can sell them at the 7-11 or the laundromat. They have the right and I did not say they didn't.

We also have rights.. one of which is to
>vote with our dollars and other
>forms
of power on Kenwood's idea for
>truck-stop sales. You think that you
>should be

able to buy a ham rig at a
>truck stop. No problem. I think it is

>amateur
operators, and their numbers are growing. Many use 2m simplex in
>their rigs
and a smaller but increasing number are also receiving 10m
>(Tech-Plus)
privileges.

Nobody denied anybody anything. If Kenwood listened to the League's objections, what is wrong with that? Presumably they would listen to Drew the Majority also, if he insisted that the League's position was that of the minority. Kenwood did not have to listen. That they did was obviously a business decision motivated by good old fashioned capitalist greed, the only thing that will keep any firm in a competitive market viable, and they are to

be commended for it. If I am wrong and it was a bad business decision, well, tough. But they did not have to listen to the League if they didn't want to.

We, the League, can refuse advertising business
>from whoever we
>want for
whatever reason we want. We can even boycott
>products if we choose.

I'm not sure about that. If Kenwood wanted to pursue
>the issue, they might
have grounds for a discrimination suit. You are
>excluding them from
advertising a legal product for sale, simply because of
>the location at which
they propose to sell it. This would be similar to
>retailers that refuse to
sell to unlicensed persons. Discrimination suits
>have been successfully fought
against these merchants because the law does
>NOT require a license for purchase
and so denying the sale is a form of
>discrimination.

Better ask a lawyer about that, Drew. I think QST can accept or decline business from whoever they want. If I don't like it, I will use my vote to try to change it. That's the way we do things here. By the way, they are free to try, and should do so if they think it is a good business decision. No doubt they will, if they think (Am I repeating myself? tsk tsk) it is a good business decision.

>You are
free to tell Kenwood to please go ahead and sell at
>Truckstops. You
>are also
free to either join the League and try get the
>policy changed, or
>elect those
who agree with you, or offer advertising to

Nobody said anything about modifying the radios. You are
>making the incorrect

and discriminatory assumption that all potential
>customers of amateur radio
equipment at a truck stop would be purchasing them
>for illegal purposes. This
is simply not the case. And once again, even if
>SOME of the purchasers do
indeed use their equipment for illegal purposes,
>this is not the responsibility
of the retailer. Let's take some
>responsibility for our own actions, instead
of blaming society, the white
>man, the black man, the liquor store owner, the
cigarette companies,
>McDonalds coffee, or the truck stop which sells amateur
radio
>equipment.

OK, I will stipulate that I may have made a false assumption. Nevertheless I will not make it easier for those outside the ham community to do what I falsely assumed that some of them might do.

I still hold to the original paragraph less the last part regarding mods. You are indeed a free agent and can tell Kenwood to go ahead and sell ham rigs at truck stops. Do tell them that you represent the majority, and that the League's position is that of the minority. That will probably sway them to your view. Have you written Kenwood? Maybe sent them a petition with a few thousand signatures? They will be really impressed if every signer also includes his call sign. Then they will know that they have the support of the amateur community, their major market for amateur equipment.

Again, Kenwood made a (here I go again) business decision. Their motive was profit, as it should be. Maybe they were wrong, maybe they were right. The League did nothing wrong, and neither did Kenwood even I am wrong and their decision was not a sound one. They took the course of action they thought best.

You don't get it, do you, Drew? I am a seaman. I am the Bosun on a ship. I also have some little experience in RF and have more than a few licenses and certificates issued by the FCC and USCG. Check my web page for an almost complete listing. If you insist, I'll go back and put numbers and expiration dates there. I do a fair bit of listening around the bands, because I can decipher those cryptic deebity-beep sounds. You have probably never been on a ship, unless it was a Navy ship or you were a passenger. Tell me more about it, though, because I have only been doing this for 20 years or so and couldn't possibly know what I am talking about with such a small amount of experience.

Few US FLAG ships use CW... by my estimate, only about a third, and that will drop way down by the end of '99. However, US flag ships are a very tiny minority of the maritime trade. We have fewer than 200 ships left in commercial trade. The thousands and thousands of FOC ships still mostly use CW for routine traffic as for them it is cheaper than buying a full suite of GMDSS compliant gear and having a certified shoreside maintainance contract. They won't switch until they have to.

Note that all MARAD or MSC owned, chartered, or operated ships are still required to have R/Os aboard when operational. They must have at least a 2nd class Radiotelegraph Operator's Certificate issued by the FCC before the USCG will issue them a Radio Officer license. That means they must be able to copy and send at 20 WPM. A Radiotelegraph station is still required on these ships. CW is still the cheapest way to send AMVER, for instance... it is free if sent by CW. I have never met an R/O who did not prefer CW over other modes and who was not proficcient from daily use.

Again, listen to the maritime bands. Tell me what you hear is a "few" ships. Make a few intelligent observations before telling me about my business. In fact, do it for about 20 years.

Hmmmm... by that logical argument, If I have a ham radio store, I could be sued for refusing to sell #2 Diesel, by the same trucker who sued the truckstop for not selling him a Ham rig. I wish I could buy toroid cores at Radio Shack, but they refuse to stock them for me. I better call my lawyer. And wouldn't it be nice if I could get Pizza down at the Whataburger? The nerve of those people! I'm gonna sue! WalMart is gonna be in a world of trouble, too, if they don't start stocking more computer stuff. I'll take them to court. Those guys are gonna pay!

Thanks for the idea, Drew. Did you know you can't buy groceries at the hardware store here in San Benito? Well, you can't! Sounds like a bad business decision to me. Not only that, but it is discriminating against people who eat, and farmers who grow food, and processing companies, packers, wholesalers. etc. I would like to be able to go down to Sears and buy a new humvee, too, but those idiots are gonna pay, because they refuse to sell me one. And those idiot car dealers-- do you think they have the common courtesy to have clothes in stock, In case I happen by and need a couple of new shirts? nooOOOoooh! Well, I'm calling my lawyer if they continue to discriminate. How dare they?

Drew do you know what a Ship looks like?

Yeah, he does. They are big wooden jobs with a bunch of bedsheets tied up to all these long masts, and all these ropes and stuff for climbing around on, and they got all these rows of holes in the sides with cannons sticking out of them. They are usually run by a gent in a frock coat with a silk sash around his waist, into which are stuck a pair of single-shot .60 caliber black powder pistols. Invariably he has a peg leg and a parrot sitting on his shoulder. He saw it in a movie once.

They also all have a complete suite of GMDSS compliant communications gear. All of them.

Yes, after it became clear that their much more restrictive proposal would be defeated ... then they put the spin doctors to work in an effort to make it look like it had been their idea all along ... such liars!

Why is communicating by hand and WITS using the simplest
transceiver important? When, if at all, has such a situation
been involved in any emergency?

>Our job: GET THE JOB DONE, GET THE MESSAGE THROUGH. PERIOD.

>WE can communicate when there's nobody to rely on but OURSELVES.

And it has been and will be done using equipment on hand,
not anything built in the extreme of a real-time emergency
response effort.

>Our KNOWLEDGE and COLLECTIVE ability to communicate is unique.

I suspect, that while that would be a great accolade if it were
true, the reality is that there are thousands of non-hams that
possess this ability also.

>Each of us is an INTEGRAL part of the puzzle.

If and only if one actively participates in emergency
preparadness. Very few hams have suddenly risen
to the occasion in an emergency unless they have
previously been an INTEGRAL part of the team.

And you should be able to use and enjoy CW. That's
your choice. No one wishes to deny you that.

>LOOK for a second. "WHY ARE WE HERE?"

See Part 97.

>Knock out cell phones, and "society" can't handle it. Knock
>out a repeater station, and WE DO know what to do.

Actually, there's much more to communications than
just cellphones. Society can do quite well without
them. That doesn't dimiish the value of hams, but the
value is only maximized by prudent preparation, not the
idealistic expectation of individual hams.

>What we can offer, and DO offer, to the world is a bunch of
>well-trained operators who can interoperate well. Morse is
>even today a viable part of that picture, as are SSB, AM, FM,
>Packet, RTTY, AMTOR, PACTOR, Packet, Clover, and others.

With all due respect, the reality of morse use as part of the
picture hasn't been the case at all except as a recreational
aspect of ham radio.

Sorry, but you totally misapplied the legal issue presented by
CBRambo. No business can be forced to carry a product simply
because YOU want it so. However, if a business carries a
particular product, they can not discriminate by selling to some
and not others UNLESS there's a legal reason to so discriminate.
As ownership of a ham radio requires NO license, there's no
legal restriction to prohibit anyone from purchasing a ham radio.

The reality is many of us owned ham radios before being licensed.

In the same vein, if I, as an owner of a amateur radio store, make it my policy to only sell to licensed amateur operators, there is nothing that can be construed as discriminatory. Possible, poor business practice, yes, discriminatory, no. I am well within my rights to restrict sales of items on those basis. Provided these rules are applied equally to all and everyone I deal with, it is my right to refuse to sell.

Drew's continued call for legal action(s), IE:, this, the famed schoolyard incident and of course the use of the courts to banish code testing are just continued examples of this countries infatuation with litigation Call 1-800-lawyer if you've ever been injured due to your own stupidity.

Check my post, Drew. I suggested looking at Ramsey's catalog. I like to recommend their kits because they are easy for a new builder to put together end get running, and there is usually room on the boards for lots of mods. I have a transmitter and receiver somewhere that are Ramsey kits. Only thing I added was diode QSK. Anyway, I suggested Ramsey, and two simple homebrewing approaches. I also warned him about causing illegal interference, something you neglected.

Yes, Drew. I believe I mentioned that possibility. I also mentioned that if it was a ham that he would probably try to resolve the problem. What I did not mention was that if it is a CB, running legally or not, that he would be very unlikely to resolve anything. Not that many CBers are hip to PI output networks or high-pass TVI filters.

thanks Ed

Conventional wisdom was that nicads exhibit a "memory" effect. After numerous partial discharge/recharge cycles, they have a tendency to not accept a full charge. I have noticed this effect with the UHF HTs we use on my ship for intra-ship comms. I always keep my charged spare in a pocket, and only change it out when I have to. Then, first opportunity, I put the fully discharged battery in my charger. I seem to get consistently longer life out of my batteries than anybody else. I have gotten over 20 hours of use out of a battery, though I don't yak when I don't have to and that certainly helps.

There are those who say that is a lot of crap, and no doubt some types of rechargeable batteries have better charge cycle characteristics. You might have NiMH batteries, I don't know. If you think there is something to this memory thing, just be sure to completely discharge your battery every once in a while before recharging. A better option might be to get a spare battery pack if your budget can handle it.

>
Navigation is done by the Satellite and Loran.

Well, Navigation was never done by CW, Drew, so... your point?

However, Satellite and Loran are not the only means used for navigation. The old man on MY ship gets pretty ticked off if he never sees a sun line, a LAN, a star fix, whatever. Celestial is still going strong. They have not shut down the moon or planets yet. Stars are still shining. Come morning or evening twilght, there are sextants, hack watches, almanacs, and HO 229 out all over the North Atlantic. Old fashioned? Yes. Still relevant too. Still used, and still tested on by the USCG for all holders of Ocean Deck Officer licenses of all grades. A few optional refinements are getting more popular, chiefly handheld navigation computers. They are still doing the same thing we used to do on paper, though... converting Hs to Ho, calculating Hc and Zn, and deriving altitude and azimuth for an LOP. Crossed LOPs, advanced or retarded to time of fix, give a position. We do more than just look at a box and scribble down some numbers and draw an "X" on a plot sheet.

One of the most basic tenets of the art of navigation is that no single means of position determination shall be used without checking against another method. Ever try to use a Loran halfway across the pond? I thought not. Now... do you have another lesson for me on the fine points of blue-water navigation? Stick to CW, a topic you know more about.

OOPS! Sorry Drew, I naturally assumed that was your post. My apologies.

"I wanna hear him TALK TOUGH!!"

Unless you USED a ground plane. You would not lack one if you used one.

You would not need a groundplane if you used a dipole. Feed it directly from the transmitter. Resonant length of a 107 MHz dipole is 4.37 feet. Just a smidgeon of loading and PRESTO! you have a dipole. Is that legal enough for you?

A groundplane could be as simple as a mag mount on the fridge.

I never really though about it, and this approach is a little simplistic, but I
guess you could just use a diode to rectify the signal, run it past a filter
capacitor, and then measure the end product.

An O-scope is usually used for measuring RF signal characteristics.

I did not say it would not perform quite well on 27 MHz, though the output filtering would benefit from some tweaking. I said it would not make a CB, whether a good one or even a bad one. It would not be a CB radio. A CB is only capable of 4 watts AM, 12 watts SSB, and has fixed channel tuning only. It cannot transmit off channel or out of band. A TS-180 would not even be recognizable if modified to these standards. A ham rig modified to transmit on the CB channels is not a CB. If it is actually used to transmit on CB channels, it is only an illegally used transmitter.

The poster is better off selling it to a ham and buying what he really wants... a good CB. Alternately, he could get a license and use his rig legally.

>a non-rational and non-secular requirement.

Actually, after speaking with many high level ARRL officials over
the years, I believe that the ARRL position is based on political
considerations. The ARRL membership, in surveys and in comments
to the ARRL board, have overwhelmingly supported retention of
the CW requirement.

Why? I don't know. The bottom line is that more folks who want to
keep the CW requirement have expressed their opinion than folks
in favor of dropping it. I don't think that religion enters into it, unless
you are willing to assert that most ARRL members are religious/mystic
in respect to CW.

The other political element is that proficiency in CW is by international
treaty a requirement for access to the HF ham bands. The recent WARC
conference *might* have been an opportunity to reverse this, but the
pro-CW folk out-politiked the anti-CW folk.

Gary's excellent rational arguments are all good reasons to drop the
CW requirement from the license tests. Gary's assertion that rational
discussion is the only way to resolve the issue is obviuosly not true.
Unfortunately, as the events of the last few weeks in Washington
demonstrate, politics is rarely rational. The continuance of the
CW requirement is a political decision. Thus, any resolution to the
issue must also be political in nature.

FWIW, the CW requirement for issuance of an amateur radio license
is an anachronism. Gary's technical reasons support this. Also, if
Amateur radio remains mired in the technology of the 1970's, it will
soon be replaced by a part 15-like system or an expanded CB-like
service where manufacturers can get rich selling fancy rigs and
30 feet high, 20dbd gain verticals for 160m. (160m so that my posting
is at least *marginally* on-topic! ;-))

If the majority of hams really wants the CW requirement to go away,
they need to start speaking out en mass. Otherwise, it'll go away only
when Amateur radio goes away - which I fear will be soon.

Dwight this may come as a big surprise to you but, all us code copiers at one time or another were not code copiers. We must not have felt it was a barrier, rather something we had to work at to attain an end.
I will assume that you have a job, if I may, and ask you do you feel that going to work is a barrier to your desired style of living, or do you see it as a means to an end, and go ahead and work at it.

So for you if HF is the end, then learning code is the means. Quit your bitching, get out of the NG, turn on the code tapes, suck in a deep breath, wipe the sweat off your brow and dig in. It won't hurt but for a litlle while. Who knows, you might learn to like it.

On the other hand, a good typist and a system such as pactor will out perform two Morse operators, (even ignoring the superior performance of this mode in noisy environments) where large volumes of traffic are concerned. Why? Because only one human operator is involved, halving the chance of error. If you wish to compare a alphabetic mode like Morse for record traffic, it should be with another alphanumeric one.

The original thread related to conversational exchanges, which is completely different.

Regards,
Mark.

------------------------------------------------------------------

Elmers List Formatting Standards

In order to standardize the Internet resource notation used in this
Directory, I've decided to adopt Uniform Resource Locator (URL) format
throughout. In addition to being a straightforward, human-readable,
format for specifying File Transfer Protocol (FTP) archives, Gopher
and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also
amenable to formatting as hypertext links in Hypertext Markup Language
(HTML). For example, users viewing this document at designated
World-Wide Web Servers (see "How may I obtain the latest copy of the
Elmers List?" below) will see all URL's converted to hypertext links
on their WWW client. Rather than fumbling with the various conventions
of FTP, Gopher, WWW, and Usenet News software, the document or
directory referenced by a hypertext link is but one mouse-click (or
key-click) away.

While I'm happy to incorporate the latest and most popular
information-formatting standards into the documents that I maintain, I
really can't allow myself to be dragged into the role of a WWW
help-desk for all of the Internet. Please understand this when I
```

politely refer you to other Elmers, easily-obtainable on-line documentation, or even local expertise such as resident gurus, consultants, or help-desks at your school, company, or information service provider.

The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software or "browsers".

For more information about URL formats, see:

http://www.w3.org/hypertext/WWW/Addressing/Addressing.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis E. LeMay (K0GRL, W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1946-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs, including those within TAPR (Tucson Amateur Packet Radio), have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and-forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

What is an Elmer?

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer Today?

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

How do I become an Internet Elmer?

With the ever-widening scope of the Internet, the amateur radio newsgroups on Usenet, and now the World-Wide Web, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I maintain a list of such Elmers. Volunteers may register via my formatted, on-line, World-Wide Web Registration Form:

http://www.novia.net/~pschleck/elmers/register.html

I would prefer that you register using the above form (which not only ensures that nothing is omitted, but also makes adding your entry much easier by automatically converting it to HTML). However, volunteers who are not yet on the Web are also quite welcome, and may register by writing me at elmers-request@novia.net with their name, amateur radio callsign(s) (if any), E-mail address, and area(s) of expertise. URL-format pointers to resources they maintain, such as WWW home pages, FTP archives, mail servers, or mailing lists, would also be quite welcome. The list has gotten large enough that there should be plenty of suitable examples to model your entry after. If you need some further assistance formatting your entry, drop me a line and tell me a bit about yourself. Ironically, sometimes the best Elmers write to me saying, "I'm not an expert, but..."

I have set up an administrivia mailbox for correspondence related to this list (elmers-request@novia.net, the default Reply-To: of this message when posted to Usenet News). I would prefer that all such correspondence be directed to that address. In addition to saving it into a special folder, my incoming E-mail filter will also send you an automated return-receipt.

Also, an unfortunate increase in the amount of unsolicited junk-mail that I receive (often dozens of messages _every day_) has forced me to become much more ruthless about filtering incoming E-mail. While I can guarantee that I will read all mail sent to elmers-request before the next month's posting of the list, mail sent to pschleck may not only

not get reviewed for some time, my incoming mail filter (procmail) may even throw it away if it can't be automatically categorized as originating from known, friendly senders or have known, welcome keywords in the headers ("Elmer" is obviously one of those keywords).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?

There are currently 6 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use the Mailing-List or Mail-Server options:

World-Wide Web (WWW):

This is the recommended method for accessing the Elmers list, as it allows this resource to be viewed as hypertext. The home site at www.novia.net features immediate updates each month, hypertext-linked subject and geographic indexes, keyword searching, and registration and feedback forms. The other two sites use automatically-converted versions of the Usenet news articles, but are still usable, particularly if you are outside North America. The site marked with an asterisk also offers Wide-Area Information Service (WAIS) index searching by keyword for all Usenet News FAQ's:

* http://www.novia.net/~pschleck/elmers/
* http://www.lib.ox.ac.uk/internet/news/faq/rec.radio.amateur.misc.html
* http://www.cs.ruu.nl/cgi-bin/faqwais *

(_Note:_ Because of maintenance problems - FAQ documents not being promptly updated in particular - the sites at Ohio State and Smart Pages are no longer recommended for accessing a current copy of the Elmers List and have been removed from the above list.)

see also the newsgroups under comp.infosystems.www.* (I haven't listed URL's for all of the newsgroups under this hierarchy as there are now about a dozen of them (!!!).)

Usenet News:

This was the original distribution medium for the Elmers list. It continues to be supported for users who cannot access the World-Wide Web. Since the document uses URL's throughout, the news article version may also be viewed as hypertext via some mail and news readers. The latest copy of the list can be found in the news articles with the Subjects of _"Amateur Radio: Elmers Resource Directory [A-*]," "Amateur Radio: Elmers Resource Directory [*-*],"_ and

"Amateur Radio Elmers Resource Directory [*-Z]" (The * represents a wildcard character, as the need to split the list evenly, as well as keep all parts under the 64K message limit for Usenet, requires that I adjust the split occasionally). Since the list is cross-posted to the following newsgroups:

* news:rec.radio.amateur.misc
* news:rec.radio.info
* news:rec.answers
* news:news.answers

on the first Monday of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or "usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

Anonymous FTP:

If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

* ftp://ftp.novia.net/customers/pschleck/elmers/
* ftp://ftp.cs.buffalo.edu/pub/ham-radio/
* ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/
* ftp://ftp.uu.net/usenet/news.answers/radio/ham-radio/elmers/

Internet Gopher:

The latest copy of the list should be available from the following Gopher sites:

* gopher://jupiter.sun.csd.unb.ca/
* gopher://gopher.univ-lyon1.fr/
* gopher://ftp.win.tue.nl/
* gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

Mailing-List:

Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

Mail-Server:

If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

ftpmail@ftp.novia.net

and in the BODY (not the Subject) of the message, write:

```
open
get /customers/pschleck/elmers/README
get /customers/pschleck/elmers/index/subject
get /customers/pschleck/elmers/index/geographic
get /customers/pschleck/elmers/list/part1
get /customers/pschleck/elmers/list/part2
get /customers/pschleck/elmers/list/part3
get /customers/pschleck/elmers/list/part4
get /customers/pschleck/elmers/list/part5
get /customers/pschleck/elmers/diff
```

Alternatively, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

```
send usenet/news.answers/radio/ham-radio/elmers/README
send usenet/news.answers/radio/ham-radio/elmers/index/subject
send usenet/news.answers/radio/ham-radio/elmers/index/geographic
send usenet/news.answers/radio/ham-radio/elmers/list/part1
send usenet/news.answers/radio/ham-radio/elmers/list/part2
send usenet/news.answers/radio/ham-radio/elmers/list/part3
send usenet/news.answers/radio/ham-radio/elmers/list/part4
send usenet/news.answers/radio/ham-radio/elmers/list/part5
send usenet/news.answers/radio/ham-radio/elmers/diff
```

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

Acknowledgements

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users,
for making this service a success.

Amateur Radio: Elmers Resource Directory

More information about this list can be found in the companion posting
to this file, "Amateur Radio: Elmers List Info and Administrivia."

73, Paul, K3FU

- A -

John Ackermann N8UR

jra@febo.com

http://www.febo.com/

My primary interests are in packet radio network building
(particularly higher speed stuff) and TCP/IP. I've got quite a lot of
info on using the Kantronics D4-10 19.2kB radios, as that's the
hardware we've been struggling with here.

I'm now working heavily with Linux, and help run a TNOS/Linux BBS, and
a Linux native-AX.25 switch. Although I'm not "the world's greatest
authority" on either, I'd be happy to help folks with questions to the
extent I can.

I've developed some experience with full-duplex packet repeaters. I've
built 2 19.2 repeaters, and am working on a 9600 Baud one now.

My World-Wide Web Page above has a reasonable set of resources for
digital networking, including HTML versions of some of my work, sample
configuration files for Linux AX.25, and some Linux software tools, as
well as the Ohio IP address coordination info.

I've just finished writing a book on TCP/IP that TAPR will publish
(hopefully) by the end of the year. It'll be called _Networking
Without Wires_ and is a completely rewritten, and greatly expanded,
version of the old _IntroNOS_ document I wrote several years ago. In
the meantime, I've made the old _IntroNOS_ available in HTML format on

my World-Wide Web Page above.

TAPR (Tucson Amateur Packet Radio) has formed a special interest group to discuss issues of regional packet networking (Net-SIG). As a result, the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related mailing lists. Its purpose is provide a medium for communications among those interested in packet radio networking, both dealing with technical issues and political/regulatory ones. We'll discuss things like how the potential 219MHz band will fit into the networking picture, how to link areas using different networking schemes, how to set network parameters, etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details about the Net-SIG (including upcoming conferences).

TAPR Vice President and Board Member

Joint ampr.org IP Coordinator for Ohio subnet (44.71.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP numbers in Ohio to:

ipaddr@febo.com

which is a mailing list read by a team of coordinators.

[_Editor's note:_ All ampr.org coordinators are listed in the document at:

American Radio Relay League | Justice is being allowed to do whatever
225 Main St. | I like. Injustice is whatever prevents
Newington, CT 06111 USA | my doing so. -- Samuel Johnson

American Radio Relay League (ARRL) Webmaster

The American Radio Relay League is pleased to announce the startup of ARRLWeb, your League's new HQ-based World-Wide Web site, at the URL

http://www.arrl.org/

ARRLWeb will serve as an essential Internet resource for active hams, carrying ARRL news, details on upcoming hamfests, conventions and Amateur Radio examinations, the ARRL Publications catalog, information of ARRL membership benefits and services, and more.

In inaugurating this new service, the League thanks Scott Ehrlich, WY1Z, and the other Boston Amateur Radio Club volunteers who've worked since December 1994 to keep ARRL up and coming on the Web via the ARRL home page they installed and maintained at oak.oakland.edu. Their volunteerism helped show us that upgrading our Internet connection to a level that allowed on-campus Web service would be essential to ARRL's mission of serving Amateur Radio.

Your comments, criticism and suggestions on how to make ARRLWeb bigger and better are _essential_ to its ongoing success, so please drop by and say hello!

I have been in ham radio for 15 years and played and worked on many modes and radios.

My home page above is a Link page I mostly use to find what I am looking for.

Devon Bowen KA2NRC

bowen@olsen.ch

Maintainer of the rec.radio.amateur.* Supplemental Archives available from:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/

[_Editor's Note_: Fixes have recently been made to the FTP software at this site so that the above URL will now work with most Web browsers.]

Maintainer of the Internet Ham Radio Callbook Server at:

telnet://callsign.cs.buffalo.edu:2000/

For further information about the Callbook Server, please consult the server's help facility, the rec.radio.amateur.misc FAQ, or additional server documentation at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/faq_callsign

Well, I've been talking about it for years. Those of you that have talked with me via E-mail know that. But this time I've actually started on my rewrite of the callsign server at Buffalo. And I've finally got a design that I'm happy with. The new searching capabilities are going to be *much* improved over the current system. I'll be getting rid of the bugs in the current telnet system and making it available to more people. Also coming is a WWW front-end for web surfers. Time to step into the 90s.

Part of the rewrite is an entire reorganization of the database look-up system. The old system was very specific to the FCC database

format because that's all that was available when it was written (yes, the server is very, very old). But now there are a number of databases floating around the net for different countries and I am rewriting the system to be more flexible and to accommodate a variety of formats and search types.

In doing so, I'll have the ability to add data for many more countries. That is, of course, if I have the data. In order to do this I need help. I need to get in touch with all people that have access to databases from countries other than the US. The more up-to-date these databases are, the better. If you have access to a database and would be willing to donate a copy to the callsign server for everyone to use, please contact me. A lot of people would genuinely appreciate it.

The callsign server has become remarkably popular on the net and this has happened because the community has contributed so much to it over the many years it's been running. I have heard stories of reunions with old classmates, stories of silent-keys that have been remembered, and stories from blind hams doing simple look-ups of other hams, all possible because of the server. Congratulations to the community for making this system so useful.

Work on this project has been delayed such that its completion time is somewhere in the indefinite future. In the meantime you can access the current server.

Please direct all other feedback, submissions and administrivia regarding these services to my E-mail address above.

I have been with Linux since it was first available. I have been a keen homebrewer for over 30 years, but I don't do much now due to lack of time. I have built lots of HF gear, including synthesized gear, and also a lot of test gear. I have also homebrewed magnetic loops, which is great fun. I have put together PC's and help other people with Linux issues. On packet, I run TCP/IP using LNET which is WAMPES-adapted for the UK by Darryl, G7LED.

During the school year, I am in Baltimore trying to set up a college
ARC at University of Maryland, Baltimore County. During the winter and
summer, I am in New Jersey. I am active in ARES/RACES/NTS and local
clubs in both areas, and would be glad to help other young people get
into the hobby of Amateur Radio, particularly in the interests of
Public Service and Disaster Management.

Rusty Carruth N7IKQ

Rusty Carruth aka N7IKQ aka rusty@indirect.com (NIC: RC541)
The Phoenix Linux User's group has formed! Details: me.
URL: http://www.inficad.com/~rustyc/
Join the Usenet Un-Net: 1700-1900Z Saturdays, 28.410 or 28.390 MHz

Other possible E-mail addresses:

rusty@descomp.com
rustyc@inficad.com

Tempe/Phoenix, AZ
USA

* Callsign Data
* Mobile/Portable/Field Day (FM, HT's, 10m SSB)

I'm willing to act as a reference for anyone wanting info on getting tapes (especially Callsign tapes) from the Department of Commerce National Technical Information Service (NTIS) or wanting other info on callsign-project related stuff.

One of these days I'll actually be around for the un-net! I promise, really!

My job is currently System Administrator for a large UNIX site so I know a little bit about day-to-day UNIX operations and UNIX installation :-) I also have much experience with constructing E-mail paths that will work rather than bounce.

I also have a fair amount of experience in hardware/software interfacing and machine control.

Team Leader, W5YI VEC

(Exams for Del Norte County every other month)

I've been a ham since 1933. I taught electronics, AC, DC, and radar principles/theory at the U.S. Army Signal Corps School at Fort Monmouth, NJ during World War II. I was chief engineer at KDB in Santa Barbara, CA from 1946 to 1951. I was engineer and technical director at NBC TV studios in Hollywood and Burbank from 1951 to 1982. I have one student now going for his General and prefer to teach the overall picture. I have done little or no benchwork on new equipment in the last 15 years. I'm still learning digital theory and techniques, but boards filled with chips do not evoke a sense of familiarity or recognition. I'm also still learning about the Internet.

GRAPES 56 kBaud Packet Radio Modems

I'm not an official representative of the Georgia Radio Amateur Packet Enthusiasts Society (GRAPES), but I am in contact with them, and have experience using their 56 kBaud radio modems. At the very least, I can forward requests I can't handle to the proper people.

The Proceedings of the 6th Computer Networking Conference has a paper by WA4DSY explaining the theory and practice of the 56 kBaud radio modem. (I think it's the 6th, I don't have my copy handy.)

GRAPES furnishes instructions for modifying a TNC2 to drive the modem, but there are better solutions. The Ottawa PI card and the Gracilis PacketTwin card are two good solutions. Of course they are PC bus cards. If you need standalone capability, the Kantronics Data Engine can handle it, as can the incredible Gracilis PacketTen. PacComm claims their new Sprint TNC can, too (PacComm now also manufactures the Gracilis cards under license and you can get them either from them or from Gracilis direct).

WA4DSY has interfaced raw telco codecs to the modems and done "digital voice" while mobile. It works quite well.

If you want information on the RF modem (full document sets are $20 US, creditable towards a later order) write to GRAPES at

GRAPES, Inc
P.O. Box 636
Griffin, GA 30224-0636
USA

GRAPES is a volunteer networking organization. There's no phone number, and turnaround on info requests may be slower than when dealing with commercial outfits. Please cut the volunteers a little slack.

Derrick C. Cole KC4WEJ

dcc@ssds.com

I'm a Network/Systems Analyst with a national systems integration firm. My professional fortes are UNIX-based system administration, sendmail, TCP/IP-based ethernet network engineering, network systems security (including firewalls), and programming (primarily Perl and C).

I've had notable success dealing with issues surrounding PC's, DOS, Windows and various applications/protocol stacks, including PC-NFS and LAN Workplace.

I'm still clueless in the electrical/circuit department.

PGH SATERN - Primary repeater system for Salvation Army

Maintainer of Link Communication List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/link.html

Only present users of Link Communication Products are welcome to join the list server. If you need information on Link Communications Products, contact them directly. Presently there are aprox 325 Members on the list server.

Maintainer of ACC List Server (Repeater Controllers):

http://www.engrng.pitt.edu/~rrc2/acc.html

The ACC list has approximately 300 members at this time. I am trying to restrict the list to only ACC users (control people) and owners. The list is also supported by the new owner of all the rights to ACC, Link Communications. I am also running the Link repeater controller list server. It has approximately 90 members at this time. The way to join the list server is to send me a short E-mail and tell me what equipment you are using. (Note: I have no ties to Link Communications or ACC. I started the Link list first and found how useful it is. I had a lot of requests to start the ACC list and did it.)

I've been an active Linux advocate since it first appeared on the
Internet. I was looking for an operating system that would better meet
the needs of my interest in Amateur Radio and provide me with an
environment in which I could actively experiment and develop. Linux
provides that and I've been promoting its use within Amateur Radio
ever since.

I'm an early contributing member of the Linux Documentation Project,
and you'll find the amassed works for it at:

http://sunsite.unc.edu/mdw/

ampr.org IP Coordinator for Sydney, Australia Metropolitan Area subnet
(44.136.xxx.xxx)

(I'm also the co-administrator of the Sydney (Australia) University of
Technology Internet/ampr.org gateway.)

I'm happy to assist with information relating to:

* Linux, especially when related to Amateur Radio.
* Amateur Radio Internet Gateways

I have a pretty broad "knowledge base" in all the areas indicated, but
if I can't help with something, I probably know someone who can.

Carl Estey WA0CQG

wa0cqg@tapr.org

North American Digital Systems Directory World-Wide Web Page:

(Sponsored by Tucson Amateur Packet Radio, TAPR)

http://www.tapr.org/directory/

The purpose of the Digital Systems Directory is not to manage,
coordinate, or regulate the usage of digital systems, but to provide
the most up to date and accurate listing of digital systems that can
be provided. Neither is it a formal organization, but a mechanism to
allow regional groups to provide and share information regarding
digital systems.

The Digital Systems Directory listing is intended for use by
individuals to further their enjoyment of the hobby and by
organizations to help plan and develop digital networks.

Please direct any submissions, feedback, or administrivia to my E-mail
address above.

I am a practicing electronics engineer (for over 35 years) with expertise in solving problems in the design of linear circuits, audio signal processors, low frequency (DC to 10 MHz), low noise, field effect devices, power supplies, batteries, and similar analog situations. I'd be glad to assist others in the solution of their electronic problems in these and tangential areas. I started in ham radio as a kid in the 50's, vacuum tubes, motor generators, and most everything related to WWII surplus equipment. Was a design engineer at Texas Instruments for several years in the heyday of discrete devices and linear integrated circuits, mostly for military and surveillance use. My present concentration is toward digital telephonic communications. Have now gotten pretty familiar with use of the Internet. I guess it goes without emphasis that my capability goes beyond the areas I listed as being most competent, but I could be a resource you may apply as you feel my experiences would be helpful.

ARRL Laboratory Engineer

* Radio Frequency Interference (RFI) matters
* RF Exposure Safety/Regulations
* Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111, USA. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the ARRL Info Server below.

If leakage from your local Cable TV operator is interfering with the Amateur Radio Service, it is in violation of the provisions of Part 76 of the FCC regulations.

I would first direct the problem toward the cable company system engineer or service manager. Chances are the "front-line" people who answer the phone don't know what you are talking about.

If this is not effective, contact me here at ARRL HQ. I can put you in contact with our liaison to the National Cable Telecasters Association. This liaison will help your cable operator understand their responsibilities.

For CATV interference problems in general, I recommend you obtain our Radio Frequency Interference Book. If you are a League Member, you can also get a copy of the ARRL Technical Information Service info package on CATVI -- "EMI/RFI - CATV" by sending a LARGE SASE with 3 stamps on it to the ARRL Technical Department Secretary, 225 Main St, Newington CT 06111, USA. This package is a reprint of an article I wrote for Communications Technology -- the Journal of the Society of Cable Television Engineers. We submitted it to "their" journal because we felt that it would carry more weight with the cable companies.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many EMI/RFI files are also available from the ARRL Info Server. See Mary Carcia's entry for more information.

ARRL Technical Information Service Coordinator (tis@arrl.org)

The ARRL Technical Information Service (TIS) is a valuable membership benefit that helps hams find answers to difficult technical questions.

The answer to a ham's most common technical questions can be found in one of the many books about Amateur Radio. Folks who call or write to ARRL TIS staff are often referred to one of these books or to a past magazine article.

However, most hams find that the fastest way to get the answer is to do their own research. Publication catalogs often talk about what kinds of information are available in different books. A few good books will answer the vast majority of questions as well as enhance a ham's knowledge and enjoyment of this fascinating hobby.

Magazines are also a superb technical reference. An annual index of articles appears in the December issue of QST and other magazines. These indexes will usually have an article or two (or six) about a particular topic. If an older QST or QEX article is not available locally, the ARRL Technical Department Secretary can provide a copy for a small fee. Back issues are also available from the QST Circulation Department.

The ARRL Technical Information Service is a valuable source of information and research for questions that cannot be answered by other means. ARRL TIS has information packages and bibliographies that are available on request to answer most technical questions.

For those who want to know if something has been previously published on a particular subject, TIS can also assist with research to locate this information. TIS also helps locate companies that sell hard to

find parts or supplies used in our hobby.

Many TIS files are also available via the ARRL Info Server. See Mary Carcia's entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web Home Page.

I am a Civil Engineer by training and a DX'er by choice. My Elmer taught me how to work pile-ups and how to build antennas, having put up 12 towers all over 100 feet. I know what it takes to get a tower up. I don't climb anymore, but have a lot of info. I like working on antennas and have several big Moseleys up in the air. It would be great to pass on what I have learned, as we are not all born knowing how to do everything, and the older I get, the smarter my father gets.

USA

* ARES/RACES/SKYWARN
* CW
* Field Day
* HF/Contesting/DX
* Novice/Tech Instruction
* RFI
* Seminars/Lectures
* Volunteer Examiner (WCARS VEC)

I've been licensed over 25 years. I was one of the first VE's
certified by WCARS VEC. I have served for several years as a
proofreader for the NCVEC Question Pool Committee. I work closely with
the WCARS Directors, and am an active VE with that organization

I have been involved with Emergency Communications and Traffic
handling from almost day one, having earned my first BPL at age 16 as
a novice. I have served as Assistant EC, County EC and currently serve
as District Emergency Coordinator for ARES/RACES and District Radio
Officer for Emergency Management Area F of North Carolina. I also
coordinate SKYWARN activities in our area.

I have served as Hamfest chairman, assistant chair, etc., as well as an officer of the local club, the Western Carolina Amateur Radio Society. I designed our homepage, am quartermaster of club equipment, and carry the keys to the club repeater. I frequently teach both theory and code for local Novice/Tech classes.

I have been Field Day Chairman for five years, serve on the RFI committee, hold WAS Awards both as a Novice CW operator and SSB Extra Class, a DXCC with 86 of them worked as a Novice. I am also the National Board Chairman of the Geratol Net, a WAS net which meets nightly from October thru April. I also am chairman of the local club's packet committee.

I "dabble" in helping newcomers make dipoles and other simple HF antennas and am frequently a new licensees first contact. (A debt I am repaying to my three trusty Elmers of so many years ago, two of whom are now silent keys)

I would be willing to help in these general areas on-line or close-by on the phone or in person. (I am a college professor by trade)

* Keeping it Simple (avoiding task overload)

I have agreed to provide a new home for the "Boat Anchor" mail list, with the blessings of Paul Prescott, N1AAC, who took over from Our Esteemed Founder Jim Lockwood, KM6NK. I have also agreed to take over the rec.radio.amateur.* Working Group mail list, formerly maintained by Ian Kluft, KO6YQ. In addition, a new mailing list devoted to homebrewing tube transmitters and receivers ("Glowbugs," a sort of intersection between Boatanchors and QRP) has been created.

The mailing list addresses are:

* boatanchors@theporch.com (*)
* glowbugs@theporch.com

Use these addresses for messages of general interest to the entire group. Please don't use them to subscribe, change address, etc.

(*) Effective 15 March 1996, the BoatAnchors list went to a subscription-only list, with $12 US per year as "dues" to support the list.

With monthly costs for Net access at $350 US/month and telephone line charges of $50 US plus, we are not getting rich. The fee was set after much consultation and wrangling, and was designed to cover the costs of running the list... and hopefully provide a surplus to upgrade the services we can provide, like better mail delivery, larger archives, etc.

The new automated list manager address is

listproc@theporch.com

Use this for subscribing, unsubscribing, getting archived info, getting the FAQ message, changing your address, etc.

To subscribe, send a message to this address with "subscribe boatanchors <your name>" or "subscribe rra-wg <your name>" Similarly, to unsubscribe, replace "subscribe" with "unsubscribe"

The new list owner address is

listown@jackatak.theporch.com

Use this address only when there is a problem which really truly can't be resolved otherwise.

I am 36 years old, have been a ham for 22 years, and currently hold an Extra class amateur license. I got my first ticket when I was 14 years old, thanks to my Elmer who is now a silent key.

I am an instructor for amateur radio classes, Novice through General, and teach CW at least once per year. I am also the VE team liaison for the TEARA VE team, and test monthly in Smithfield, NC.

I maintain a number of repeaters from 10 meters through 900 MHz including ATV. I build a lot, and enjoy restoration/construction of vacuum tube amateur gear.

I enjoy ragchewing and DXing, with about 75% of my operating time on HF spent on CW. I also enjoy weak signal and FM operation on 6, 2, 1.25m, 70cm, and 33cm. I am experimenting on 23cm and 10 GHz.

I maintain a number of sites, some of which are related to amateur radio. The URLs are:

Civil Air Patrol (CAP)

I was Communications Officer and former unit Landstation Bluebird 284,
1980-87. Statistically, Landstations are relatively rare. A land

station in CAP is an HF-capable station operating from both mobile and permanent locations as needed. As a land station, I checked into several regional nets for the Missouri Wing of the CAP. I am familiar with the CAP emergency protocol as well as MARS and ARRL. Also, I have extensive teaching experience for Novice to General levels and currently am a teacher.

* Packet and Digital Networking
* RACES
* Seminars/Lectures
* SKYWARN

I am an Advanced class operator, working on Extra. I work professionally as a manager of a computer services department in a large hospital system with more than 12 years experience in PC and Host Systems networking, I hold a degree in Electronics Engineering, as well as many hours in Computer Science Engineering. I operated a land-line BBS for 8 years, and now maintain a packet mail drop on 145.01 MHz. I maintain the TriCounty Amateur Radio Club (TCARC) of North Texas home page on the web:

http://www.why.net/home/kb5ylg/tcarc/index.html

and am the 1996 President of the TCARC. I am also the appointed Emergency Coordinator for the City of Azle for Tarrant County RACES.

I like to give talks to Amateur Radio Clubs, school groups, Scouts, and similar groups, mainly about Amateur Radio topics. Recent presentations I have done include Field Day preparation for clubs,

Computers and Ham Radio, Building Your First Dipole. I'm open to presenting other topics as well. I also help local amateurs to prepare their own presentations and talks.

I am a Baptist minister, and would be delighted to administer a Ham Radio theme wedding! <grin> I would also provide ministerial services for Ham related special events.

I will also provide free Novice/Tech licensing instruction for groups of 5 or more in the Tarrant/Parker/Wise County region of North Texas. Typically this involves about 18 hours of lecture, and some self study on the parts of the students. I'll do this free for nonprofit endeavors.

P.S. I monitor 146.98 Boyd repeater while commuting, and you might find me working HF CW just about any time.

Via TAPR's FTP site

The TAPR Software Library is now available via anonymous FTP. You can
access the library at:

ftp://ftp.tapr.org/tapr/

Log in as:

anonymous

with your E-mail address as password.

Via TAPR's Listserv (http://www.tapr.org/tapr/html/internet.html)

TAPR maintains several SIGs in various interest areas. To get the
latest list of SIG groups, send an E-mail message to:

listserv@tapr.org

with the subject line:

Request

and one or more of the following in the body of the message:

list

for list of mail groups on TAPR.ORG

information listname

(where listname is the name of the mail group)

to request the information on any mail group

subscribe list your_first_name your_last_name

(where list is the name of the mail list you want to join and
your_first_name and your_last_name are your first and last names,
respectively)

to subscribe

Some of the current SIGs include:

NETSIG Regional Networking SIG
BBSSIG BBS SIG
HFSIG SIG on HF Digital Topics
DSP-93 SIG for those that are building TAPR AMSAT DSP-93 kits
APRSSIG SIG on APRS
TAPR-TNC SIG on TNC Issues
DSP SIG on general DSP topics
MIC-E SIG on supporting the TAPR APRS MicEncoder kit

TAPR-BB Announcement channel for TAPR bulletins and information

General Information about TAPR:

* Ever heard of a TNC?
* Interested in general packet radio information?
* Interested in Spread Spectrum Communications?
* Interested in high-speed packet operations?
* Interested in other types of digital communications?
* Interested in experimenting or building kits?
* Interested in keeping up-to-date on national digital and packet
issues?

Then you might be interested in TAPR!

Goals:

* Support Research and Development efforts in the area of amateur
digital communications
* Disseminate information on packet and digital communications
* Provide affordable and useful kits for experimenters and hobbyists
* Pursue and help advance the amateur art of communications through
publications, meetings, and standards

History:

If you have used a packet radio TNC, then you are already a part of TAPR history.

The TNC (Terminal Node Controller) project was the first big project that TAPR tackled and completed. Now TAPR covers a wide range of interests including: APRS, Spread Spectrum, networking, Timing, DSP, HF, and much more.

TAPR was founded in 1982 as a national organization with interests in the areas of packet and digital communications. Today, TAPR continues as a membership supported non-profit amateur educational research and development organization. TAPR currently has more than 2500 members, worldwide. TAPR continues to develop kits for the amateur community and is working actively on publications and communications standards.

Membership:

Membership in TAPR includes a subscription to the quarterly published Packet Status Register newsletter. PSR has been published since 1982 and is recognized as an authoritative source for up-to-date user and technical information on packet radio. Much of the material in PSR is timeless. Back issues may be obtained from the TAPR office. Membership in TAPR is $20 US for one year in USA, Canada, and Mexico. Outside North America is $25 US.

Join the amateur digital-revolution -- Join TAPR!

Phil Karn KA9Q

karn@unix.ka9q.ampr.org

http://people.qualcomm.com/karn/

High-Performance Software Modem Project

Recently I've been working on a prototype SQPSK (staggered quadrature phase shift keyed) modem for the amateur satellite channel. This modem is implemented totally in software running on a PC with an ordinary (non-DSP) Soundblaster card. It runs at 1200 bps and fits into a SSB transceiver bandwidth.

I've made good progress and have put some info up on my web page about it, including an audio file to show what it sounds like in noise when the signal is still copyable, available from:

http://people.qualcomm.com/karn/ham.html

Watch that page for an announcement of when I actually release the code, which I plan to integrate into KA9Q NOS.

Spread Spectrum

I've been trying to answer the question of consequences of promoting relatively wide-band digital modes on band occupancy and throughput (i.e., What gets optimized? Are there tradeoffs in quality vs. quantity?) in the context of the spread spectrum rules debate, but I think it needs to be a much wider discussion. See my reply comments to the FCC on this issue:

http://people.qualcomm.com/karn/papers/index.html

(See also Steve Bible for more information on Spread Spectrum)

[_Editor's Note:_ I'm honored by the presence of many advanced-level Elmers in this directory, including Jeffrey Angus, Gary Coffman, and now Phil Karn. Phil has graciously agreed to appear in this directory for the purpose of elmering and technical exchange for the advanced topics listed above. As with all of my Elmers, please respect their time by only seeking assistance from them for the topics under which they are listed. There are many Elmers willing to answer more beginning-level packet radio questions, including basic questions about IBM PC hardware, TCP/IP and NOS. Consult the "IBM PERSONAL COMPUTER (PC) AND CLONES" and "PACKET AND DIGITAL NETWORKING" categories in the Subject Quick-Search Index for a complete list.]

Co-Moderator, LARC Public E-mail Reflector:

larc@seta.fi

If you're not already on LARC's E-mail reflector, you're welcome to subscribe, even if you're not a member of LARC. All you ever wanted to know about our E-mail reflector, including instructions on how to subscribe and unsubscribe can be had by sending an E-mail to:

majordomo@seta.fi

with the following line appearing by itself in the body (not the Subject) of the message:

info larc@seta.fi

The Lambda Amateur Radio Club (LARC), is an international club for gay, lesbian, bisexual and transgendered radio, electronics, and computer enthusiasts (and their friends). Membership is open to all who are supportive of sexual minorities.

Members receive our newsletter, the _Lambda Net News_ each month, learn about our public service activities, keep track of our weekly activities such as Internet Relay Chat (IRC), and follow the planning and may even participate in our fourth LARC-sponsored DXpedition-Caribbean vacation in 1998.

If you'd like to make many new friends, consider joining our club! We'll be happy to mail you an application right away. Just send an E-mail request for an application to:

larc@net-quest.com

OSCAR (Orbiting Satellites Carrying Amateur Radio)

I have been an active satellite operator on both high-orbiting (elliptical and low orbiting satellites (LEO) since 1990. I hold satellite DXCC #85 and I currently have 210 countries confirmed on satellite. I enjoy both CW and SSB and DXing. I am a member of AMSAT.

LARC has sponsored three DXpeditions to the Caribbean focusing on satellite operating.

Author of the QRZ! Ham Radio CDROM

I am interested in receiving amateur-radio-related public-domain and/or shareware programs, data bfiles, frequency lists, etc., that would make a useful edition to the QRZ! CDROM. Can help arrange volume discounts for clubs and groups, and will donate copies of QRZ! to qualifying non-profit organizations. Send E-mail or call +1 (602) 483-2036.

We now have the QRZ! FTP archive and QRZ! WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

* ftp://ftp.qrz.com/
* http://www.qrz.com/ (WWW interface to the FTP archive as well as a Callsign database server)

Authors of ham radio shareware programs, data files, mods, etc., are invited to contribute their materials to the QRZ! anonymous FTP server above.

I would also like to thank those who have volunteered in helping port the QRZ! source code to a wide variety of platforms. In the next edition, we'll have support for DOS, Windows, OS/2, Windows NT, Sun, NeXT, SGI, Linux, AIX, and HP/UX executables, directly on the disk.

Notably not mentioned is Macintosh, which so far has been a bit troublesome to put together. If anyone who can program in 'C' on a Macintosh would care to volunteer, please let me know. Although there is an experimental Mac interface at this time, I'd like to make it an officially-supported platform.

The QRZ! Callsign/E-mail Registry now contains over 4100 callsign-to-E-mail-address listings and is growing daily.

We have a WWW page where you can input your E-mail address directly into the QRZ! Callsign Database, where it will be published on both CDROM and on the Internet. When you use this page, your E-mail address

is made instantly available to the online database.

Everyone is encouraged to check in and add their E-mail address to the server. There are no charges or listing fees, and it's free to all radio amateurs. The procedure takes only a second, and you are only asked to supply your callsign and E-mail address.

Register your E-mail address today!

We're pleased to announce that the online FCC database at qrz.com is now updated nightly from the FCC with fresh information.

According to FCC rules, if you've just passed your first test, you can begin operating as soon as your callsign shows up in the online database.

Please pass on any ideas, suggestions, comments, etc., to my E-mail address above.

I have a page of Macintosh Shareware I have written:

http://www.best.com/~jluszcz/software.html

One of the programs I have written allows you to connect the Radio Shack Digital Multimeter with PC Interface to your Macintosh Computer. It is Apple Scriptable. The Radio Shack multi meter has a serial port (RS-232).

It is called MacMultiMeter

The W5YI Group, Inc.
P.O. Box 565101
Dallas, Texas 75356
USA
Tel. +1 (817) 461-6443

This firm consists of two separate divisions:

EDUCATION DIVISION:

Develops and distributes amateur radio self-training materials, including the Gordon West/WB6NOA line of audio, video, computer software and printed study materials. Credit card orders and information from (toll free): +1 800 669-W5YI (9594). All materials are guaranteed current and shipped within 24 hours with 2-day priority delivery. They offer a special discount for instructors conducting training classes.

W5YI Amateur Radio written license exam and Morse Code training products are also available from every Radio Shack nationwide. Color photographs of the major training products are available at their Express Order or Radio Shack Unlimited desk.

THE W5YI-VEC:

Coordinates the activities of more than one thousand volunteer examining teams world-wide. The locations of test sites near you can

be determined by calling +1 (817) 461-4663 anytime, including evenings and weekends. Any General, Advanced or Extra Class amateur may form their own VE team by calling +1 (817) 860-3800 during normal business hours.

All examination results are electronically filed with the FCC. Amateur radio licenses and call signs are normally issued within 48 hours of VEC receipt of the examination paperwork. New amateurs may determine their call signs by calling the FCC's toll free consumer assistance line: +1 (800) 322-1117.

emcom4hosp@aol.com

Hospital Disaster Support Communications System (HDSCS) Coordinator

HDSCS World-Wide Web Page:

http://members.aol.com/emcom4hosp/

For over 15 years, the 90-plus members of the ARES/RACES-affiliated
Hospital Disaster Support Communications System (HDSCS) of Orange
County, California have served over 35 hospitals in nearly 50
emergency situations. At the new HDSCS site on the Web, you can find
out how volunteer Amateur Radio operators can be an important backup
communications resource for hospitals, if the hams are well organized
and trained.

There you will find:

* How HDSCS organizes to support hospitals
* What "dedicated communicators" are and why they are important
* Frequently-Asked Questions about hams helping hospitals
* The surprising answer to "How often do hospitals need hams,
anyway?"
* Response from hospitals served by HDSCS
* Info given to new HDSCS members
* Recruiting hams for hospital communications
* And lots more...

Joe Moell K0OV

homingin@aol.com

Homing In Column World-Wide Web Page:

http://members.aol.com/homingin/

(Homing In is a column in 73 Magazine featuring information about radio direction finding, hidden transmitter hunting, and jammer tracking.)

This site features:

* Southern California T-hunting, what equipment the winners use
* International-style foxhunts have come to California
* Complete design fixes for the Dick Smith doppler set
* Updates to the Moell/Curlee book (TRANSMITTER HUNTING---Radio Direction Finding Simplified), including board/kit/parts sources and building tips
* Frequently-Asked Questions (FAQ) and answers from the Homing In mailbox
* Index and subject list of all Homing In columns in 73 Magazine through September 1996 (over 90 articles)
* And lots more...

The Homing In site is written and maintained by Joe Moell K0OV. It is not affiliated with 73 Magazine, Wayne Green Enterprises, or any other commercial entity.

* Volunteer Examiner (ARRL VEC)

I have scratch-built all my antennas for all bands, written antenna programs, and experimented with many types of antennas over the past 38 years. I have been a ARRL VE for 5 years now, as well as team leader. I started in computers by building the Altair in about 1968, later switched to Radio Shack. In 1982, I started assembling Clones, and still do to this day (for a living). I have written code in Basic, Quick Basic and C.

I have built power supplies, both low-voltage-high-amperage and hi-voltage-low-amperage. I have wound my own transformers, one of which still runs my VHF station after 20 years of use.

It is very hard to pin-point what one knows, as we are constantly learning. Also, we must remember the old adage, "USE IT OR LOSE IT."

* Packet and Digital Networking

I am an NTS operator running an unattended digital (Winlink, latest version) digital system. I operate a hub station for Eastern Canada Digital operations, including AMTOR, PACTOR, and CLOVER.

Lyndon Nerenberg VE7TCP, VE6BBM

lyndon@ve7tcp.ampr.org

I'm heavily involved in Internet Protocol (IP) networking over packet, as well as system administration of UNIX and UNIX-like operating systems (with an emphasis on networking, E-mail, etc.). My current concentration is on writing UNIX based tools (e.g. software for logging, antenna design, propagation analysis) that can be shared throughout the ham community.

I also maintain the ve7tcp.ampr.org server. This system hosts a variety of ham-radio related mailing lists as well as a comprehensive World-Wide Web site and FTP archive, and was one of the first Internet servers dedicated to ham radio. The system is also a hub site for the ampr.* newsgroups.

Information on the mailing lists offered can be had by sending an E-mail message to:

listserv@ve7tcp.ampr.org

containing (only) the word:

INFO

in the message body. The WWW server is located at the URL:

http://ve7tcp.ampr.org/

and the FTP server resides at:

ftp://ve7tcp.ampr.org/

Direct login access to the system is available to anyone holding a currently valid amateur radio license. The server provides a number of useful tools for the radio amateur, including satellite tracking software, CAD design software, SPICE, and other tools not generally available to people running on Microsoft Windows or Apple based PC's. (It runs 4.4BSD UNIX.) To obtain a login on the server, send a photocopy of your current amateur license, along with a SAE and IRC to:

Lyndon Nerenberg
1804 Juniper Street
Prince George, British Columbia
Canada V2L 1N7

Your login and password information will be mailed to the address
listed on your license.

Maintainer of the Internet DX Mailing List

To subscribe, send an E-mail request to:

dx-REQUEST@ve7tcp.ampr.org

with the following line in the message body:

subscribe dx

Dakota County, Nebraska ARES Emergency Coordinator (EC)

ARRL Official Bulletin Station (OBS)

I have been involved in Packet since 1984. I currently run a Packet BBS with the F6FBB software, as well as a number of Packet Nodes using TheNet Software. I have coordinated the Volunteer Exam Session in this area for a number of years. I operate 2 meters and HF, both CW and SSB. DX'ing and Contesting are some of my activities, along with collecting prefixes.

I have had NWS spotter training and am part of organizing the spotter network in the Siouxland area. AS the EC of Dakota county, I work with

the Woodbury County, Iowa EC in the spotter effort.

During my business activity as a Systems Engineer with IBM, I have developed some expertise in PC's and have worked with the DOS, Windows and Windows 95 Operating Systems along with many Ham-related applications.

I have organized a number of Ham events such as Packet Symposiums and am the current Chairman of a Regional Ham Radio Convention.

Dayton, Ohio E-mail Elmers

Sponsored by the Miami Valley (Ohio) FM Association (MVFMA):

http://www.febo.com/

The Dayton E-mail Elmers service allows new or prospective hams in Dayton and Southwestern Ohio, or even experienced amateurs who are venturing into a new aspect of the hobby, to send an E-mail request for assistance. Volunteer on-line Elmers then can provide a response in the "Elmer" tradition of mentoring new or less-experienced hams.

Today, many hams prepare for their license exams through classroom programs, and the individual Elmer's touch isn't as common as it once was. The E-mail Elmer service is an attempt to restore this long tradition. The MVFMA hopes that the initial E-mail exchange will be the start of an ongoing Elmer relationship in the best tradition of Amateur Radio."

Hams may use the E-mail Elmer service simply by sending an E-mail message to:

elmer@febo.com

and posing the ham radio question they'd like to have answered. Users will get a machine-generated confirmation, and within a few days, they will get a response from one or more of the volunteer Elmers.

For more information, or to volunteer as an E-mail Elmer, contact me at my phone number or E-mail address above.

Keith Petersen W8SDZ

w8sdz@simtel.net

General Manager of Simtel(TM) Software Repository:

http://www.simtel.net/simtel.net/
ftp://ftp.simtel.net/pub/simtelnet/

(Formerly wsmr-simtel20.army.mil)

(simtel.net is a service mark of Walnut Creek CDROM)

Announcements regarding uploads to Simtel of amateur-radio-related software are cross-posted to:

news:rec.radio.info

[_Editor's Note:_ This outstanding archive collection, which incorporates much amateur-radio-related software, is listed here for completeness. However, as Keith gets about 200 E-mail messages a day,

he strongly encourages self-sufficiency in the use of the archive. The above URL's contain several documents regarding how to download files from and upload files to this archive. There are also many other Elmers willing to answer beginning-level questions regarding accessing files via FTP and WWW. Consult the "INTERNET SERVICES" category in the Subject Quick-Search Index for a complete list.]

I have considerable experience in computers, some in packet, with an informal training in electronics. My background includes electronic surveillance countermeasures such as looking for interesting signals or wire connections with spectrum analyzers/receivers and TDR's, etc.

I'm not very active in operating, but have had a fair amount of experience when young.

I would prefer dealing with people in my local area, since many well-informed experts are available via the Internet.

* SAREX

Educational Advisor to the American Radio Relay League

I specialize in developing growth in volunteer organizations and have published and made public presentations on this subject.

I have written and published training/educational curriculums for Novice, and Tech Plus amateur radio licenses. Of interest is the fact that amateurs licensed through my courses are very likely to upgrade as evidenced by the high number of hams in the Lawton, Oklahoma area that hold Extra Class licenses.

I organized and conducted a SAREX in southwest Oklahoma that involved over 3,000 students in 21 schools in seven cities of southwest Oklahoma. The SAREX consisted of an essay contest with the winners being able to ask questions of the astronauts while they orbited the earth. The live SAREX was broadcasts over the Lawton, Oklahoma Public School systems cable television to the public in southwest Oklahoma.

More recently I have been involved in securing building permits in Florida to put up amateur radio towers in this highly restrictive State.

http://www.xs4all.nl/~pdr123/pdr-home.htm

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

* Modulation types - FSK, PSK, MSK
* Error control - various types of ARQ and FEC systems
* RF - Antennas, HF propagation
* Networking - TCP/IP over HF
* Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over
the years. I always enjoy discussing and researching a communications
problem so if you don't see it listed above drop me a line anyway,
especially if you happen to be in Europe.

I am the Assistant Principal at Estill County High School in Irvine, KY and have been in the education business for the past 23 years. I enjoy helping people earn their ham radio license privileges. I have a test team with the WCARS group and have been testing for a good number of years. We have tested over 300 hams during the last three years.

I also have been in the repeater business since 1973 (146.820) and have held a ham license longer that any other resident of Estill County Kentucky. I am the fourth ham to be licensed in our community, the other three have either become Silent Keys or moved from our county. I am very proud to have held a ticket for almost thirty years. I hope through my experience with the local emergency team, I can also provide advice on EMS. I founded the local Rescue Squad in 1978 and am still President of the corporation. I was also the local DES Coordinator from 1977-1993.

Chuck Rippel WA4HHG

crippel@exis.net

Secretary, Collins Collectors Association

The Collins Collectors Association would like to invite those of you who have an interest in Collins Radio to subscribe to the now fully automated Collins Reflector. This service is sponsored by the CCA and is provided at no charge to Collins enthusiasts.

There is an FAQ which will hopefully be sent to each new subscriber when they "sign on." If you would like one and don't get it, drop me an E-mail at my address above.

There may be a few initial bumps and glitches at first but we hope those of you who choose to participate will enjoy it.

As of 1/6/97, the Collins Reflector will be fully automated and I will discontinue forwarding the mail manually as in the past.

The new automated list processor will be a real upgrade. It will enable you to get the material in nearly real time and does not require me to forward each message manually. You will get the material much quicker than before. The Collins Listserver behaves much like the Boatanchors list. Simply, you subscribe to the list, send it messages which it then "reflects" back out to all those who subscribe. This is done once every ten minutes.

You must resubscribe to the new listserver in order to continue to participate. The automated list server follows the same guidelines contained in the CCA FAQ. Please continue to follow those guidelines for posting and contributing.

Here is how to subscribe:

Send an E-mail message to:

listserv@listserv.tempe.gov

Leave the Subject header of the message blank and in the body, simply type:

subscribe collins

The listprocessor will output an E-mail message back to you with easy to follow instructions asking for your confirmation. At that time, you will be asked to send a second E-mail message to the listserver. Follow those instructions exactly and send the second, confirmation, message to the listserver.

If all is successful, you will be signed up to the list and a complete set of instructions will be sent back to you in the form of an E-mail by the automated list server.

Finally, a very big thanks to Dave Kelly, AI7R and the City of Tempe, AZ who have graciously provided and set up the server. Dave and the Collins Collectors Association sponsor the Collins Reflector as a no charge benefit for Collins afficionados everywhere. Enjoy!

I have been a ham since 15. I have been an Extra class operator since age 17, and a VE since age 18. [_Editor's note:_Possibly the youngest Contact VE ever.]

I am an avid HF QRP (low power) and mobile operator. I have spent literally hundreds of hours installing my mobile station (IC-706 and Screwdriver antenna, plus more grounding straps than I can remember) in my 1995 Neon.

Most of the time I operate QRP CW mobile.

Why? It challenges my operating skills as much as possible, plus QRP is safer (RF-wise) than is 100 or 1500 watts. With the effects of RF exposure still unknown, I don't feel like exposing myself to high-power RF fields any more than necessary, and if 3 watts will do the job, so be it, I'll emit it.

In addition, people are generally amazed when you mention that not only are you running just 3 measly watts output power, and on top of that you're doing it from your car as it's zipping down the Interstate at 65 mph. They just can't believe it's possible that less power than a nightlight is bouncing off the ionosphere and ground three times, and is still able to be detected 10,000 miles away.

I'm here to tell them it is.

I enjoy building kits, and consider myself to be a good builder.

I am a fair contest operator, and enjoy 35 WPM CW ragchews as well as hunting for DX.

I am active with both the Laurel (Maryland) and University of Maryland Amateur Radio Clubs, and operate with both during public service events. I have been the chief HF operator at University of Maryland HF-related events (Field Day and Sweepstakes) for the past three years.

As a Volunteer Examiner, I have conducted roughly 150 test sessions, testing at minimum a thousand applicants.

I have recently given Novice/Technician license instruction, as well as taught a 5 WPM code class. I have been told that I have a knack for describing complex subjects in ways that make them far easier for laypeople to understand.

* Volunteer Examiner (ARRL and W5YI VEC)

My favorite aspect of amateur radio is contesting. It drives my station improvements and operating proficiency. I have played around with antennas and made various station modifications to improve my contact efficiency. Along the way I have solved some RFI problems, built many of my station accessories, installed and built some HF antennas, put up a small (40') tower, etc.

I volunteer as a RACES operator in no particular capacity. I help with a few VE test sessions a year mostly representing the ARRL VEC with the Burlington ARC team.

I work as a SRAM design/product engineer at IBM Microelectronics in Essex Junction, Vermont. I have been interested in electronics and computers since a young age, but only got my amateur radio license in 1993 as a Technician at the age of 31. I got to know the code and upgraded to Extra in February of 1994.

Amateur Television Quarterly (ATVQ) Magazine

The magazine's E-mail address and mine are the same: ATVQ. There is also a ham radio section for "manufacturers and dealers" on America On-Line in which we list Amateur Television Quarterly, as expert and manufacturer. That is where most of the Frequently-Asked Questions (FAQ's) come from.

Most FAQ's are answered in one of two books we published. ATV Secrets for Aspiring ATV'ers is a non technical book, and Volume II is a 300-page technical manual with theory and projects for all equipment necessary to operate an ATV station. Prices in US funds are $9.95 and $24.95 plus postage ($3.10). Most of your inquires can be answered by either of these two books.

I am also compiling a set of W6ORG Notes, a regular column in ATVQ, which answers many of the technical FAQ's on various equipment and operations. This will be available for $9.95 also.

I can Elmer on most subjects, but not spread spectrum or packet.

I have nearly 30 years experience in electronic/computer service work. I enjoy designing, building, and operating vacuum tube and solid state equipment. I restore, test, repair, and operate antique radio equipment. The maximum power I use for daily operations is always below 100w, and most of the time, I operate at QRP (5w) or less! (More with less.) I have a real enthusiasm for building just about anything from nothing, as part of the homebrew aspect of the hobby. When not working DX, enjoying a good contest, or have a great time on Field Day, I watch over my 6m repeater, or work VHF packet. I am glad to be of help to those in need! I fully support the Elmer program as a means to bring new people into Amateur Radio. I teach Novice and Tech classes for aspiring Amateurs. I am also a merit badge instructor for the scouting program, and the advisor for the Bloomsburg University Amateur Radio Club.

I can help people with HF stuff, cheap antennas, and am willing to help troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service
their own equipment. I would like to see a turn-around here...

Recently I undertook some academic research into packet radio using KA9Q's Multiple-Access/Collision Avoidance (MACA) link-layer protocol. I attempted a literature survey as well as some software simulations of the protocol (with varying degrees of success). I would welcome any opportunities to improve on my work, find out about any actual MACA implementations, share information, and build on my bibliography (available on request). More information about MACA may be obtained from:

http://www.novia.net/~pschleck/wireless.html

My vocation and avocation both deal with Radio Frequency transmission and propagation. I have spent considerable time working with RF safety issues as they pertain to broadcast radio, television, and now amateur stations.

Presently I serve as Region 3 Administrative Assistant for Air Force MARS.

Additionally, I serve as Activities Director and Chairman of the Field Day Committee for the Viking Amateur Radio Society (VARS).

Courage Center
HANDI-HAM System
3915 Golden Valley Rd.
Golden Valley, MN 55422
USA

Manager, Courage HANDI-HAM System

I have information pertaining to Amateur Radio and physical
disabilities or sensory impairments, such as blindness.

Visit us on the World-Wide Web:

http://www.mtn.org/handiham/

HELP WANTED: READERS NEEDED BY HANDI-HAMS

The Courage HANDI-HAM Center needs volunteer readers to record ham
radio books and publications on audio tape. Volunteer readers provide
a valuable service to persons with severe physical disabilities and

sensory impairments who cannot use regular printed books.

Volunteers should hold an Amateur Radio license and be familiar with hobby terms and expressions. A clear speaking voice and the ability to read the written text of Amateur Radio books and describe the diagrams and pictures are essential.

HANDI-HAMS will provide a tech sheet and a sample tape to new volunteers, as well as a copy of the book to be read and cassette master tapes. Readers will need a good-quality cassette tape recorder and a quiet place to record. Some of the books we would ask readers to tape would be ARRL license manuals, special interest Amateur Radio books, and instruction manuals for radios.

This volunteer work can be done in one's own home, at one's own pace, as long as there is a quiet place to read. It is a wonderful way to share Amateur Radio with others!

ARRL Test Engineer

My responsibilities include both QST Product Review and Advertising Acceptance testing. I also assist with the ARRL's Technical Information Service (TIS) and am very knowledgeable about research of past QST articles.

The ARRL TIS Coordinator is now Ed Hare. See his entry for more information.

The ARRL Info Server Sysop is now Mary Carcia. See her entry for more information.

See Jon Bloom's entry for information about the ARRL World-Wide Web
Home Page.

ARRL Volunteer Counsel

I am happy to help out with troubleshooting the Kenwood TS 520,
T-599/R-599 twins, and the TS 440S. I also have expertise with the Ten
Tec Argonauts, the OMNI-D, the Corsair I and II, and the OMNI VI. I am
happy to meet those interested in learning or improving their CW on
the air.

AA9PW Amateur Radio Exam Practice World-Wide Web Page:

http://www.biochem.mcw.edu/Postdocs/Simon/radio/exam.html

This WWW site allows users to practice for the US Amateur Radio examinations on-line. The written examinations for all five classes, novice through extra, can be generated complete with figures, filled in on-line, and then graded. The results are presented question-by-question, and also graphically by subelement, so that users can identify areas which require further study.

More advanced options include saving the results of each examination a user takes on-line. These results can be used to monitor progress and also as a basis for generating exams tailored to a user's needs, ensuring that all questions are practiced.

Exams can also be generated and E-mailed to users without WWW access:

Send E-mail to exams@eeyore.biochem.mcw.edu with a line in the body of the message like:

generate novice

This will result in a novice exam being generated and E-mailed back to you with the answers included at the end of the E-mail. These exams lack the figures, so reference to a printed copy is advised! Simply replace "novice" with any of the other exam names (technician, general, advanced or extra) to get the other exams. To request multiple exams in one E-mail, write multiple "generate" lines.

Other exam resources such as the question pools, copies of the exam figures, and FCC Part 97 are also available. A comprehensive help page exists to guide users through the facilities of the site. All questions and queries are welcome!

==========
This message does not constitute any official or unofficial statement or
policy of American Turnkey or any other organization, corporation or
institution.

I just upgraded to Advanced, and am now working on Extra. Was first
licensed about ten months ago.

What I've learned:

1. How to operate HF from your apartment without being evicted
2. How to pass tests, both written and code
3. How to make a virtue out of the necessity of your limited
equipment, and enjoy the process while doing it

I operate CW HF exclusively. The only time I get to operate is when
the baby is asleep, so the XYL demands silent running. Besides, with
my wimpy wire, there is little point in trying to run voice.

ARRL Official Emergency Station (OES) and Local Government Liaison

I have experience with antennas (calculations, construction, and
repair), all HF digital modes (including HF FAX), wiring of TNC's to
radios, custom switchboxes for TNC's, radio modifications, math
calculations, personal computers (DOS, Windows, Networking, and HTML),
and of course, on-the-air operation and CW. I would love to work with
young students wanting to become hams. I hope I can help.

* Packet and Digital Networking
* UNIX

I am currently a mature student at King's College, University of
Aberdeen, studying for the B.Sc. (Hons.) Computing Science. I enter
the third year of this course on 25th September 1997.

I run a telephone BBS in the Fidonet network. This is currently offline due to problems with the telephone line, but is expected to be back up in late September of 1997.

I also have my own IBM compatible computer, which has a P166 processor, 32M of RAM and a total of 4.6G of hard drive space, spread between three EIDE hard drives. This computer normally runs under the Linux operating system, and I am gradually moving the above Fidonet BBS system across from MSDOS to Linux. Because of the lack of suitable software under Linux, I am writing one myself, having had 15 years experience as a professional programmer.

I am a regular participant in AuroraMUSH, a MultiUser system, and have authored several patches to the suftware controlling it. It may be visited at:

telnet://amush.ml.org:4190/

I have been involved with Packet radio for over a decade now. Indeed, it was packet radio that got me interested in Amateur Radio in the first place.

I started up a mailing list connected with the Amateur Satellite world, currently using manual subscriptions. The list is:

Space.Repeater@cus.umist.ac.uk

and is for the discussion of the possibility of placing an amateur band repeater or transponder in orbit around a planet other than Earth, or on the surface of one of the other planets.

I will add that, although I can claim to be something of an expert on both Linux and Packet Radio, I am definitely NOT an expert on the two together.

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxiliary programs.

AMSAT-NA (The Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In addition, the AMSAT World-Wide Web home page provides interactive access to a variety of information related to the amateur radio satellite program. Use your Web browser program (e.g., Mosaic) to access the URL:

http://www.amsat.org/

Anonymous FTP is available from:

ftp://ftp.amsat.org/amsat/

This archive contains much of the same information as the WWW server. In addition, various files and programs are available for anonymous FTP. This is a relatively new archive, so the older FTP site:

ftp://ftp.ucsd.edu/hamradio/

still has lots of files not available there.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes. The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS - AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB - AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically

forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the sender before publishing anything seen in AMSAT-BB elsewhere, unless the posting was obviously a public press release. However, posters should realize that anything posted to AMSAT-BB is essentially public.

KEPS - Keplerian Elements mailing list

This mailing list carries official postings of Keplerian element sets for satellites of interest to radio amateurs. Like the ANS bulletins, these messages are posted in a form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should send messages to the KEPS mailing list.

NASAINFO - NASA related information mailing list

This mailing list contains information about current and planned NASA space missions. Be forewarned: at times this mailing list delivers many large messages.

SAREX - Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and remailing aliases is done manually. Later, this service will probably be automated and you will have to follow a strict message format. For now, you may send requests in free format. They will usually be processed within a few days. In general, you will not receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive
2. Your callsign, if any
3. The Internet address to be used, if different from the one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that

the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Please note that the AMSAT business office is separate from mailing list maintenance. You may address membership requests to martha@amsat.org, or send them by mail, phone, or fax to AMSAT headquarters:

I used to run my own bulletin board system before the Internet came
along. I also do my own monthly newsletter called the _Hamband DX'er_
for many years. It is still going. I take care of the ARRL SWL Bureau.
My name is listed in any callbook under the various QSL bureaus. I am
an avid DX'er of the ham bands with over three hundred countries
confirmed. Presently I run my own WWW Page to help others with QSL
info requests.

DX QSL Info World-Wide Web Page:

http://www.coredcs.com/~mtw/

The DX QSL Info File is updated monthly. It is in Xbase format and
runs under a variety of software, including:

* Dbase
* Vplus
* Totalham

Expertise:

Technical: Elbugs (incl. features like dot/dash memories, squeezing, touch sensors, auto spacing) Antennas used: Windom, Delta Loop, Trap Dipole, Marconi wire.

Operational: CW Operator since 1981, QRP Operation, Traffic handling nets (NTS, Swedish QTC nets) CW operating in several West European languages (Ham radio shorts, use of foreign CW characters in Italian, German, French, Spanish, and Swedish). QSLing (How to design a QSL that satisfies award hunters and operators of the QSL buro)

Club life: Mbr of AGCW, UFT, GQRP, HSC, VHSC, SMHSC, SCAG,...

Admin: License Regulations in Italy and Germany

Mathematics: Spherical Trigonometry, beam headings, calculation of sunset/sunrise times, etc.

+ Dayton, Ohio E-mail Elmers
+
+ Sponsored by the Miami Valley (Ohio) FM Association (MVFMA):
+
+ http://www.febo.com/
+
+ The Dayton E-mail Elmers service allows new or prospective hams in
+ Dayton and Southwestern Ohio, or even experienced amateurs who are
+ venturing into a new aspect of the hobby, to send an E-mail request
+ for assistance. Volunteer on-line Elmers then can provide a response
+ in the "Elmer" tradition of mentoring new or less-experienced hams.
+
+ Today, many hams prepare for their license exams through classroom
+ programs, and the individual Elmer's touch isn't as common as it once
+ was. The E-mail Elmer service is an attempt to restore this long
+ tradition. The MVFMA hopes that the initial E-mail exchange will be
+ the start of an ongoing Elmer relationship in the best tradition of
+ Amateur Radio."
+
+ Hams may use the E-mail Elmer service simply by sending an E-mail
+ message to:
+
+ elmer@febo.com
+
+ and posing the ham radio question they'd like to have answered. Users
+ will get a machine-generated confirmation, and within a few days, they
```

```
+ will get a response from one or more of the volunteer Elmers.
+
+ For more information, or to volunteer as an E-mail Elmer, contact me
+ at my phone number or E-mail address above.

>Nope. Are you suggesting that everyone who has passed a code test and is in
>favor of removing the Morse requirement has an alterior motive such as this?

It has been my experience that when someone is as vocal on a subject as you have been, there is a driving force behind these arguements. Generally, that force is a sense of loss.

It could be a loss of rights, loss of money, loss of self-esteem, loss of freedom-----you name it! But when you pull off all the layers of the arguements, and blow away the smoke screens that people create, there--at the bottom of the pile--will be the thing the individual is afraid of losing.

Since this is just a hobby (and not a life-or-death issue), one might suppose that you have been unable to upgade your license, or that a family member or friend wants a license and Code is the hindering factor. Either of these would qualify under the "sense of loss" theory.

This is not a judgement. A lot of good has come from such motivation--including the founding of this great country! The same possibly could be said of the No Code movement. However, since you asked about the analysis of your remarks, I thought you might find this theory of psychology interesting.

Curtis, I believe that you have posted that learning CW WAS a job for
you. You got paid to learn it, or face the humiliation of washing out
of the Navy ditty-boppers course and becoming an MP. How easy it must
have been for you to "earn" your ticket. Since your CW skills were a
part of your job requirement, I would compare your effort in amateur
radio to that of obtaining the No-Code Technicians license.
Perhaps some of the things that I have learned for my job should be
forced down your throat as a requirement for HF access. But then, I
don't think you could cut it as an aerographers mate.
73, Brian/N0iMD

322. FS: Simpson 360 VOM for repair or parts $20 or B/O

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-03 00:00:00 UTC
From: l.mclaughlin@popmail.csuohio.edu
Message-ID: <6b8030$2qo$17@csu-b.csuohio.edu>
Source record: 179439

SIMPSON 360 DIGITAL VOLT-OHM-MILLIAMMETER. Bought it and found I could not test it, because it uses a three prong unique sized Simpson extension cord that appears to be no longer available from Simpson (I tried to buy it). It has a battery compartment for battery powered field use, but one of the metal contacts need replacing so I could not test it that way. The point is I don't wish to put any money into it if I can't buy a power cord for it. I wanted it for bench use. I would guess that it does not run, but maybe it does? Probably good for someone who wants a back up parts unit for their Simpson 360. It's a shame, because the thing is a super unit in nice physical condition. Do not have leads or manual. $20 or best offer.

Plus Shipping costs which are not much. I'll pack it free.

-OR- Will take old running complete decent VTVM in trade.

Hi Steve. Thank your for your information but I have no way of knowing if CB is this Drew person or not. So, until he posts information that shows he is a ham, I will not accept that this young man holds a valid license based on the fact that most of his posts seem to have no other purpose than feeding the flame wars. In other words a typical internet troll. Most hams have better ways to spend their time. Like on the air. Personally I think it is time that we just start ignoring him.

Keeping standards updated and relevant to the technology of the day is
not a lowering of those standards. Why is this concept so difficult
to understand?

So, let me see if I read this right. Your assertion is that technology has advanced to such a state that parallel parking is irrelevant and consequently there is no need to demonstrate the ability to do it in order to get a driver's license?
(Remember it was your barb in reply to my observation on the deletion of the parallel parking requirement in Ohio started this current exchange.)

Now, I may ask, "Of course, you don't see the contradiction, do you?"

To no one who wanted an answer...

One of the oddest things we do on news groups is expect a straight answer.

Go here to a n.g., ask a question, and an reply will be forthcoming with the absolute best answer to the question we asked.

Great if it were true.

No one owes anyone a straight answer. Never have. Western civilization then has been declining since the ancient Greeks.

What's the best rig? What's the best antenna? - just tell me so I don't have to waste my time like the people who's experience, effort and money spent I'm relying upon, to tell me what's right from wrong.

All the answers start with the coil of a 1934 Ford model A. And some wire.

[Flame me! I love it! Make me write bad checks! Ooooh, I can hardly wait because I'll be blamed for not solving your problems!].

OK, I'm sorry, spend all of your money on a FT-1000D and a 200' tower, and move to a salt marsh, and win the lottery, and, really serious, Floss! damn it, every single day!

73,
N1XNC

PS - I built a Vertical out of floss and W.A.S. back in 1962. But then they floridated the water... :-(I blame the ARRL for this and the sun spot cycle.

So what's with the FT-920? I think it's worth a try now. Everything after the August [7H] serial # seems to be cool.

343. CW, NLP & Structure of Magic (was Re: Ban Morse Code)

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-03 00:00:00 UTC
From: tlang@freeway.DIALix.oz.au
Message-ID: <0e4_9802040700@freeway.DIALix.oz.au>
Source record: 179460
Cross-posted to: aus.radio.amateur.misc,rec.radio.amateur.misc

It's 02 Feb 98 22:06,
We'll return to richardm@zeta.org.au and All's
discussion of CW, NLP & Structure of Magic (was Re: Ban Morse Code)

ri> The ongoing Morse debate seems to be generating more heat than light,
ri> so I'd like to try turning the discussion in a more productive
ri> direction. Let's start with a bit of stir...

ri> If Morse were easy to master, using the conventional methods, then
ri> we wouldn't be having this discussion. Everyone would learn it and
ri> and pass the exam, then use it or not as they wished. So...

ri> Rather than wasting all this energy arguing about whether or not
ri> Morse proficiency should be required for an HF ticket, how about
ri> looking for more effective ways to master CW in the first place?

Good point. :-) I, personally have no problems with the exam, in fact,
a part of me wants to get the 10 WPM before it (as I believe it will,
some time in the future) is scrapped, sort of like climbing a mountain
because it's there. :-) The only reason I haven't got 10WPM (I have the
5 WPM) is simply a matter of priorities. More pressing needs and the
fact my interests lie in the VHF/UHF/SHF end of the spectrum, have put
Morse low on my list of "things to do". :-) That said, what dabbling
I've done in the mode has been enjoyable, not to mention the useful side
benefits of being able to recognise unfamiliar repeaters and decipher
distress calls on Titanic movies! :-)

ri> The "NLP" in the title of this message is short for "Neuro-Linguistic
ri> Programming", which is defined as the study of the structure of
ri> subjective experience. In NLP terms, every experience we have,
ri> whether it's performing a skill, or having a phobia, etc. has
ri> a distinct "structure". By exquisitely mapping out that structure
ri> and teaching the structure to someone else, you can transfer that
ri> skill. Or, you can change the structure, e.g. to cure the phobia.

<snip>

Interesting subject matter. Personally, I believe that each of us has a
strategy by which we learn most efficiently, whether the subject me
code, crafts or engineering. The trick is to know ourselves and then
apply appropriate techniques. NLP is one possible approach. :-)

ri> PS: For those of you desperate for code-free HF, get a 27 MHz CB,
ri> and learn the joys of QRP operation! It used to be an Amateur band,
ri> after all :-)

<grin>

Strictly speaking, 12 watts PEP isn't QRP, better stick to AM. <g>

... Disclaimed standards, apply :-)

Hi Jim
You have peak my curiosity concerning this antenna limitation problem.
May I ask, what are the limitations they have place on your antenna at
home?

greetings fellow amateurs

As you can tell, I am a pro-cw person.

The problem with cw is that it does take some amount of personal effort to both learn it and use it, until it becomes sort of like second nature to use it.

One of the problems with cw is that most people don't realise it's benefits until you either use it for a serveral months or a few years or until you discoverer it's benefit to you.

CW 'is' a very personal thing. It is more than a mode, like voice or packet, etc.

I realise that whether, or not, cw is kept on as an hf requirement will be determine by people who are completely outside my field of influence, but, I just hope then when they start to make the judgement call that they consider my thoughts and feelings, toward cw, before the final decision is made.

I would hate to see cw dropped for the wrong reasons.

Greetings fellow amateurs

Strange as this may seem, I am looking for junk mail. If, and I am sure you do, receive junk mail, would you consider forwarding your mail to me, before you delete it.

Why? I am doing a research project, of my own creation, concerning junk mail and I need a, reasonable, quantity of it to fullfill my data input requirements.

So, until further notice....

Gary Coffman <ke4zv@bellsouth.net> replied (mildly, given the provocation)
to John Miles <jmiles@pop.removethistomailme.net>, who lead with
this red flag:

> >The above is one point of view. Another point of view ...

All points of view are equal? Rarely.

> >never seen a scientifically-controlled test that has EVER conclusively

I guess you missed the cover article on IEEE Spectrum a couple years
ago (1996) which reviewed the literature and explained the theory in
good EE theory not just maybes and howsas but with dBd & dBm's.
It was the cover article, so you should find it with no problem at
any good library.

John should also that his not having seen it doesn't mean it isn't
there.

> I am content to stand by the conclusions reached by the FAA and NTSB

I'm much happier standing by their conclusions after I read the IEEE
Spectrum article.

>posted... Not my problem if you forget so easily...

I said AC power goes down so as DC power goes down under normal
circumstance. You may think you can use car batteries, but you are
out of luck:

1) Car batteries run out very quickly

2) You cannot recharge easily by using the car (or I will say using
the car in general) because
- Fuel is very expensive OR
- Gas station is down (because of no electricity)

Ever heard of a Generator or a simple battery backup system. CW supporters are the only human beings left that believe that the world will someday be reduced to using CW because all other modes of communication in the world have failed. Any organization or individual planning for emergency services will have more than one backup system and power source. The only part CW will play in that scenario will be to pass simple Health and welfare messages. The critical communications will be covered by more efficent means of communications.

You also no longer have to possess skill in operating a manual transmisson
in order to get a driver's license.

Is this also lowering the standard for the inept since many people can't
drive such vehicles?

Do you now see how lame you argument is? Of course you don't.

>the code on to see if you copied at least one minute of code correctly.

If you pass the question aspect by answering 7 (or more) of the 10
questions correctly, then there's no reason to examine the paper to
verify one minute of code was copied correctly. The test taker
passes the test by EITHER correctly answering 7 or more
questions OR copying one minute correctly. It isn't required to
answer 7 or more correctly AND have one minute of correct copy.

>Most VE teams will have you take the written test and then, if you fail the

More likly, the day will come when the FCC will recognise the
obligation it has to evaluate the appropriateness of the CW
requirement. Under such an evaluation, the FCC, as a government
agency must justify the continued use of the requirement
which ths requires compelling and rational reasons to
be put forth to kepp the requirement. In the absense
of compelling reasons the requirement will end.

Masa, I believe you misspelled your new nickname. I know your knowlege of
the English language is very limited, but the term that people of your
lifestyle use to describe themselves is "Cock Sucker", not "Code Sucker".
Did your parents ship you off to Canada because your homosexuality brought
dishonor to the family?

JV

More to the point, I truly can't think of any situation mandating a
need for morse code. Indeed, if there was any reasonable liklihood
of such cases, we'd have several examples every year. The
reality has been a lack of any such examples for a decade or more.

Source record: 179508

Greetings Olav,

The answer to your question depends on how "best" is measured... If you mean the best mechanically solid transceiver, the Collins KWM2A is tough to beat. I've seen one fall out of the back of an Army truck going 80KPH down the autobahn, bouncing and skidding for a quarter mile... we re-seated the tubes, hammered out the dents in the cabinet, and it worked!

If you mean the best performing receiver/transmitter combination in transceive configuration, the Drake line is difficult to beat. The TR4X/R4C was one of the best performers.

This or course, is IMHO only...;-}

Regards, Frank

>amateur radio equipment to be from only "approved" stores.

This is incorrect. The idea is to have equipment available, but to fully explain what it is (or is not). Radio Shack is cooperating by putting the LICENSE REQUIRED notice beside each item in its catalog and flyers. This is after complaints that the small, fine print notice at the bottom of the page was barely noticeable.

Sell anything you want in a truck stop. Just tell people what it is. There have been some very misleading advertisements concerning Amateur equipment. Nobody is well served by folks who are out to make a buck and who don't care how they do it.

>Nobody said anything about modifying the radios. You are
>>making the incorrect
>and discriminatory assumption that all potential
>>customers of amateur radio
>equipment at a truck stop would be purchasing them
>>for illegal purposes.

Yrac contributes this:
In a few cases, we have found the 10 Meter radios for sale in truck stops have already been modified and were placed "on consignment" by a radio technician. In the majority of cases, the radios were sold in unmodified form, but there was a technician in a small hut, van, or on-site radio shop who would modify them them for CB use for a fee. We are not speaking about isolated cases. This situation was found time after time in surveys along US interstate highways.

Truck drivers who hold ham tickets have been interviewed in person and on-the-air. Not a single one has ever reported that he/she had purchased Amateur gear at a truck stop (excluding accessories such as antennas or mic's). Drivers were asked about both HF and VHF Amateur gear. The most common suppliers to these hams were the large outlets with 800 numbers. Ham fests were a distant second, probably because of inavailability to over-the-road drivers.

It was the opinion of the hams conducting the survey that the target market for Amateur equipment in truck stops was unlicensed individuals. If the use by unlicensed persons was confined to the 11 Meter band or "freeband" frequencies, this would be a non-issue. However, experience has shown that some of the equipment ends up being operated on the design frequency (Amateur bands) through ignorance or curiosity.

Those who have posted objections to efforts promote the responsible sale and use of Amateur equipment are encouraged to study the matter in detail and to get the "big picture." This is not about "rights" or "availability". It is about "responsibility."

>, even if
>>SOME of the purchasers do
>indeed use their equipment for illegal purposes,
>>this is not the responsibility
>of the retailer.

Well, Old Thing....I have another whole posting about this subject, which I will hold for later. It has to do with the retailer putting his employee at risk--without his/her knowledge. Ever hang out at a truck stop C-Store? Picture the clerk, who may be a single mom, supporting her family. She shows up for work as scheduled, does her job, pays her taxes. If you like what happens

to this person if she sells liquior to a minor, you'll love what goes on when a Fed buys a modified radio from her! Now, before you scream that they won't throw her in prison for life, I'll admit you're right. But if you think nothing happens to her, think again. Maybe I'll spell it out for you, sometime.....but not tonite. I have a headache. HI HI.

372. The Necessity of CW

No Coders and Pro Coders alike are referred to a most interesting article concerning Amateur operation on 50 MHz and above in the current issue of QST. This is an excellent explanation of the value in knowing Morse Code in an area of the spectrum where one can obtain a code-free ticket.

The article's presention is fair and factual. It will give you five examples of instances where CW has an advantage. The article begins on page 86 of the February issue. If you are not a subscriber, you can purchase QST at many newstands and bookstores. If you prefer not to purchase the entire magazine because of anti-ARRL sentiments, I suppose I could mail you a reprint upon receipt of a SASE and $1.

>
> Curtis

The answer is quite simple. The first operator does the typing, the point at which errors are introduced from the original message. The other end does not need an operator to copy the message back onto paper, it is done by the machine which is using error correction to catch circuit errors.

Now consider a Morse contact. One operator copies the message from the message pad to Morse (a point where errors occur) and then another operator receives the message and copies it back onto paper (a point where errors occur). As you can see, there are two points here where human errors get introduced. This means that with large volumes of traffic, everything else being equal, more errors will be introduced in this circuit because there are more people involved.

Any scheme which reduces the number of people actively in the transfer will be better.

Mark.

Cecil you have a point there, about saving lives.
One time, when I had absolutely nothing else to do, started with the American

Civil War and assumed each person killed would have Fathered 3 children had
they not been killed. Then I assumed that each of those off springs would
have
had 3 children within 30 years, and those children would have 3 within 30
years.
I continued this process through WWI, WWII, the Korean War and Vietnam.

I realise that this was a very un-scientific project, remember I said I had
absoutely
nothing better to do at the time, and that my figures were probably way off
base
but the figure that I arrived at for what the World's population would be
today
had it not been for those wars was astronimical.

Those that promote code should be keel hauled, if the code saves just one
life
think of what it does to contribute to population pollution. Shame on the pro
code
bunch.

Still with a straight face, barely .. Curtis .. N5HDQ ..

Rather an arrogant assumption given the ability to operate
HF mobile so easily these days. One can drive and
operate HF, but it is not the case that one can study
code and drive. Perchance Jeffrey spoke a little bit
hastily.

Regardless of his language, I think some of his ideas
do indeed suggest he is 'crazier [note spelling Ed]
than a bed bug'. Remember back when he asked the NG
how he could talk to cops to say hallow(sic)?

Remember when he said that 0.00001% of the world
knows code?

Remember when he said that code practice
keys, oscillators and tapes (later the osc & keys were
retracted) were a major source of income for the ARRL?

Remember when he said that mobile rigs were useless
when the electricity went out?

Masa seems convinced that VHF HT's are the greatest.
I keep wondering why he is so interested in the code vs no
code thing. He can stay on VHF forever (I think with his
Canadian license) and never have to worry about code.

But come on. He is a young, college student. Speaks several
languages. Must be doing OK in school because he's still there.
Doesn't smoke dope or party all night like his dorm mates.
What's the problem with learning a simple thing like the code?
In fact, if I understand him correctly, he has already passed
some code test. Only had to study one day.

Just what does Masa want? Some of us might just be willing
to help. I welcome his humorous opinions and apologize if

I ever cross the line re the language barrier.

I'm sorry that I'm not fluent in Nippon or Francais,
neither are one of the three languages I am fluent in.

Thank you for the reply, Bill. More than Masa has ever
done. My point, if not clear enough for you to see, was
that I don't think Masa is as diligent or politically
active as you are in the pursuit of your anti-code
goals. Good for you getting your letters published
in the magazines. And good for you knowing the
code, evidenced by your advanced class license.

Masa is not licensed in or eligible for license in
the US. So why is he on the anti code bandwagon
for US amateurs?

Doesn't really matter one way or the other to me
if they drop the code requirement in the future.
But aren't you proud of your advanced class ticket
and what you had to go through to obtain it?

I think Masa is a real goofball but I think you are
really insecure if you can't come up with anything
else to say than to call him a Cock Sucker. Then
to bring dishonor and his family into the picture
is really stooping a bit low.

Not so, Mr. Sohl. I am thinking in particular of KE4BOB who listened to code tapes while driving. He recently upgraded. Just one example. I know many others.

And what about me? I operate 20 Meter CW from the car. Helps me keep my code ear in tune.

What's that? Glad you asked. 400,000 miles accident free.

That's right dude. Look at all those new fangled cell phones out there onthe roads
now. People are not paying attention to their driving. If they
had a manual transmission they would have to pay attention to their
driving, no time for that fancy gadget, cell phone.

As far as I know, I am eligible for license in the US.
If I can't obtain US license, I just use my Canadian one... or else I
use my Japanese one (which I will obtain soon)... obtaining
Japanese one is very easy since I already hold Canadian license.

>if they drop the code requirement in the future.
>But aren't you proud of your advanced class ticket
>and what you had to go through to obtain it?

I have one code and I have Canadian advanced.

I am not proud of my license if the amateur radio corrupts (less
people).

The license no longer means anything.

If IC decides to eliminate Canadian advanced and code to keep amateur
radio active, I don't see why I have to complain.

ditti dum dum ditti wa operator ..... ditti dumm dum ditti wb operator copies
ditti dum dum ditti aa number of ... 136.23 ditti dum dum ditti 136.23

plus a few others. That is how cw ops take care of error correction.
If a group/word was not obvious we would usually verify it .. one wrong
number in a position where the Admiral wanted the Captain to have his
ship at xx hours if copied/sent wrong would have the ship somewhere
else at the appointed hour. This made the Admiral very unhappy and he
would let the Captain know about it in no uncertain terms. Guess what
happened to the operator who sent/copied it wrong .. You don't even
want to know.

Find somewhere else to operate besides radio frequencies that are owned by the public. Then you can make that demand.

General class upgrade class - Monday nights at 7 p.m. in Laurel, MD.

We started last night BUT it was overviewish. In other words, you only missed one class of many.

A Novice or Technician license is a recommended (but not required) prerequisite.

We also started with A, N, E, I, O, S, T, and M. The class will be running for about 8 weeks and is being taught by a dedicated group of elmers.

If you would like to upgrade in a group setting,
this is your chance.

E-mail or call for more info! We had 11 students last night.

> 73, Cecil, W6RCA (not speaking for my employer)

I'm glad someone brought this up, forget about 'emergency' for a while. The common use of Q codes, and abbreviated words enable people to communicate using different languages in CW for two reasons. One, it gives the non-english speaking operator a chance to formulate a few phrases like RIG HR IS HMBREW MOSFET 5WATT TO DPL. Two it allows the non-speaking operator to read once or twice what you have sent and decipher. Where he may not be able to understand "How yall doin taday?" because of an accent or improper pronunciation (something were all guilty of at times) He will most certainly understand "HW ARE U TODAY" Yes it is basically in English but I have found most CW op's easily understand this and can respond with much more for the resons listed above.

It's a wonderful common denominator, and since there is really no mode that you can run on HF that you can't run above 50MHz then the only thing left is the fact that these bands are open to other parts of the world. What better reason to keep this 'common denominator' for us and our collegues around the world.

73, Tim

CW doesn't make good hams only, but good operators for any service!

CW isn't a modern form of communication, so it is very slow. It is
difficult to get the sence of a message through!

This is a very good training for effective communication, because it
disciplines to make best use of a communication channel.

Unfortunately not all CW-operators get to this point! But at least you
have the chance. If you look at voice operation it is often a lot of
nonsence before you see, where the operator aims at!

For me CW is for communication, what learning sailing is for maritime
training! It's not neccessary, but it gives a much better insight into
character of it all!

Cross-posted to: rec.radio.amateur.misc,uk.radio.amateur,rec.radio.amateur.equipment

Apparently to convert a FT747GX to provide continuous transmit capabilities between 1.5MHz - 30MHz you cut a wire and dial up a certain frequency, switch off the radio and then switch it back on again and hey presto you have general coverage TX/RX. The details for this modification seems to be widely available.

However I am interested in reversing this modification, back to its correct HAM band / General coverage RX configuration. Has anybody successfully tried it?

Is it just a question of reconnecting the cut wire?

I thought I would just ask before I damaged anything whilst attempting to reverse the mod.

Thanks.
Greg.

As usual Dick you have twisted the meaning to suit your purpose. The chance that CW will be the only mode available or that can get thru in an emergency is so low that it is not worth even discussing on the newsgroup. I never said that CW may never be used in an emergency again but your assumption and others that it will be the saving mode when all others have failed is pure bull*%*@ and you know it. Use CW as much as you want, but don't throw a little paint on a Model T and then try to sell it to the rest of us as a Mercedes Benz. I have no trouble with CW as a mode of operation or the

people who use it to communicate. I just don't believe it should be used as a filter to limit access to the HF Frequencies.

Nobody wants to take away your code. You are free to use it as long as the ARS continues to exist. What the no-code-test folk are trying to do is not a big thing. We are trying to get an outdated federal testing requirement removed which will absolutely not affect anyone's right to learn or use Morse code.

And sadly Glenn, That is exactly what they want to do. They want to reduce the standards to the lowest level just because some folks are just too lazy to apply themselves to something to reach a goal. There are many no-code hams who learn code and upgrade. I sure haven't heard any of them whine about all the big bad work they had to do. These guys must piss off the kill the code crowd worse than we do..

But Tim, nobody wants to get rid of this 'common denominator'. All hams would still be free to use it or not when the Morse code testing requirement is dropped, just as they are today. Also, those Q-codes and Phillips codes work just as well on TTY/AMTOR/PACTOR as they do on CW for bridging the language gaps.

Last summer, while I was in daily PACTOR contact with N5AQM (who was on sabbatical in the NW USA) my electricity went off. My transceiver and PACTOR TNC didn't skip a beat and didn't know that my deep discharge battery had automatically switched in. My rig doesn't care where the 12 volts DC comes from. The battery is recharged from either the AC mains or from solar cells on the roof in Queen Creek, AZ. The only thing I have to give up when the power fails is my SB-201.

Aw Curtis we can let them know our secret.... Coded hams can drive, shift, operate cw mobile, and eat a quick meal while driving through the worst of conditions. The dexterity and multitasking abilities we got when we learned code gave us the ability to do so. We don't need no stinking manual transmissions. ;-)

I agree, which is why I think relaxation of the ITU treaty mandatory Morse testing requirement should have a reasonable chance of passage when it finally comes up for a vote.

Still, that's 22.5% of your operating time spent on CW. That's more than "never or rarely" isn't it?

Morse code testing is not a character, moral or work ethic issue. It is a
federally mandated requirement that many of us feel is in need of change.

That's because we are famaliar with the equipment we are using, from twisting all those knobs while learning the code. These Johnny come latelys with their off the shelf in the car phones have to look at the buttons to figure out what they are doing, that's when they are a road hazard.

GO TO THE SEARCH ENGINES, YELLOW PAGES, OR TRY ASKING A HAM IN PERSON.
most of the people who post on n/g are just bored with no knowlege of of
anything asked.

case in point. i asked for opinions on the ft-8100r. bert was the only
email i got that stated the experience he and his friends had. the other
27 emails said either
"a piece of S%^t " or " dont have one but i like the &*^^%$ i have"

so that means 2 in 29 people have a brain.
And considering this i think me and bert have better things to do.

P.S. what happened to AMOR.

I guess if you are going to school, live in a dorm, and have no means of
support other than the weekly stipend mommy mails you, it might be a problem.
For the rest of us, given the choice of wasting a $2.00 gallon of gas or
freezing to death, I think we'd take the gas. But that's okay, you save
your money.

>>> - Gas station is down (because of no electricity)

This is pretty funny, coming from you. I work in the public safety field.
What do you do (other than post to USENET?)

> Gas stations are NOT
>open. If you want to steal the gas, go ahead.

Stealing is not an issue. Using a siphon pump, I can just as easily get
gas from my neighbor's cars to use. Siphon pump != stealing. Its a tool,
to be used in an emergency. Of course, if you had a clue, you'd realize
that.

A millionaire? Well a 55 gallon drum of gasoline at $2.00 is $110, an average monthly heating bill during a cold winter. So while your family is freezing to death you'll be counting the money you saved by not using your portable heater eh?GOOD THINKING MASA!

>

Masa, did you ever consider that people would gladly give a gallon or two of gasoline from thier car tanks if you were providing an essential emergency communications?I'll bet my next paycheck that if you contacted the gas station manager and told him you have a generator to help run his pumps he'd be more than happy to open up shop. Do you think by this time people are needing gasoline to run generators and heaters? Hellooo.
I'd love to see what you would do if ever stranded and had to make due with what you had. Doesn't sound like you have any common sense at all. But then you wouldn't be near as entertaining if you did.

Sorry Cecil, I am not a bleeding heart liberal who believes that
everyone is a
victim, no one is responsible for anything. Neither do I respect someone
who
has not had to work for what they get. I had my first job at 13, working
after
school and on Saturday in a small grocery store.

What on earth has the fact that you had a job in a grocery shop at 13 have anything to do with Amateur Radio and whether compulsory Morse exams are required?

I wouldn't have thought 13 was especially young to have a job anyway. I was delivering papers 7 days a week when I was 11 and there were kids younger than me - this actually has nothing to do with Amateur Radio either, but I thought I'd throw in my hard luck story as well.

Of course, I can't say that I don't respect people who try to get sympathy by telling "You think you have it bad, when I!! was kid, we had to live a shoebox" stories, because I just did it too. Oh well, next time ;-)

Mark.

Code_sucks blew more smoke by saying:
>
>and that's why we are going to lose amateur bands because no one has
>time to care about amateur.
>
>

Please shut up if you don't know what you're talking about. If you had any personal awareness of the person you attacked, you would know that this individual spends over a hundred hours per year training prospective Amateurs, assisting in tracking down intruders to our bands, getting favorable publicity for our hobby, and writing legislators about bills which might adversly affect us (like the scanner bill). His work is at his own expense. He once told me how much of his own money he had spent in one year directly to benefit Amateur radio. Believe me, sir, you would have liked to walk into a hamfest with that sum to spend on your own selfish interests. How about doing one small thing for ham radio......stop discouraging those who are trying to keep it a great hobby!

Just as a reason to explain why I am not impressed by people who get
something without working for it, ie a no code ticket to get on HF.

If you delivered papers at 11 that tells me you were a city kid. I grew
up in the County, kind of hard to deliver papers there without a car.
When I was 10-12 I had to rely on pedaling my bike up and down
the highway picking up beer/coke bottles for the deposit on them.
I could make more money that way than I could by using the old
reel style push mower to mow lawns at the few houses on the lane
I grew up on.

>address, Social Security number, mother's maiden name, next of kin, etc., on
>here, you're automatically branded as unlicensed.
>
>
Well, let's see if we can prove you're a ham some other way, Rambo. Looking at the postings you do on rec.radio.cb, I notice that you NEVER miss a chance to slam Amateur radio.

If someone asks a question, you reply something to the effect that the Hambo's will give them incorrect information, or that the Hambo will tell them they're doing something illegal.

If someone advises freebanders to remain below 28.0 MHz, you immediately start telling everyone that it won't matter because (a) 10 meters is not in use by hams, (b) there is not such thing as the FCC any more, or (c) the truckers are up there already, so who cares?

If anyone (even a fellow CBer) comments on the quality of communication heard in the Citizens Band Service, you jump in with, "Shoot, that ain't nothing. You ought to hear the garbage the hams spew out on (a) 2 Meters (b) 75 Meters."

Looking back through the cb newsgroup, as well as seveal Amateur NGs, I DO NOT SEE A SINGLE INSTANCE where you have given any indication that Amateur radio is a great hobby, that it has any socially redeeming value, or that you are proud of having a license.

In contrast, Rambo, there are numerous posters to this newsgroup whom I am firmly convinced hold ham tickets, even though they do not provide their call signs. They defend the hobby against inflamatory postings like yours. They exhibit a sincere concern that the hobby survives. They speak of Amateur radio with pride (regardless of whether they are Pro Code or No Code).

If it doesn't walk like a duck, or quack like a duck, it either isn't a duck, or it wishes it were not a duck. Which is it, Old Son?

Well, now we have an interesting paradox, don't we? If you choose to believe the ASSumptions of the other HAMBOs on here who swear up and down that I am Drew from Kansas, then you must also believe and admit that I am a licensed amateur who has passed a Morse code test. On the other hand, if you are convinced that I am NOT a licensed amateur and simply a wannabe CB'er, I cannot possibly be who your HAMBO brothers say that I am.

This is going to be fun to watch :-)

Frankly, my dear, we don't give a damn if you are a licensed ham or not. All I said was your postings appear to be those of a non-ham, or of a ham who is not proud of having obtained a license. What's interesting is that you brag in this newsgroup about being a ham, and in rec.radio.cb, you slam Amateur radio against the wall, every chance you get---even introducing the subject when the CBers want to remain on topic and discuss the Citizens Band Radio Service. What? Do you think people read only one News Group?

Rambo added:
>
>This is going to be fun to watch :-)
>
>
So you ARE a troll. You just like to see how much controversy you can stir up so you can see your name in print. The truth is out now, buddy. (Interesting how some folks in both newsgroups saw you for what you are, months ago.)

Given an unlimited budget and infinite resources, naturally CW isn't the "best" mode to get through when all others will. Of course there are digital modes that will kick CW's ass.

However, we all don't have unlimited budgets and infinite resources. We have only those resources at our disposal, and in the case of amateurs, that means FM, SSB, and CW, in descending order. Of those three modes, CW *will* "get through" when both voice modes fail.

467. HELP WITH RADIO AMATEUR CALLBOOK

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-04 00:00:00 UTC
From: eespejo@concentric.net
Message-ID: <34d83466.5610377@news.cris.com>
Source record: 179357

Does the radio amateur callbook list all the international members by name and in particular someone by the code EB2BVV located in the IN92ET area?

I hace received life threats from this individual and I would like to file a report. Thank you very much for your help.

Emilico

469. ICOM - 706 vs. Mk-II --- Opinions?

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-04 00:00:00 UTC
From: Mike Banz <mikebanz@ix.netcom.com>
Message-ID: <34D886FE.1F2E@ix.netcom.com>
Source record: 179359
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.misc

Hi All:

I'm considering buying a used IC-706 vs. a new 706-MkII. Used prices are ~ $800-850. New Mk-II's are available at ~$1200 with free separation kit and DSP filter.

Any comments about differences in functionality between the 2 models would be greatly appreciated.

Please email as well as posting.

Thanks in advance for the assistance
Mike Banz

470. Kenwood TS-450S/AT -- Opinions as 1st HF Rig?

Hi All:

I'm considering buying a used Kenwood TS-450S/AT as my first HF rig.
I'm also considering IC-735 and IC-706.

Any comments about differences in functionality between the 3 models, or
suggestions for alternatives in the $500-1000 price range would be
greatly appreciated.

Please email as well as posting.

Thanks in advance for the assistance

MAJOR NEW SOFTWARE RELEASE ANNOUNCEMENT

We are very pleased to announce the release of Version 1.4 of SWARM
PROPAK, our Professional Solar Warning And Realtime Monitor software
package.
The software subsets of SWARM PROPAK are also available as Version 1.4:
SWARM RADPAK and SWARM STORMPAK.

This software requires Windows 95 and a connection to the Internet
(either hard-wired or through a standard dial-up Internet Service
Provider).

SWARM PROPAK is now the ONLY software in the world for PCs that is
integrated with an effective EARLY WARNING SYSTEM capable of detecting and
audibly alerting you to the arrival of interplanetary disturbances from
the
Sun up to 60 minutes BEFORE they impact with the Earth!

This major breakthrough is made possible by SWARMs NEW ability to
read,
process, graph, print and interpret realtime solar wind data from the
newly
launched Advanced Composition Explorer (ACE) spacecraft. This spacecraft
is
currently providing approximately 23 hours of continuous solar wind
measurements each day. The data is received by ground-stations in Japan
and
the U.S.. It is then immediately transmitted to the Space Environment
Center, where it is instantly received and made available over the
Internet
for SWARM to read and use.

The implications of this new software capability are staggaring!

For example, for the first time in HISTORY, amateur radio operators
can
use the approximately less than 60-minutes of lead-time to turn on radio
equipment and prepare for possible ionospheric enhancements that often
accompany the arrival of interplanetary disturbances! They can also
determine PRECISELY WHEN geomagnetic storming is likely to commence (with
an
accuracy measured in MINUTES!) as well as the potential INTENSITY of
geomagnetic storming!... All BEFORE the disturbance even reaches the
Earth!

People interested in the northern lights can get ready to watch for enhanced activity. They can even determine (up to 60 minutes beforehand) how strong auroral activity might become! The art of predicting the exact date, time, and potential intensity or resulting visibility of auroral activity is now as simple as watching SWARMs data plots and heeding the audible warnings!

Professionals can use the lead-time to turn on instruments and prepare to study the interplanetary disturbance impact with the Earth's magnetosphere. Hydro operators can prepare their systems to handle the additional induced electrical currents that can damage electrical power systems during geomagnetic storms. Surveyors can be alerted to possible errors in magnetic readings. Satellite operators can watch equipment for possible electrical and/or pointing anomalies. The possibilities are almost endless.

For more information and sample screen captures, visit the WWW page:
http://solar.uleth.ca/solar/www/swarm.html

Make sure you are prepared for the solar maximum! Solar optical flares are expected to increase to a frequency of over 22 PER DAY over the next two years, and more than quadruple in frequency over the next year!

We will provide individuals who own Version 1.2 or higher with a FREE UPGRADE (over the Internet) to Version 1.4! Contact Oler@Solar.Uleth.CA for instructions on obtaining and installing this new version of SWARM. Owners of software prior to Version 1.2 can upgrade to SWARM PROPAK for $100 USD.

Current software prices follow:

SWARM PROPAK: $300 USD each.
Highly recommended, full-featured, unlimited functionality.

SWARM RADPAK: $119 USD each.
For those who don't require as many features as in PROPAK.
Does NOT include the Early Warning System features.

SWARM STORMPAK: $99 USD each.
For those who don't require as many features as in PROPAK or RADPAK.

(There are no subscription fees or other hidden costs required to use SWARM.
The data is public-domain and free of charge. The software is a one-time

expense and does NOT time-out or expire.)

To order, send a check or money order (VISA instructions are included below) for the amount listed above to the "Solar Terrestrial Dispatch", at the following postal address. Please make certain you state what software package you are ordering (PROPAK, or RADPAK, etc), and whether you require the software shipped to you on five 3.5" HD disks or whether you would like
to obtain the software over the Internet instead. Please also include your
e-mail address(es) and postal mailing or shipping address. Send your orders
to us at the following postal mailing address:

Solar Terrestrial Dispatch
P.O. Box 357
Stirling, Alberta
T0K 2E0
Canada

Or, you can FAX (or postal mail) us your order with your VISA credit card information for more rapid delivery. Include in your FAX the name of the card-holder, the VISA card number, the expiry date of the card, your voice telephone number, your FAX number (if available), your e-mail address(es), the product you are ordering (PROPAK, or RADPAK, etc), and whether you require the software shipped to you on five 3.5" HD disks or whether you want to obtain the software over the Internet instead. PLEASE DO
NOT SEND YOUR VISA CREDIT CARD INFORMATION OVER THE INTERNET. FAX OR POSTAL
MAIL IT TO US INSTEAD TO ENSURE PRIVACY AND CONFIDENTIALITY. Please also make certain you state your postal mailing address so we can return a VISA receipt (and the software if you are ordering it on-disk) to you.

You can FAX your orders to one of the two phone numbers listed below. The first phone number is a voice-mail / FAX system that will require you to
select the FAX option using your touch-tone phone. The second phone number
is a dedicated FAX machine. If one of these lines are busy, use the other phone number.

Primary Voice-Mail / FAX Line: 403-756-3008
Secondary FAX-Only Line: 403-756-2380

If you have any questions or concerns, feel free to e-mail them to Oler@Solar.Uleth.CA, COler@Solar.Stanford.Edu, or FAX them to us at one of the numbers given above.

Hi Mike,

Assuming a high Q, the filter will only be a low impedance (to ground)
to signals at or near the target frequency. At all other frequencies,
it will essentially be "invisible", and should not affect VSWR.

Since it sounds as if this is being used in your antenna system, have you
considered a tuned coaxial stub, rather than a resonant LC network?

73, Hans

475. Subject: Code

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-04 00:00:00 UTC
From: sciguy8000@aol.com
Message-ID: <19980204164301.LAA19096@ladder03.news.aol.com>
Source record: 179365

It has be come clear to me that the code has a place
in the scheme of things. The setup now is truncated
and out of balance.
It should be:
Tech no code

Novice or Tech+ 4 wpm

General 9wpm

Advanced 13wpm

Extra 20wpm

The above makes sense, is rational
and realistic.
Why should the General be 13 wpm and the advanced
not need any code??? It is out of balance.
By changing to my scheme the code would advance in
stepwise fashion as you study the theory you would advance your
code in a smoooth stepwise fashion, too.!! It happens in
bite-size chunks, easily mastered by most people.
Think about it instead all of the arguing and stupid
name calling of the past.

Please document exactly which HF bands WE are going to lose. If I were
you, I'd be very concerned about the privatization of the RAC. Looks
like you could be paying some major bucks (at a 22.336% discount) to keep
your license

A nice site except for the fact it's been deserted by its supporters.
Notice, there have been no new issuance of memberships

If you look up under Drew Durigan, you will see, unfortunately that he does indeed hold a valid license KF4DDM. I say he holds the license, for as you observe he is only an amateur in words only, not an amateur operator. A racist that got him tossed off his last job, Drew or Spew as he is affectionately know is well versed in things that go opposite most normal conversations. Drew has advocated going to people homes and vandalizing personal property. He is a sincere believer that everyone should be sued to force them do do his bidding and off course he is a well known racist. You will not see Drew offering any help, in fact he's at best a second rate word warrior (I think that's the term). You will however see that the NCDS..The NoCode Double Standard exists with him as well. The NCDS simply put is...all no coders stick together. Even if one of them spouts lies, innuendos and blatant falsehoods, no no coder will jump on him. Should a procoder say the same thing, all no coders jump on him. It's an incredible thing to see. A no coder will say...I transmit voice on 30 meters and the silence is deafening. A Procoder says..I transmit voice on 30 meters and the no coders come out of the woodwork like carpenter ants...

Hope this helps clear things up. Oh did I mention Drew is an affirmed racist???

If you want to be wise, DON'T BUY AN ICOM!
I just did and boy am I sorry! These Icoms are plagued with bad PLL problems that require replacing the cheap, plastic trimmer capacitors with ceramic ones (which Icom should have used to begin with). Get a Kenwood or a Yaesu.....or better yet, get a good old Drake C-line. Avoid PLL digital radios at all cost.....KB4AEP Mark

>>
>> Is it just a question of reconnecting the cut wire?

Yes. It's a loop of wire which emerges from the front panel and goes
right back into the front panel. I think it's brown and toward the
left side.

I don't think you even have to turn the rig off, just re-connect the
wire and the "GEN" indicator goes off. This tells you the general
coverage transmit is gone. You may need to reconnect the wire
then turn the rig off and back on. But it's way easier to undo the
mod than it is to do the mod in the first place.

After this, if you try to transmit out of band, you get an "Error"
on the LCD panel.

Mike,

The IC735 is an EXCELLENT rig, and having owned these as well as the other units, well, I still have three Icom IC735's for mobile/portable/backup use.

The 706 MARK II has worthwhile improvements over the original 706.

The 450's are a nice little rig, although some problems/design errors were made and have been well documented - see QRZ mod lists.

All three units you mention are reasonable rigs for this price range. Suggest you find someone with the units that will allow you to tune around and see if the bells and whistles of one beats the other for your interests.

Bests

I realize your reversing the mod but this is interesting. While the final is solid state and no doubt using broadband transformers isn't their still individual bandpass filters for each amateur band? The question is, even if you converted for 1-30MHz transmit wouldn't you still have a problem if operating on 5MHz for example 1/2 way between 3.5 and 7MHz? Wouldn't one of the bandpass filters have to be in line or am I just out of my tree?

Oh I think the state of Amateur Radio is just fine Larry, if you look closly most of the mud slinging (yea, I've thrown a few handfulls) is done by a small group of 'regulars' probably less than 100 which is a very small fraction of amateurs, if you look in other places you'll see lots of really cool things going on. One of my favorites is two guys who started a QRP club in the SF, CA area they figured they'd be happy to get 30 or 40 amateurs in the area who are interested in QRP and hombrewing within just a few years the club had grown to a membership of thousands, they publish a quarterly called QRPp, which includes schematics for building, QRP contests & results, etc. Members design rigs, the club makes boards and kits them at cost + a little to fund the next project. Their latest tranciever the 38 Special sold over 2000 units if my numbers are right, and at a cost of $25!! I built one and filled several pages in the log running 300mw on 30m. The club members have designed some really great radios and sales reached the point that one memeber started a company, Wilderness Radio, who continues to sell the projects the club has done in the past.. I think it's a wonderful success story and I tip my hat to the two gentlemen who started it. Check them out at:

http://www.fix.net/~jparker/norcal.htm

I'm sure there are hundreds of other success storys just like this one you just have to look past rec.radio.amateur .misc

Mike. At the top of your price range you get a nice used Kenwood TS850 or Yaesu FT990. Both these rigs are top notch performers that are a definite step above what you are considering. I have seen both of these rigs with internal antenna tuner listed on this newsgroup for $1000 or maybe even a little less! The Yaesu FT990 comes in two versions. The cheaper one would be the FT990DC model which has no built in power supply or otional 500hz cw filter. I personally own and prefer the TS850, but either one would be a great rig for you that would probably satisfy your needs for quite a while.

CHINA HAM NEWS 2/4/97: BY1QH EME Schedule

Courtesy of Lasse (BY/)SM0KAK & David BZ1BM
Tsinghua University Amateur Radio Club, Beijing, China

* * * * * * * * * * * * * * * *

To members and friends of BY1QH.

You are all most welcome to participate in the following activity!
Please contact David BZ1BM or Lasse SM0KAK if you plan to show up.
Note that our cances of making a EME QSO before 1630 UTC (0430
local time Sunday morning) are not too good due to local QRM.

BY1QH WILL BE QRV ON 144 MHz ON SATURDAY, FEBRUARY 7
This is the first time we are QRV in a EU window except for last
ARRL contest. Make sure you are the first in your DXCC to work BY
on EME! So far only SM, W and VE have been worked from BY.

UTC
1130-1230 EME random.
1230-1300 TEP sked SSB 144.136 MHz with VK6XLR
1300-1330 EME sked with PE1LCH, PA2CHR tail end. QRG unknown NW.
1330-1600 EME random
1600-1630 EME sked with PE1LCH, PA2CHR tail end. QRG unknown NW.
1630-1800 EME random. From 1700 our local QRM is less bad!
1800-1830 EME sked with PA2CHR. QRG unknown NW.
1830-2035 EME random
2130-2230 CQ DX 1827 kHz +/- QRM, 400 W & dipole at 30 magl

During these hours we will be QRV on +86-10-90854674.

We will not accept more skeds (PE1LCH and PA2CHR have lent/donated
major parts of the station). On the other hand you are welcome to
send an e-mail to era.sm0kak@memo.ericsson.se telling that you
will be calling us, and what time periode you plan to be QRV. This
might help us to pick up your call sign. Will anybody be able to
be QRV in the first hour (1130-1230 UTC)? The moon will be below
the horizon in most parts of EU and NA then.

All RANDOM EME is on 144.136 MHz, using 2 minute timing, BY1QH
transmits in the "first" period. Please spread out +/- 1 kHz!!
(We will not move our TX)

We have lots of birdies and local noise. The QRM situation is also
not stable. If you spread out it makes it much more likely that
one of you picks a clear QRG! If you hear us and call us, please
do NOT give up even if we give no sign of copying anything! Keep
on calling. This goes for all stations, even if you run several kW
and lots of aluminium! Suddenly the QRM drops and we can copy you.
Stations like W5UN KB8RQ and VE7BQH have been totally impossible
to detect, and then after hours of calling and listening the noise
goes down. Also average size stations have a chance if you can
copy us. During the ARRL contest we copied 4 yagi stations
running 1.5 kW.

Station improvements since 1997 are:
Improved elevation readout at low elevation angles
New RX filter 250 Hz (500 Hz B4), and new PA.

Other equipment same as before:
IC-706 Mk2
SSB electronics pre-amp 0.8 dB NF in mast head
4x9 el Vargarda, total gain 17.7 dB
Stacking loss 0.5 dB, feeder loss 0.7 dB
QTH: LOC ON80DA
Tsinghua University in Beijing
73 ES CU VIA EME
Lasse (BY/)SM0KAK & David BZ1BM

>don't care.

Obviouly you have never been to sea. Speaking from my experiences, every US Coast Guard ship at sea still uses celestial navigation daily in addition to electronic means. The navigation officer, along with his quartermasters, can be seen on the bridge wings several times per day "shooting the sun."

I sailed a boat from Honolulu to San Francisco using just celestial nav. Every commercial ship I came in contact with said my stated position was quite close to the electronic fix they provided (via Channel 16 VHF). Upon getting closer to the coastline, I used the radio beacons. Another simple yet accurate system.

>If you want to transmit CW 500 KHz when you are dying (at sea), go
>ahead. We don't care.

Yep. We periodically hear of distress comms still being conducted on 500 kc. Twelve 4-second dashes, with 1-second spaces, will still cause Auto Alarm receivers all over the Atlantic and Pacific will cause bells to ring lights to flash. Simple, yet effective.

Jeff KH2PZ (former Coast Guard comm officer)

How? The examples you give below sure don't address
your concern.

>Nocoders want the code dropped for hf access.

Nothing wrong with that. There's no natural law that
requires code knowledge to use HF. There's only
the ITU treaty (1 wpm meets that requirement), and the
US requirements per the FCC part 97. Both the ITU
and FCC requirements can be changed and that is
the ONLY thing the nocode TEST group is working
towards.

>Cbers want to use amateur equipment on 27 mhz.

Just what does that have to do with amateur radio? Has any
amateur said they should be so allowed to?

>Even this newsgroup seems more like a battle field then a help group.

Discussion, debate or whatever. This newsgroup(s)
are here for that purpose as well as just being a help
group.

That is unfortunate Dick. Some of the best ideas have come from the new guy that was thrown into a pool of old fellers. The new guy, having not "worked this way forever" was not encumbered by same. The old fellers having "Worked this way forever" assumed it to be the only way and after all, it seemed ok to them, so why change. One qwick question, are you really on the Welcoming Committee, and if so can we vote you out?

BTW, I'm an old farte and I hate it when my grandaughter shows me something new in these areas I have lived in for years. But when she leaves I grin and jump all over them telling my wife all the new stuff I figured out.

Regards

Ed

Hi CB. It seems more a point of credibility. It is hard to take seriously anything posted by someone who will only identify themselves as CB RAMBO, or CrACKeD. By coming to an amateur radio news group with the name CB RAMBO you are going be labeled a troll. Coming in using a name like CrACKeD? Who knows? Hacker? Drugs? Broken egg?

My My My Senior "JV", do you talk to everyone you don't like nor know
that way? I don't know who you are unless JV does spell a name in some
language unknow to me, but I can guess you are 1. Extra Class tested at
or above 4000 wpm and 2. on the welcoming committee for ARS.

Assuming the above to be correct, rave on, if not, be careful how you
talk to my brother.

I've had my Kenwood 450s for over a year and love it. No problems at all.
IT's a great rig as far as I'm concerned. I'm also thinking of getting the
Icom 706 Mark II as well for the 6 meter/2 meter SSB capability. I've heard
nothing but good things about it.

73,
Tom

Howdy all, name is Pat and I've got a Kenwood UT-50s 6 mtr module for sale. Works in the Kenwood 641, 741, 642, 742 series radios. List is $369.00 AES price $329.00. I'll let it go for $275.00.+ shipping CONUS.

I am looking for a Kenwood UT-220s 220 module. Will trade the UT-50s even up. Will pay up to $275.00 + shipping CONUS. Drop a reply if interested.

What? Do you think people read only one News Group?

Wrong answer. I never "bragged" about being a ham. I merely responded that yes, I do indeed hold a valid amateur radio license and have passed a Morse code test. This was in response to incorrect allegations that I did not hold a license.

Not at all. I'm just interested in seeing which "slant" my adversaries take, given this most interesting paradox. Either I'm not Drew from Kansas or else I do not hold a ham license. Can't have it both ways.

>Is amateur radio falling apart?
Tell me, is amateur radio falling apart?

Already has. All we need now is for the old guard to hang on to their respirators for a few more years with their Morse mandates. This will insure insufficient numbers of new hams entering the hobby. Consequently, the bands will be auctioned off to well-heeled commercial interests and amateur radio as we know it will cease to exist within 5-10 years. Probably closer to 5.

Which very few amateurs will do. These guys will drive 10 miles to save 2 cents a gallon on gas; do you really think they will PAY for a license. Nope. But this is all part of the master plan. This will further erode the numbers of licensed amateurs, allowing commercial users access to the (former) ham frequencies even earlier than was previously expected.

Mike,

Someone else suggested that, for a price around the top of your range, you could buy a Kenwood TS-850S/AT. I whole-heartedly endorse that suggestion! As a former owner of a TS-850, I can say without any hesitation that it's head and shoulders better than the other rigs you're considering, and you WON'T be sorry. The '850 offers superb receiver performance (you can't work 'em if you can't hear 'em!). The automatic antenna tuner also works VERY well, and it's fast and quiet with band setting memories. The TS-850S/AT is truly a great rig with contest-grade performance.

I have one negative comment on the IC-735. A few years ago, at our club's Field Day operation, we had three HF rigs going: an IC-735, a Kenwood TS-430S, and a Kenwood TS-130S. The two Kenwoods worked just fine; although we had minimal interference and blocking, those two stations never missed a QSO. The IC-735, on the other hand, had an awful time dealing with the front end overload from the two Kenwoods, and we eventually shut it down and abandoned it, and ran only the two Kenwood rigs. This was, of course, the ultimate in punishment for a receiver, the "acid test", so I'm not sure how or if this would affect your day-to-day usage. In any event, the two Kenwoods held up wonderfully.

The IC-706, while a good performer in the Mark II version, is not intended for mainly fixed-station use, and doesn't offer the big performance and many features of something like the TS-850S/AT.

If you're really interested in a small mobile-type rig for HF, I'd recommend the Alinco DX-70T. They got for around $700 used. I've owned and used one and liked it very much for casual use. It's not a contest-grade rig, fur sure, but a good performer for normal use.

I think that instead of bandpass filters the output uses lowpass filters for each band. Either that or the bandwidth is wide enough to let a range of frequencies through.

Really? Gosh, I hope whoever developed the 850 did not come up with their
web site.....yikes, what an obfuscated mess.
I just wish the IC-706MKII had the DSP they now have come out with (sigh).
A notch filter would have been nice on it.

How about the fact that the last article posted was 6 months ago. How about the fact that if people were flocking to join, there would have been some news as to membership, other than little sig lines stating Join and save..kinda reminds me of my grocery store savings card or the discover card...he he he

You'd think if the site were so active you have more than 6 people even mentioning it...less see...Code Sucker..Bill..Carl..and I believe 2 or 3 others...hmmmm very active indeed.

Well as Bill states, lets wait and see what the future brings.. Proabably a brief flurry of activity and then back to the shadows again. Most Monday morning quarterbacks./armchair general types seen here fit that pattern

Mike:

I have a 706 Mark II. Was a bit to early and missed the free DSP offer.
It's a great rig...I think you would do well to spend the extra money, get
the warranty, the 20 watts on 2 meters instead of 10, the bigger speaker...the
free DSP kit, etc. etc.

look at last January's QST for a write-up on the Mark II and comparison with
the original 706.

This is one radio that will knock your socks off. Be glad to answer any
question you might have.

There is only one "dumb" question, the one that
does not get asked. Don't believe me? Ask any
"good" teacher.

If you require a higher class of driver's license, such as the commercial drivers license, you *are* in fact tested on the workings of various parts of the automobile (air-brakes, hoses, pumps, doors, emergency windows etc etc).

It's rather like needing to know more about Ham Radio if you want to get a higher class of license.

Hi Mike:

You can't go wrong with that 450...it's a nice rig. I owned a 440 and an 850
for several years.

If you're going to buy one rig, however, and you like the idea of 2 and 6 meter
operation...you just can't beat the versatility of the 706

Yes, a hobby-until you and your station are required for service "In
the public interest, convenience and necessity" (Unquote Part 97, FCC
regs.)
At that point you cannot accurately predict what the mode of necessity
may be. You may not get to "choose" the mode, it may be dictated by
whatever mode is available to the station you find it necessary to
communicate to. If that mode happens to be CW, well,-----

>
> : Maybe I just don't think code is fun. But if someone has
> : > to think code is fun to advance in this hobby/service, it can damned well

> : > die as far as I'm concerned.

Many who "didn't think code is fun" have learned it and then after acquiring the license, abandoned it. Many others of the same opinion learned code, then found to their amazement that it was fun, after all. The rules say nothing about "forcing" you to use it if you don't want to. They just say you must go to the trouble of training yourself to use it. Enough hams do like it, once exposed, that there is always a adequate pool of skilled operators available. No one is, today, required to maintain code skills. That doesn't let you out of learning it, though. It is well known that it is the nature of humans, being "conservative" of their time and energy, to usually decline to voluntarily learn things that they don't plan to use, and see no point in, if they are not required to do it. Hence the requirement.

You just don't get it, CW is *one mode*, nothing more. But it *is* an important mode, enough so that it is important that it survive in ham radio for future use. That's enough for me. You obviouusly can't see this.

> And what do you mean that I have no communications concerns?
> What is that supposed to mean?

Perhaps I'm wrong, and perhaps this is the crux of the problem here. I consider the code, and it's licenseing requirement, to be of value to our communications readiness, so I would naturally assume that you, in your zeal to rid yourself of it, to be lacking in communications concerns. You consider code to be without value, and so see it otherwise.

OK, you deserve whatever spectrum you can legally use, and so do I.
Can't we agree on that, if nothing more?
You are absolutely wrong to say we don't take it seriously. Exactly
the opposite is true, else I sure wouldn't be wasting my time on this
NG. I know that there is little or no chance I'll ever change the mind
of code-free advocates, but there are others reading here that must
receive a balanced fare, for the sake of accuracy and the future of the
hobby/service.

> Unfortunately, all I've been able to do

Perhaps not. Perhaps if some of you guys would develop some of the
advanced digital systems you seem to believe we urgently need to
experiement with, others would find enough curiousity to join the
testing. It's a subject that seems to be avoided here beyond vauge
references. You'd be surprised how many code advocates are interested in
and use the advanced digital modes too.

> I don't think we need an "official" outlook to prove something so obvious.
> Go out into the real world and ask anyone who's *seriously* into wireless
> communications how useful something like CW is.

Let's clear up one thing right now. It's no secret what is going on in
the communications world, none whatsoever. CW is totally useless to any
advanced communications person, at whatever level-except as a possible
temporary substitute during failures. But get it into your head-- That
is *not* ham radio! Ham radio still has a very active place for CW
skills, and will have for the foreseeable future! It has nothing whateve
to do with the advanced modes or wireless telecom or anything else
except ham radio.

They'll likely ROFL. Ask
> an RF engineer and you're likely to trigger a laughter-induced heart
> attack. Ditto goes for a lot of new hams. The last guy I helped get his

> technician no-code license thinks mandatory CW testing is just completely
> ridiculous. Hams really aren't taken very seriously by serious people.

Well I'm a "Serious person" and I take hams seriously.(at least some
of them). The people who don't are those who don't understand that ham
radio is a much more widely divergent and allencompassing communications
service than any of the other services. No other has a charter nearly as
broad. We have room for *everything* communications related, where all
others have much more narrowly focused goals. The goal in ham radio is
Communications - however it can be done.
Who expects a RF engineer to be working on new CW systems? Or have any
professional interest in CW? It'd be ridiculous, of course. But as hams,
many engineers are CW enthusiasts. Those who are not, simply see it as
"outmoded" and that is that. Too bad they have such a narrow view of the
field of communications that one mode is totally discarded, regardless.

You go ahead and respect experimenting, I'll respect total
communications capability. As I said,something for all.

> I don't even know why I argue about this anymore. Eventually, the numbers

> so long as our world keeps advancing as quickly as it is.

I don't disagree with this, but CW is not nearly as far gone as the
no-code camp would have the world believe, in fact it is enjoying a
strong resurgance of popularity-with hams, of course. No one is
advocating standing in the way of progress, just don't FORCE "progress"
in the form of dumping code.

I work around
> very "high-tech" wireless communications devices and like to keep an eye

Yeah, technology has away of doing that, doesn't it?

Sorry if what I'm
> saying strikes that setimental nerve of yours, but it's true. Ham radio
> isn't what it used to be, yet at the same time it isn't quite what it
> should be by now.

Sorry, sentiment and utility are different things. You can say -and
believe- that it is sentiment but I know differently. I agree that ham
radio is changing, it always has been. The difference of opinion is
clearly in the details.(Isn't that where the Devil is always found?)

Well, I need to find either an upgrade for HamWindows 2.01(ick... crashes all the time and is S L O W) or a program to replace it. HW is having problems, and something needs to be done. What I need is either someone who will sell a later version of it cheap, or find a replacement that will control an R-5000, has the shortwave database and tuning controls that will work with JUST a mouse/trackball(no keyboard on this machine normally), and will run on a 386(very small HD, I don't remember how much RAM) with Windows 3.1.

I won't argue facts here. There seem to be few to argue, anyway. Belief is led by fear. The question I want to ask is what can *I* do to add to the hobby, to learn and enjoy building, experimenting, and operating, and share the fun without unneccesarily cramping anyone else's style. There is room here for all of us, and more to come. Let's calm down, 'sober' up, and get back to productive discussion. The threads I've seen since I began reading this group again two months ago remind me of a couple of kilowatters aiming their beams at each other two blocks apart. I hate to even suggest the idea of more regulation, but perhaps this group could benefit from being moderated. Just my two cents (G'wan, buy a piece of gum :))

I'm considering one of the above for HAM radio use. Since both have wide band receive capabilities, I'm also interested in their scanning capabilities. Can anyone enlighten me as to scanning speed, ability to group channels, channel lockout capabilities, types of scanning (by freq range, group or groups, CTCSS, etc), capture active frequency, etc.

I'm looking for a pair of lo-bandsplit vhf (138-150.8 mhz) G.E. Mastr II mobiles for a repeater project. Second and third last digits of model number are 56 which denotes this bandsplit (atleast on US versions....not sure on Canuck ones). Would prefer to buy Canadian to stay away from that nasty old exchange-rate....but will surely consider all replies. Also needed is a compete service manual.

Tnx. 73 de Garnet, VE5ARC

Be careful who you lump together with "no-coders." Some of us are Extras
who want to see code testing abolished.

A person who is new to amateur radio is not turned off to the hobby because
they don't want to apply themselves or because they're lazy. They're turned
of because of an ancient hazing ritual that Ye Olde Farhtz cling to in light
of more modern technology that is commonplace.

536. Bandstop filter design?? I'm so CONFUSED!

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-04 00:00:00 UTC
From: electron78@aol.com
Message-ID: <19980204021600.VAA29822@ladder03.news.aol.com>
Source record: 179468

I would like to notch out an interfering frequency. I must use a series resonant bandpass filter to short the signal to ground (a parallel filter in-line would stop the signal, but would also cause a high VSWR at the notched-out frequency, which is undesirable in my application). My question is, since we are all taught that sending a signal down an open OR shorted line will cause almost infinite VSWR, how does this not occur with a series resonant bandstop filter attached to ground? Wouldn't most of the energy be reflected back toward its source (since it is at a totally mismatched impedance -- namely ZERO)? Yet all the books show this procedure as OK. Can anyone answer this question? This has me really BUGGED!

Thanks!

Mike

I love mine, but, it has been in the shop twice in 6 months. Speaker
rattle and a 'known' but not much explained problem with UHF to VHF
Cross-band Audio. (Oh yeah, the FSK22 decode kit doesn't quite fit
the way they say it does, but if you have some tape to keep it from
shorting out, it works) Although, It seems that since I got it back
from Yeasu America, the fan sounds like it is on its last legs......ah
Rod, the 1 year is up in August, right ----<grin>

And who else or is Carl more formitable than even we procoder
realize, more powerfull even than the FCC, since I can't see the FCC
taking any action to ban Morse code simply because I don't think they
want to either pick off the procoders or spend the effort to enforce
such a ban.

> case in point. i asked for opinions on the ft-8100r. bert was the only

I have an FT-8100R and did not see your post. It has or has had 4
problems:

1) Speaker rattle (even a new one did little to help)
2) The FSK-22 Decode kit requires a shoe horn and lots of insulation
tape to install (It really doesn't fit where it says it should the way
it says it should, but, you can make it work if you can keep it from
shorting out (use the tape). (Yeasu reps know and admit to this
problem)
3) The UHF to VHF cross band audio was non-existent and it had to go
back to Yeasu America for repair (Seems that it is a known problem,
also, so check it if you can before you buy a particular unit.) Works
GREAT after the fix, though.
4) Fan is on its last legs after only 6 months.

Now for the gripes:
You cannot use the DTMF keypad to program frequencies (the way you can
the FT-51R).
The print for the button function ID is impossible to read while
driving (gee, after all it is a mobile rig)
As is normal for a massive function radio without a keypad, keep the
manual VERY handy.
The DTMF does not have an xmit hold function so you have to manually
hold the ptt while dialing (two handed in the car is DANGEROUS.)
There is a mod to help this wandering around.
Dialling from memory is a multi-step operation that is not obvious
(again you cannot use the DTMF keypad to select memory #1 as you can
with the FT-51R HT)

PLUSes;
Has lots of creature features (but then I haven't used most of them -
like smart band scanning/programming when in a new city)
Works great with both one-way and two-way crossband (once the audo is
fixed)
Hmmmm Other than that I guess I just like it, for no good reason.
Yes, I would buy it again.

The ADMS-2D software is GREAT (purchased separately) and it even takes the import data directly from the ADMS-1C and D if you have an FT-x1R, or FT-x0 series. (x=1, 4, or 5)

yourself.

You're not "showing" because you cannot. You have no proof to back up your
allegations. This is because I have never stated that I personally operate on

the freeband. If you disagree, prove it. Reference me where I have stated this. Put up or shut up.

The above may be true for CW vs Voice, but not at all
the case for packet, rtty, amtor, pactor, etc. The above again
is the clinging to the myth that CW gets through when other modes
don't.

>I have. AND no i dont think that
>you should be put through the training just to learn a useless thing,
>I think that if you want it (an HF license) you will learn CW. =

If anyone wants an HF license they will need o lern CW. That
is true today. That is something we are working towards changing.
There is no reason to mandate CW skill as a separate test requirement
anymore...except for the ITU requirement which today could be
satisfied with a 1 wpm test.

Well, this is a free-market society. Let's eliminate the outdated requirement and see what happens. If Morse is as essential as it's supporters claim...and as "fun" as they claim...it will surely survive without a government mandate...right?

From: News <news@goodfellow.org>
Message-ID: <6b8s8p$44i$1@usenet40.supernews.com>
Source record: 179480

FOR IMMEDIATE RELEASE February 4, 1998

Goodfellows Net on
3901 kHz, nightly.

FCC OFFICIAL AND BETTER AMATEUR RADIO FEDERATION
OFFICIAL MAINTAIN AFFILIATION VIA
AMATEUR RADIO AND THE TELEPHONE

A FCC official and a Better Amateur Radio Federation official are exchanging information via amateur radio and the telephone.
William C. Houston, WD4LUQ, a Federal Communications Commission official assigned to the FCC's Powder Springs, Ga., office and James V. O'brien III, KD4CDB, chief of enforcement for the highly controversial Better Amateur Radio Federation, have been observed on several occasions conversing with each other on amateur radio repeaters owned by Houston.
O'brien is a high profile figure in the B.A.R.F's malicious interference campaign to drive amateur radio public service nets off the air. He is also a convicted felon, according to information supplied by the clerk of the court in Paulding County, Ga.
Houston and O'brien were tape recorded in Atlanta, Ga., last month by a ham radio operator who monitored their conversation on the 444.700 mHz repeater. They were making arrangements to exchange information via the telephone.
"I hadn't spoke to you in a while. I need to speak with you on the telephone," Houston is heard saying on the tape. "I heard from our friend again and need to talk with you. My telephone is open. My number is...you can call me now," O'brien replied.
O'brien has made several on-the-air references to an informant. They are followed by long-winded diatribes, supposedly based on the informant's information, about a former FCC employee's labor relations with Compliance & Information Bureau managers and alleged FCC enforcement actions against public service nets, according to the same Atlanta, Ga., ham radio operator who taped the conversation between Houston and O'brien last month.
"I was a union official at the now deactivated FCC Powder Springs monitoring station, and I find it astonishing how O'brien is cognizant of so many lurid details of my labor relations with Compliance & Information Bureau managers, most

of which involved highly confidential labor negotiations. They were facts which only a FCC official would have access to," said George Arsics, W2ZB, who resigned from the FCC in 1996 and is now a corporate communications analyst in Atlanta, Ga.

"I understand O'brien has taken the facts he has obtained about me from this informant, added several obvious falsehoods, and from what I've heard, he has created some comical but very untrue stories about me. I have no idea why I am a subject of his fantasies," said Arsics.
"I do notice, however, that O'brien tends to focus his hatred towards successful professionals and authority figures. These include Dr. Donald Scott, K1IDF, a college professor; Dr. Charles Schwartzbard, AF2Y, a retired dental surgeon; and Mick Slater, N9PGE, a retired police officer," said Arsics.
"There is in fact a private sector concerted monitoring effort, involving several entities, going on right now to uncover ethical and other improprieties inside the FCC," said Arsics.
"The FCC's Powder Springs office does not operate in a vacuum. It is subject to the same regulations and laws as any other federal place of employment. For far too many years, far too many things have been ignored or swept under the carpet away from public scrutiny. I have read transcripts of amateur radio conversations which contain references to CAD software, eight foot copper ground rods, lightning arrestors, ham radio and electronic equipment repairs, and many other interesting topics. When pieced together, they tell an interesting story," said Arsics.
In a recording of a December 7, 1997 conversation between Houston and N4YDX on the 146.895 mHz repeater at 2:41 pm, N4YDX requests Houston to make repairs on a piece of radio equipment. "You can take it to work with you next week," says N4YDX. Whereupon, Houston informs N4YDX that he no longer does that sort of thing at work. "Oh, I do that at home now," replies Houston.
A request for a statement from Houston regarding the FCC's relationship with the Better Amateur Radio Federation and O'brien in particular went unanswered, according to Oris Grim, N3CND, who requested the information.
In a tape recording obtained from an Alabama source, Houston is heard on his repeaters describing numerous classified security details of the FCC investigation which solved the well-known Roanoke Phantom Air Controller case. He goes into detail, for the benefit of another ham operator, how the FCC utilized information and surveillance to identify and locate the perpetrator. (No excerpts from this recording are quoted here, due to the extremely sensitive nature of the

information.) The FCC utilized highly sensitive investigative techniques and sophisticated equipment in this 1993 case which identified and located a disturbed individual who was intentionally interfering with radio transmissions between passenger aircraft and air controllers in Roanoke, Va.

"The FCC had, and probably still has, some of the laxest internal security I have ever seen. FCC employees receive virtually no training in security awareness and protection of restricted and classified information. I saw sailors court-martialed for much less serious security violations than this Roanoke incident. What is even more appalling, FCC managers seem to never follow up and investigate their internal classified security leaks," said Arsics, who was a cryptologist and communications security expert in the U.S. Navy, prior to going to work for the FCC.

In a recent conversation on a repeater monitored and recorded by a Tennessee ham radio operator, Houston discusses a sophisticated piece of analytical equipment used in FCC investigations. "Oh yeah, we [FCC] have one of those... (withheld for security reasons)...low-powered devices...to test it," said Houston, during a conversation with WJ9J.

"During my FCC employment, I discussed the need for communications security training many times with my superiors. My suggestions were met with apathy every time," said Arsics.

When Houston placed an uncoordinated repeater on 146.895 mHz, a controversy erupted with the Southeast DX Association over control of the input frequency. The DX association had been using the frequency for several years for DX announcements, according to information from that organization.

"During routine monitoring operations at the now deactivated Powder Springs monitoring station, we would often intercept Houston arguing on the air with the Southeast DX Association over control of his uncoordinated repeater's input frequency. The transmissions were emanating from Houston's office, located next door to the Powder Springs monitoring station, during official duty hours while Houston was on the public payroll. Several internal security reports were made to FCC managers, but apparently nothing was ever done, because the transmissions, during duty hours, continued unabated for years," said a former FCC employee.

"To my knowledge the FCC has never given any frequency to Mr. Houston or any ham. For him to cause a stir [over his uncoordinated repeater] and claim a frequency is in poor taste. But as an FCC employee this should be a fireable offense, certainly in violation of FCC and ITU regulations," said Dave Thompson, K4JRB. "[a friend of Houston's] told a Southeast DX Club member that Mr. Houston did all of his

hamming from the FCC monitoring station."
"I recall this controversy. Houston kept harassing the Powder Springs monitoring staff to enforce some nonexistent FCC rules against the Southeast DX Association. However, we viewed the matter as a serious ethics problem for the FCC, one which Houston should have never created. To make matters even worse, Don Taylor, the former Powder Springs Engineer-in-Charge, turned a deaf ear to the entire controversy, preferring not to deal with it at all. This left the monitoring staff with no direction from FCC management and Houston continuing to demand some unjustified action from us against the Southeast DX Association. I think a senior monitoring staff member finally told Houston he had better extricate himself as gracefully as possible from the entire matter and stop demanding unjustified enforcement action from the monitoring staff at Powder Springs. I don't think Houston ever did follow this advice," said Arsics.
Repeater ownership, especially such a highly controversial repeater, by a FCC official and Houston's association with O'brien raise some serious ex parte questions, according to a legal source familiar with the situation.
Houston lists an official U.S. government E-mail address at the FCC in his Buckmaster data base information and was specifically asked if this was for official or personal use. No response was ever received from Houston concerning this matter either, according to Grim.
"A visit from the media or Billy Tauzin's staff might entice the FCC to comment on ethical and other improprieties," said one Cobb County, Ga. citizen at a recent local political meeting.
W.J. "Billy" Tauzin is chairman of the U.S. House subcommittee on Telecommunications, Trade, and Consumer Protection. His subcommittee exercises congressional oversight of the FCC.
O'brien's address in the FCC data base is not his current mailing address, according to Bryan Johnson, a citizen's band radio operator who has monitored O'brien's radio mischief for several years. A requirement that amateur radio operators keep the FCC informed of a current address where they can receive mail is clearly stipulated in part 97 of FCC rules and regulations.
Houston, who resides in Dallas, Ga., owns and operates a total of three repeaters in the Atlanta, Ga., area. Their output frequencies are 146.895, 224.880, and 444.700 mHz, according to information found on the internet.
O'brien, who resides in Acworth, Ga., was convicted on June 16, 1993 in the Superior Court of Paulding County, Ga., of three counts of violation of the Georgia Controlled

Substance Act, GA Code 16-13-30. He subsequently served time in prison, and his parole was completed in June of 1997. His case is assigned number 93-CR-000158, according to the county clerk of the court and public records.

What these clowns stubbornly refuse to admit is that a large number of us who are in favor of removal of the code requirements HAVE passed the code test.

The old "everyone in favor of codeless HF must be either a no-coder or a CB'er" train of thought was proven false a long time ago. Let's move on, shall we?

Best bet: find a good, use Bearcat 200XLT. These are very rugged, reliable,
sensitive, and easilly modifiable for full 800Mhz coverage. Should be able to
find one in nice shape for under $200, wall-wart and carrying case included.

I have this odd problem with interference on my Icom W32A radio on freqs. at and above 147.00MHz. I have tracked down the signal to a boradcast FM radio station. My question is, should I design a notch filter based on the broadcast stations freq. or use my IF freq for my radio to get the freq I need to design the notch filter for? If anyone else has had this problem, or just knows what I mean and knows the easiest solution please let me know. I REALLY like this radio and want to talk on quite a number of repeaters that are in this range near me. Anyone with any help either post it here, or please E-Mail me at the below address. Thanks...

Hi Michael,

You may be correct in your final assesment and the poker being hot.
Maybe the No Code Test folks know this is true and are in fact using the
numbers to their benifit. The truth of the matter is that nobody knows
for sure but it is going to be interesting to see the monster change
that occurs when the ten years are up.

Regards

<soapbox mode on>

While I tend to agree with some of this argument in some
circumstances, it strikes me as being similar to all the other
"politically-correct" crap we have to live with everyday in all other
areas of our lives....

A.> A woman takes a military academy to court, expecting rules to
change to suit her and allow her to enroll in same. She wins, then
fails and leaves. She is heralded as a hero to women everywhere...
men still suck and it is all their fault.

B.> Man with physical disability takes professional golfing to court
to get the rules changed to accomodate him. Claims the rules aren't
fair because they exclude him (would he get his own handicapped
parking space for his cart too?). It is called "progressive", and
able-bodied people are to blame because they can walk on a golf
course.

C.> Cellular Industry buys congress so laws against evil radio
receivers can be passed to cover up the fact that they screwed up in

defining their system in the first place. It is ushered in under the banner of PRIVACY, and radio enthusiasts are all criminals and perverts and cannot be trusted.

D.> A person is turned down for a job or college scholarship because someone found it necessary to give that position or honor to a person with fewer qualifications simply because of the color of his skin and the "law" required a quota be met. It is called "Affirmative Action", and the majority has to be made to pay because of something that happened a hundred years before you were born to someone you don't know by someone you are not even related to.

E.> Children of the Computer Age can't be bothered to learn Morse Code in order to qualify for an optional segment of a hobby/service activity. They claim rules must abolish the requirements that are too "hard" because they aren't relevant to them and shouldn't apply. The jury is still out on this one, of course...

People... we can't keep changing the rules just to suit the vocal minority. Most of the laws and rules were enacted for good reasons to begin with. Rules, especially, are usually enacted in the first place to exclude those who don't qualify or can't make the cut. This makes certain activities and institutions "special" because they require certain talents or efforts in order to participate.

It isn't unfair, it PROMOTES fairness because everyone is held to the same standard. If you can't cut it, go do something else somewhere else!

What is unfair is the special advantage people "demand" under the guise of "unalienable rights". What IS unfair is when the condition of your body/mind, your unwillingness to put in some effort or the color of your skin gives you "special" consideration in "optional" activities.

Is it unfair that Princeton University won't admit a person because he/she never finished second grade? Is it unfair that HRO won't give me a $2000 HF transceiver because I don't have a job and can't afford it? Is it unfair a blind person cannot get a pilot's license? Hey, that's life and it isn't always fair.... get used to it!

I think it is all the lawyer's fault! If they wouldn't take these dumb illogical cases these things wouldn't happen and everyone wouldn't come to expect it in every other facet of our lives!

IMHO

I didn't see this posted on the newsgroups, but it was in my e-mail from
Mr. Oyen. I normally would have trashed it, but this guy is more of an
idiot than I thought.

Eric Oyen <n7zzt@psn.net> says,

>Rigley L. Case wrote:
>>
>> SHEESH! Someone made a post about CBRAMBO having a credibility problem
>> because he uses a alias. Yet we're supposed to believe you when you can't
>> even write a sentence past a sixth grade level! Never mind that the people

>> in question.
>>
>Are you a qualified school teacher?

I didn't know I had to be a teacher in order to have an opinion about posts
that do not make one iota of sense.

>In case you didn't realize it, I am only human (and prone to the same
>mistakes you are) I don't present myself as anything more or less than
>what I am. Until Mr. CBRambo made an appearance, the subject was
>relatively relevant.

I never said that I never make any mistakes. But I at least make an
attempt at proofreading something before I post it.

>Also, with reference to your quip about my education level, you are
>somewhat incorrect. Typing errors can be caused by a number of problems
>entirely unrelated to educational attainment. Several of the conditions
>that may account for this are as follows: cerebral-motor dysfunction (as
>noted in many cases of Cerebral Palsy or brain damage from
>accidents/injuries), Neuromuscular dysfunctional disorders, Learning
>disabilities (like dyslexia or disnomia), visual disabilities (including
>the legal definition of blindness) or even possible side effects from
>prescription medications used to treat a variaety of illnesses..
>
>You made an assumption (and therefore made an ASS out of you (U) and
>ME).

No, the only ASS around here is *you*

>also, if I ONLY had a "6th grade education" then how do you explain that
>I was able to nearly ace (aquire a score of nearly 100%) on the required
>tests back in 1992? As I remeber, some of those questions were very
>technical in nature and required more than just a cursory knowledge of
>math and general amateur radio regs and practices. So, it seems to me

>that a 6th grade education would not cut it entirely (I will admit there
>are some hams out there that are currently in the 6th grade, but they
>tend to be the exceptions, not the rule).
>
>Consider all of the above the next time you decide to take it upon
>yourself to critique someones educational level or use of grammer.

I made no mention of your educational level. I said that you can't write
a sentence past a sixth grade level, because at that level you'd know
the difference between "peace" and "piece" (as in speaking your "piece"
about something) and you wouldn't continue to misspell "grammar".
These are *not* overlooked typos due to some neurological disorder. These
are just plain stupid mistakes.

>
>now back to the subject of amateur related topics....
>
>Is CBRambo a ham?
>I really don't know. He has made statements in other posting indicating

>events.
>
>I would say I have demonstrated that I have worth, value and skills. I
>am presented, as is, faults included. If you don't like it, there is
>always the killfilter.

I'm not buying the "Enlightenment after the fact" routine. I call them
as I see them. If you are what you say you are, you should have higher
standards than the rest of us, and you wouldn't be using your disability
as an excuse.

...and that's MY opinion. Right or wrong.

Hi there,
Can anyone inform me if I'm able to buy on a market:
1. PCMCIA credit card any kind Packet Radio Modem?
2. PCMCIA credit card giving additional serial ports (COMs)?
Thank you for any information about a source & price.
Best 73 de George, SP2BRZ.

HELLO ? We already have codes. The coders want CW to be dropped
for HF access.

>True, CW has no REAL everyday use, but in an emergency, where
>communications NEEDS to be ONE HUNDRED PERCENT, nothing beats CW.

really ? read this:

[Quote begin]

For Montreal area ice storm, if you had only CW transmitters and
keyers, you were deadend.

why ? power was down. batteries (vehicles) couldn't be recharged
(ie. very expensive fuels or else gas stations were down because
electricity was down). What the worst ? Antenna was down
(because of the heavy ices. most of beam antennas (especially for
HF... long beam antennas) simply collapsed. You saw tons of beam
antennas bent down more than 30 degrees angle. Simple wire antennas
couldn't be used because of ices sticking to the wire which reduced
tremendous amount of signals going out and coming in.) IN REAL
EMERGENCY like this, having an 2m HT (Ladies and gentlemen, it's a
voice system. VOICE SYSTEM !!!!!) does a lot better than having
CW stuffs in your shack. Many repeaters were backed up with
generators and so forth (at hospital etc) and having an HT was worth
while... CW -> NOTHING !!

Think once. Think twice. Before you say CW is very useful for
emergency, think of real emergency. Think of ice storm. Think of
earthquake. Everything will go down.. including power, antenna,
batteries (vehicles). Don't even think of sitting down in your
shack during the winter when your shack is below -15 degrees celcius
or 5 degrees F (why ? electricity is down = heater is down). Don't
even think of sitting on your shack when all of your outside antennas
are down.

Think about it.

[Quote end]

we [FM] can thousands of miles by the satellite. hehehe... too bad.

>I worked VERY hard to get my Canadian Advanced (12WPM code) (gives me
>U.S. Amateur Extra class - well, acually more, but...)

Hi. I have Canadian Basic, Advanced and 5 WPM. I had to get this
minimum CW qualification since jerks [pro-CWers] would complain very
badly if I don't hold code. I also hold Commercial
Aeronautical, Land and Maritime license by the way. They were
too easy (especially CW). At least they didn't kick my ass out.
I passed all of them with one time shot. I will soon
complete 12 WPM (12 WPM is too easy, but I don't have time since I
spend most of time for studying. I will do it in next summer
break...) and will make efforts to remove this non-sense idiotic CW
requirement for those who want to operate on HF bands.

>CW. How many emergencies will be handled only by CW in the near future 1 in
>a 1000.

Did my definition mention the word "emergency"? I don't think so. Most
emergency traffic is handled by local VHF communications, which are
predominently FM. The United States has not seen a disaster with
regional or national proportions in its history, thus is unlikely to
need CW, the second most popular HF mode (and the mode which will "get
through" when voice fails.

My father-in-law is a big Navy MARS traffic handler. I can recall when
dating my wife I would listen to him operate on an HF voice net early
evenings. Sometimes it would take 2 or 3 times repeating a message to
pass traffic from PA to RI. Static crashers, poor propagation, etc., all
made it difficult for him to copy traffic. Often messages would be
repeated several times, portions spelled phonetically, or sometimes even
relayed from one station to another.

>>2) It is the most popular of all "digital" modes.
>
>Using the ARRL survey as stated before 72% said they use it "rarely or
>Never"

27% is still more use than any of the other "digital" modes.

Theoretically the code test is supposed to have a sending and receiving component. If implemented correctly, this test could test your operational ability. However, it would have to be structured correctly. It is unlikely it will be, however, because having a practical/operational examination requires closer personal attention to each examinee, unlike the "stamp-em through" processing we have now.

>>4) It is in the government's interest to promote a common mode of

You speak ATV, I speak RTTY. If we both speak CW, we share a common mode of communication, even if we otherwise don't operate anything else other than ATV/RTTY.

>>5) One purpose of amateur radio is to promote international goodwill. You

>as a test requirement.

I've made dozens of contacts outside the US which would otherwise be difficult (not impossible, but difficult) to make via voice. I have a New Zealand contact via CW. I have a contact in South Africa. I have another in Russia. Yeah, sometimes I can hear Russians on SSB voice, but almost never. I've *never* heard an African station on SSB, and I've never heard an Austrailian/NZ station on voice. Can't get there from here, so to speak.

>>6) CW is used in many "experimental" aspects of the hobby, including

A shortwave receiver makes a nice project for someone interested in SWL.
For a ham it is only 1/2 of the station he needs to get on the air and
operate.

>>Nobody is "forcing" you to do anything Dwight. I don't see an guy in a

>Treaty and U.S Amateur regulations with definite penalities prescribed by
>law for violations there of. So don't insult my intelligence by stating that
>no one is forcing me to learn Morse code in order to gain access to
>pubically allocated frequencies.

First off, the amateur bands are not "public" frequencies. They are owned
by the Government.

Amateur radio is a voluntary pursuit. If you don't like the requirements,
don't pursue it. I didn't like the fact that I got airsick whenever I
tried to learn to fly a plane, so I stopped. The FAA didn't hold a gun
to my head and force me to "earn" my license, nor did they force me to stop.
It was a voluntary choice I made.

>Someone must be using these modes my other computer is steadily displaying
>large volumes of traffic at all hours of the day and night from packet to
>sattellite.

Is someone sitting at the other end, or is it just two computers talking
back and force. Boy, that's interesting.

>The survey was not about other modes it was specific to the
>issue of Morse Code.

I don't seem to recall this specific issue was directed at morse code.
The survey asked how often you use various modes. SSB and FM were the
two leaders, with numbers greater than 50% (FM I believe was around 75%,
again, not surprising since many people are limited to operating while
in the car...) Morse was 27%.

>I have heard these surveys used to jusify keeping the
>code by the ARRL and the other procoders. The problem is you can't discount
>one part of the survey just because you don't like it and use the responses
>you do to justify keeping the requirements.

Okay then, in that case, didn't this same survey claim that 54% of those
surveyed supported retention of the code test element.

My issue isn't with the survey. its with the instrument. The instrument is
vague. That means the answers are inaccurate or misleading.

>Showing that an individual has the ability to learn morse code does not
>indicate how much technical knowldge or expertise that person has or is it
>indicative of what they are capable of learning.

Partially true. Morse code is not an indicator of technical ability. It
is, however, an indicator of expertise in the operation of CW.

>Few operators enter Amateur
>Radio with all the knowledge they need to be good operators but that is why
>the service was created and to make statements like you did about buying an
>HT and waiting 3 days to get your liscense is doing many fellow Amateurs a
>great diservice merely because they have more to learn about our great
>Hobby.

Did my comment hit a little close to home? I'm sorry if it insults
you, but its true. *The* major problem I see in amateur radio today isn't
a lack of technical knowledge, a lack of code, a lack of operating
principles -- its a lack of *elmers*. Nobody goes through the
elmering process anymore (because the No-Code Agenda labels an elmer
as a "Ye Old Fartz" since most elmers are probably coded hams, although
not necessarily pro-code) -- instead, everyone expects INSTANT everything.
Just two years ago we were sitting here on this very same newsgroup
talking about the FCC's electronic filing capabilities, so you could
get your new license virtually overnight. There *IS* no elmering in
ham radio anymore, and its because people want "instant gratification" --
they don't want to wait, they don't want to take time and learn, all
they want to do is get on the radio and yack, and the rest they will
make up as they go along.

>By the way My name is not DWight

Absolutely correct! If you can't cut it, move on to something you can do.
All of the lame excuses for doing away with the cw requirement are nothing
more than a sorry attempt to cover up personal shortcomings...

574. Delaware QSO Party 2/7-9 !!

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-05 00:00:00 UTC
From: radio@copland.udel.edu
Message-ID: <6bdhd4$7a$1@copland.udel.edu>
Source record: 179256

In between the CW Sprint, the Olympics, and what-all, get on the
Delaware QSO Party this weekend.

From 1700Z Saturday 2/7 to 0500Z Sunday 2/8, and from 1300Z Sunday to
0100Z 2/9 Monday. Or, noon to midnight Saturday and 8 AM to 8 PM Sunday
EST.

ONE CLASS ONLY. Whatever power, mode, band, you name it, goes in
a single category. So do what you like. I'll be low power CW only,
for example.

Scoring is one point per phone QSO and two points per CW/RTTY/digital QSO,
PERIOD. Delaware stations work anyone, everyone else work Delaware only.

Exchange is signal report and QTH - state, province or DXCC country for
out of Delaware, or Delaware county - which includes -

New Castle
Kent
Sussex

Yep, three big counties. NO MULTIPLIERS AT ALL.

Logs go to Contest Chairman, FSARC
P.O. Box 1050
Newark, DE 19715

or e-mail to deqsoparty@fsarc.org

Any questions, feel free to contact me at n9gg@dxer.com, or at work at
800-644-4476.

We had a lot of fun last year and look forward to working you.

Go Delaware!!!

Bob N9GG (will be on as K3HRO)

I think what your trying to say is non-CW-challenged hams want to drop the Morse requirement. Am I right? Your sentence didn't make sense. Are you trying to convince us that this crusade your on is driven by coded hams? If I understand (interpreted your sentence) you correctly, sounds like your blowing smoke up my a$$. Its easy to manufacture "statistics" and "facts" to suit your own agenda isn't it.

You've just heard from a minimum of three replys to the original post that conflict with your statement. You may get lots of people to agree with you that CW isn't a requirement of vital communications , or that it won't save the world when the aliens come - myself included. You may find lots of General+ hams that don't use CW regularly after they upgraded - myself included. I still enjoy an occational CW contact (a few times a year), although I'll admit my copying speed isn't what it used to be. However, you might be surprised that many non-CW-challenged hams want the code to remain and here is why...

Consider the CW requirement a demonstration of dedication and respect for the hobby. I didn't bitch and moan about having to learn the code, I just did it. First I learned 8wpm, and years later 13wpm.

What makes you think you deserve an easy ticket to the HF bands (memorize the ansers as you put it)? If you can't work for it, you don't deserve it. Thats what its all about Bub. Wise up man!

First wrap ALL the input/output lines around a ferroid choke like the snap togather units radioshack sells. Odds are one or more of these are about perfect antennas. Also wrap ALL the power cords in the very same manner...

Once you have your 13 WPM, you will never forget the code, your speed may drop if not used, but you don't completely lose it. You could still hammer out an SOS if ever needed.
I hadn't had my HF station working for a while, but since getting in on this debate, I have decided to go for my 20 wpm, I grabbed the ARRL 15-22WPM tapes and have them in the car while driving, it only took a day of listening to get back into the swing. Hopefully I should be up to 20 wpm this month. With the recent talk of CW, about 10 other guys on our 2 meter repeater have been getting into it heavy, one just made his Extra, several are working on it like me and several No Code Techs are working toward the 5wpm and I think one just passed it.

Our club is working on putting together a couple of CW related electronic projects. The CW excitment is intense around here! Heheh.

See you on 80 meters!

On a repeater ???

Get off your ass and learn the code then you can get on HF.

Curtris .. N5HDQ .. http://wf.quik.com/n5hdq

p.s. What the hell is a Morning Repeater .. I know what a 2 meter or a 440

repeater is, but have never heard of a Morning Repeater

Well, at least this is a somewhat "new" argument; however it is incredibly absurd. It may be true that we don't want the bands crowded but not by the "modern" hams. Take this group for example, it seems as if most on here are "no-coders" who congregate to complain about how difficult they have it. I would assume this would be the same thing I would hear if you were allowed on my bands. THIS is what I don't want crowding my bands, we have enough of you already who HAVE sucked it up and passed the code. If you wanna use the bands, take some time out of your apparently "busy" day and learn it.. There should really be no argument here.

R.J. --AA8AO
P.S. -- By the way, I'm not a "fuddy-duddy". . . I'm quite young!!

I have the following 20 watt mobile radios for sale:
1-Standard mod# C890l01A, 1channel with 151.625 installed, new in box $100.
1-Standard mod#C890L12A, 12 channel with 8 freqs installed, new in box $150.
1-Standard mod#C890L12A, 12 channel with 8 freqs installed,used $125.
Also have 5@ Standard mod#C830L30 3 channel H.T. with drop chargers and
lots of extras. Need battery packs replaced. Have 151.625 installed, $350.
All of these radios are crystal controlled with seperate rec. and trans
crystals which make them perfect for use as repeaters. Have a 151.625 pager
with drop charger and activator. Will take $575.00 for all the above
equiptment.

>learn CPR, we'd save alot more lives than teaching them code.

Hi Mark - I think we all know that the amount of time one spends per day
studying for the license exam will eventually become the same amount of
time one will spend per day in the hobby (operating, building, exploring
new areas). If one doesn't have the time to study, then they apparently
won't have the time to operate. Best to find a new hobby.

Source record: 179295

I hope someone can help me with this!:
I've got a MASSIVE TVI problem with a "home theater" system upstairs in my house! No one in the neighborhood has any problem with my transmitting, and every other room in the house is interference-free.... But this damn system (TV, 5-disc CD changer/stereo tuner, VCR, satellite receiver, speakers) refuses to submit to two well-placed (I thought!) high-pass filters, an AC line noise box, a GREAT grounding system (which all other TV's in the house are hooked up to with no problem!) and a low-pass filter on my rig, right at the back of the radio itself!!! What do I have to DO to get this thing under control? Has anyone used toroid-type chokes with any success? ANY suggestions would be GREATLY appreciated!
I am running legal power, and actually very LOW power (only 15 watts or so most of the time) no amps, power mikes, or anything else of that nature. What have I done wrong? Poor me! :-)
Anyone know what to do?
Mike in MO.

609. Heathkit SB-310 and SB-401 on ebay

HeathKit SB-301 SSB Receiver. Case is in perfect condition, small scratch under RF Gain knob, small scratch on inside of
VFO dial and light scratch across the face of S-meter.
This unit worked perfect when boxed up 10 years ago, has
not been used since.

Heathkit SB-410 SSB Transmitter. Case and face in perfect condition, no scratches anywhere. This also worked perfect when boxed up and has not been used since. I have the manuals for both and the hook up cables for them.
Buyer Prepays and I will split shipping 50/50.
Thanks

I will concede that CW has some positive aspects under adverse conditions
but not enough to justify its continued use as a test requirement.
Lets get down to the real reason you and others are fighting to keep the
code test requirements. You know that if the code requirements are dropped
CW is not important enough or popular enough on its own for new operators to
invest the hours of study, that is required to become proficient in its use.
So in order to save Morse code, you are willing to force all Amateurs to
learn the code, whether they use it or not, after they upgrade.(72% of all
people surveyed by the ARRL stated they use Morse "RARELY" or "NEVER".) I
and others have never advocated eliminating Morse Code from Amateur Radio.
We are merely working to change the regulations regarding its use as a test
requirement and a filter to restrict access to the HF frequencies. If you
and others are confidant that Morse is so popular or has such a large
following, why are you opposing changes in the regulations? Surely it will
be able to survive as a viable mode on its own merits, if not it does not
deserve the special status it enjoys in Amateur Radio today.

What kind of power supply are you using, Mike? Is it a switcher? Is it on the same circuit as your entertainment system? What about your ground... Is it perchance near 1/4 wave? Try completely disconnecting your ground, swap the power supply out, try a different rig, etc.

Another divide and conquer technique would be to disconnect your antenna and cable feed from your entertainment gear and watching for interference, then maybe using indoor rabbit ears. Try also running it off an extension cord from another outlet. Ditto with your ham station. Disconnect various components starting with your VCR, a notorious culprit.

Sooner or later you will find the cause, then you can check out the cure... obviously one of the things you tried isn't working the way it should. You have thrown all the stock cures at the symptoms without finding the exact bug causing the problem. One of your cures was the right one but just didn't work for some reason. That's my intuitive from-a-really-major-distance guess.

Good luck, Mike.

>1. Fought and won the wars to preserve freedom (yours included)

We honor your service and respect the flag. We made the off-color
joke because of you calling us "cry babies" and your
stubborn-headedness.

>2. Elevated this nation to undreamed of heights of prosperity

I think it had more to do with Europe and Germany being totally
destroyed,, and our industrial base being super-sized to support the
war.

The industrial base and the market gave your generation the
opportunity to create more wealth. Basically, if you showed up for
work everyday in the fifties and could read, you enjoyed 40 years of
guaranteed employment.

I also find it interesting your generation whines about the greed of
the 80's when the DEPRESSION was caused by the same greedy
speculation.

>3. Sent mankind in outer space

This was an acheivement not accomplished by any other nation.
Our generation could go to Mars, if there is any funding. I know that
some of you think we are already there.

>4. Eradicated many of the world's dreaded diseases

Bad point. Virii and drug resistant bacteria will be with us forever.
Cures will be developed, or there will be no point in arguing about
the code.

>5. Established a highly efficient and safe food system

I think you will see even better improvements in the next 50 years.

You ever see that Parmelac milk with a shelf life of 2 years?

What did they do with that 20,000 tons of bad Burger King beef,
anyway?

>6. Brought mass media and education to all

Sorry you lose big on this one. What happened to the public education
system while your generation held the reins?

Allow me to introduce you to the internet, where you can generate your
own content instead of being programmed to buy Tide.

>7. Provided a standard of living next to none

This is a by-product of the rebuilding of Europe and Japan.

>8. Invented and produced scientific devices that would have been magic
>100 years ago

This is a silly point. It happens and its gonna keep happening in a
capitalistic society.

>9. Established a health and medical system for the benefit of mankind
>

HMO's and the pre-existing condition clause? Doctors selling AMWAY and
herbal nutrients in their offices? Linking survival to $$$
(insurance)-- get real! Giving monopoly power to the AMA?

> Why would I spend weeks studying an encoding scheme that I'll never use?

For the simple reason that it's allowed on every freq'y of every M/HF band. What ever freq'y you choose to operate on, you should be familiar with the modes that are permissible on that freq'y.

You're 80m fetish and comments thereof, are *identical* to those of
when you posted under the name of "Drew." I was the first to notice
the similarity. I'm parroting no one.

When you posted as "Drew" you were nightly drawn to the dork-nets on
80m, and then promptly came to us to tattle on them - day after day you
repeated word-for-word everything you had heard on the previous night
on 80m, to the folks on here. Then "Drew" disappeared and CB Bimbo pops
up, emulating the identical behaviour.

There are other clues which I shall not mention.

Source record: 179304

The real reason fuddy-duddy's insist on a morse code requirement is
that they don't want their bands any more crowded, least of all by
those who may just know a little more about modern radio technology
(and other modern things) than themselves.

At some point it is natural to be threatened by progress, especially
as it becomes more and more difficult to keep up with it.

So, I think rational arguments to the fuddy-duddies will fail, and
only patience will succeed.

When you hear a fuddy-duddy on the morning repeater drive,
ask him if he thinks the code can be dropped and the theory stiffened.
See what he says. (NO-people with more "smarts" will be on the air,)

Then ask him, how about we expand the cw only portions of HF (they
will have a great opportunity to use that code more) and then drop the
code requirement for the rest. (HELLLLLLLLLLLLLLL NO)

Then ask them, if it had to be one or other, which would it be?
(Warning- At this point, you will be put on the fuddy-duddy no-talk-to
list, you stupid whipper snapper)

Draw your own conclusions. Make your views known.

Yrac sez:
Good post, Mr. C. Actually, Yrac doesn't care as much about the subject as the posts imply. I had hoped to serve as a mirror so CB Rambo could see how he is coming across in his writing. Maybe I'm too sensitive, but I hate to see someone making a fool of himself in a world-wide medium!

Several folks in the NG seem to have personal knowledge of CB Rambo and indicate that he holds a license. And you know, the guy doesn't sound like a liar--just a troll.

Maybe there is something else at work, fueling his anger. I think back to what an Elmer/Mentor told me when I got my license. "Don't talk about races, or make cruelty jokes about people. You never know with whom you are speaking. They might be blind, or on crutches, or worse. But on the radio, we all are equals."

Of course, Elmer was right. I talked to one fellow for nearly 20 years before I learned he had been blind since birth. (No clue over the air). Glad I never made jokes about blind people!

All this came back to mind when reading Glen's post about having lost the dexterity in his hands during the Gulf war. I admire Glen for sharing this, and for not letting circumstances color his view of the world. A lot of people could not handle a thing like this with such determination to overcome difficulty, and with such a good attitude toward life.

Anyway, I've decided to cut Mr. Rambo some slack because I don't know his personal situation. Why he attacks everybody and everything associated with ham radio, I'll probably never know. It's his business, and unless he wants to share it, that's how it will stay.

Funny, isn't it. When a radio or computer breaks down, we all rush to the "rescue" with ideas on how to get it going again. But when a person breaks down, we tend to "throw them away." Maybe I've had my priorities upside-down on the CB Rambo situation.

So Mr. Rambo/Drew/Ham/CBer/Person, I'll drop this thread so we can get back to mods for Parker ball point pens, and whatever. Just remember two tidbits of reality: (1) There are some good and some not-so-good operators in both CB and Amateur radio. (2) Not every situation is either Black or White. Sometimes--often--there is a middle ground.

At 29 I am insulted by your insinuations about Fuddy Duddy operators.

I personally view the Morse Code as essential because

1) this ain't the military
2) this ain't commercial radio services
3) we aren't forced to do ham radio
4) it's a "least common denominator" as ANY radio can be used to
simply transmit a carrier. Modulate it by hand and you have CW.

I also would be very happy with a 5 wpm maximum speed test, which
would grant access to HF with the successful completion of progressively
more difficult written exams for upgraded privileges.

As a young, primarily-CW operator involved in computer stuff since
age 8, and educated in Electrical Engineering with an emphasis in
RF, communication systems, and signal processing, I am certainly
NOT afraid of technology.

I am also not afraid to remember how it is we got to this point.

New isn't always bad, and old isn't always good, but each CAN be.

CU on the bands! (or will we? who are you?)

>Lets get down to the real reason you and others are fighting to keep the
>code test requirements.

There are numerous reasons, not one single, solitary reason. For instance:

1) It will "get through" with contemporary voice modes (SSB/FM) fail.
2) It is the most popular of all "digital" modes.
3) It is an practical element to offset the theoretical (although I readily
admit it is imperfect the way it is implemented.)
4) It is in the government's interest to promote a common mode of
communication amoung hams, given the otherwise diverse number of
modes available to them.
5) One purpose of amateur radio is to promote international goodwill. You
will find in many instances communications is only available to
some countries via CW.
6) CW is used in many "experimental" aspects of the hobby, including
EME, microwave, and by people attempting to set long-distance
comm records.
7) A simple CW transmitter is an excellent entry-level builder's project
(decades ago people would get their novice license, and then
reenforce their book knowledge by building their first CW
transmitter while waiting for their license to arrive. Today, its
take the test, wait 3 days, and then call HRO and order your 2
meter radio. No reenforcement of knowledge.)

These are all I can think of at the moment (which, at 7am, I'm still not
awake :-))

>You know that if the code requirements are dropped
>CW is not important enough or popular enough on its own for new operators to
>invest the hours of study, that is required to become proficient in its use.

This is probably correct. People are like electricity. Given a choice, they
take the path of least resistance. CW is a mode that requires a great deal
of effort to become totally proficient at. For instance, why don't we see
a large number of people working satellite, packet, or ATV? Simple: those
modes require a greater level of resources; its easier to park your butt on
a 2 meter repeater and yack.

>So in order to save Morse code, you are willing to force all Amateurs to
>learn the code, whether they use it or not, after they upgrade.

Nobody is "forcing" you to do anything, Dwight. I don't see an guy in a black windbreaker with the letters "FCC" emblazoned in yellow across the back standing next to you holding a government-issue .45 to your head saying "study the code, or else!"

The requirement for a tech-class license is two theory exams. The requirement for an HF license are code exams plus theory exams. You know that. You made the choice to become a codeless tech when you got licensed. There is nothing wrong with being a codeless tech. It gives you privileges to 99% of all amateur spectrum.

>(72% of all
>people surveyed by the ARRL stated they use Morse "RARELY" or "NEVER".)

What is the definition of "rarely"?

I use CW "rarely" because most of my operating time is while I'm sitting in my car, and I'm not comfortable sending code while driving. Thus, my two choices are VHF FM, or HF SSB.

"Rarely" is an objective term, meaning many things to many people. For instance, you in your definition assume that people have all modes of operation available to them at all times, and they choose to operate morse almost never (rarely).

>I and others have never advocated eliminating Morse Code from Amateur Radio.

Your goals may be altruistic, Dwight, but I can't say the same of some of your counterparts.

>We are merely working to change the regulations regarding its use as a test
>requirement and a filter to restrict access to the HF frequencies. If you
>and others are confidant that Morse is so popular or has such a large
>following, why are you opposing changes in the regulations?

Removing the CW test element is nothing more than a continued "dumbing down" of amateur radio to the lowest common denominator of society. Over the past decade we have repeatedly dumbed down amateur radio, to the point that I hear "instant Extras" on the radio who can't even make a dipole or calculate the 1/2 wavelength length of a piece of coax for 441MHZ when the coax has a velocity factor of .75.

We've rewritten the Novice license for a 6th-grade
reading comprehension level. We've broken up the Element 3 into 3A and 3B to make it easier to study. We've published the question pools, so now all you have to do is use short-term memory and mnemonic word-association to "memorize" the question pools. We've made the code exams "multiple guess", so people who wouldn't even pass their 5wpm exam can take the 20wpm exam and "pass" if they happen to guess correctly on 7/10.

Sheesh, how much easier do you want it, Dwight? What are we supposed to do? Give licenses away in every box of Frosted Flakes?

I'm sorry, I don't support a continued reduction in our licensing standards.

The No-Code Agenda acknowledges that the theory examination process is broken, but in the next breath says "we'll fix that later, after we eliminate the code test".

History tells us that licensing requirements for an amateur radio license have *NEVER* been made more difficult, they have only been made easier. Thus, there is no reason to believe that ANY effort will be forthcoming to restructure the theory examinations.

What I say is very simple: Let's fix the theory exams *FIRST*, then we'll talk about the code examination. I am >not< opposed to elimination of the code exam, if a meaningful examination process is in place. To me personally that means a theory exam, and some form of practical or operational exam. (How the latter is done, I don't know, I'm open to suggestions.)

Strange. at the field day I brought my IC-735A for exactly the opposite
reason, it worked fine when other rigs gave out.

In 1985, when I was looking for a new rig in DL, at a big show. All the
major brands were available for listening (and inadvertent transmit).
IC-735 was the best of the bunch. Of course, there was some progress made
since 1985. Some IC-735 suffered from deterioration of PLL due to poor
contact in its trimmer capacitors. Then the receiver became noisy,
especially with strong nearby signals. This was mentioned in one of the
previous posts and fixes are described in the Icom site.

>
Mike,
I guess the first thing you need to do is determine WHERE the interference is coming from. AC Lines?? Antenna lines? Interconnect cables???

If it is possible to get an AC inverter strong enough to pull your entertainment system, try putting that on a 12 volt battery so you are completely isolated from any common wiring with your transmitter.

You may try putting your transmitter on a battery also.

Disconnect any antenna lead-in wires for your home entertainment system and see if that cures the problem with your transmitter getting in. (This will also cure the desired signal from getting in also but it will give you an idea of WHERE your problem is coming from).

The fact that NO other device, either neighbors or your own is having a problem tells me that your transmitter is likely clean.

It is possible that if you are using an external speaker, that the speaker wires are cut to a resonant length. If you have external speakers, try disconnecting one speaker wire at a time from the back of the amplifier. It is possible a speaker wire is acting as an antenna. If this is the case you can try replacing the speaker wire with a longer wire. Also, Radio Shack sells various snap on torroids. You might have to experiment a bit by wrapping turns around the torroid core to eliminate the problem.

It could be one of the interconnect cables going from one component to another. Try disconnecting one line at a time. Once you have found the offending cable, try different lengths, or coiling it up at the amplifier end to create some inductance, or perhaps some sort of torroid on it.
You will just have to experiment around once you have located the source.

Good luck.
Andy

I've gone into lurk mode due to having a life outside of these newsgroups, but I noticed something rather strange in the past week.

Please read the posts made by Rigley Case and CB Rambo. Note the similarities. It seems strange, but I get the impression they're both the same person posting from different accounts. Of course, it doesn't prove anything, but the similarities strange none the less.

Recall that that it's been over a month since anything has been posted by Amor Powers, who also claimed to hold a license, yet never posted a callsign. Isn't it funny how trolls and fakes disappear after awhile? They either get tired or they get caught.

I have a Kenwood V7 that has the mod already done. The question is this,Can or is it possible to crossband repeat or use the radio as a repeater when both bands are the same. i.e. 2mtrs-2mtrs or 70cm-70cm.

If anyone knows if this can be done please send me the if you will the information..

Thanks in advance

>
>1) It will "get through" with contemporary voice modes (SSB/FM) fail.

That has little if any validity in everyday communications. In an emergency there are numerous modes available that can equal or exceed the output of CW. How many emergencies will be handled only by CW in the near future 1 in a 1000.

>2) It is the most popular of all "digital" modes.

Using the ARRL survey as stated before 72% said they use it "rarely or Never" Semantics aside we both know that rarely means in this context (Almost never).

>3) It is an practical element to offset the theoretical (although I readily
> admit it is imperfect the way it is implemented.)

That is the understatment of the year. It is used and supported for one reason as a filter to restrict access to the HF bands. As a supplement to the theoretical it is a dismal failure. It is nothing more than a psychomotor skill and its use, does not contribute one iota to an operators technical expertise or knowledge, other than to prove he has good manual dexterity and the ability to recognise rythimic patterns.

>4) It is in the government's interest to promote a common mode of
> communication amoung hams, given the otherwise diverse number of
> modes available to them.

Try as I might I can not see how two individuals who do not speak the same language can use Q-codes to have an intelligent conversation other than location,RST and a couple of other simple concepts that may look good in your logbook but serves little if any purpose as a form of communication to pass complicated ideas or information.

>5) One purpose of amateur radio is to promote international goodwill. You
> will find in many instances communications is only available to

> some countries via CW.
I have many friends thruout the world and requlary recieve mail from them and it was all done using voice. If the individual doesn't have the capability to communicate other than CW, He may still do so after the code requirements are dropped. We are not trying to eliminate code merely its use as a test requirement.

>6) CW is used in many "experimental" aspects of the hobby, including
> EME, microwave, and by people attempting to set long-distance
> comm records.
Yes there is an article in QST this month to that effect, but I got a feeling it was an attempt by the ARRL to justify code to the operators above 30 MHz. We both know 90% of the code used there is Machine generated to take advantage of propagation factors that can quickly change at those frequencies.

>7) A simple CW transmitter is an excellent entry-level builder's project
> (decades ago people would get their novice license, and then
> reenforce their book knowledge by building their first CW
> transmitter while waiting for their license to arrive. Today, its

> meter radio. No reenforcement of knowledge.)

I built my first SW radio when I was a short wave listener and numerous other projects over the years. Should I have been required to learn Morse Code by the U.S goverment in order to motivate me to learn the skills necessary to build my first radio. If an individual wants to build his own equipment he doesn't need a knowledge of Morse code to motivate him. He will do it simply because "He wants to own and operate a piece of equipment he build."

reason you can force me to learn Morse code is to gain HF priveleges. It is
mandated by international and Domestic rules and requlations in the ITU
Treaty and U.S Amateur regulations with definite penalities prescribed by
law for violations there of. So don't insult my intelligence by stating that
no one is forcing me to learn Morse code in order to gain access to
pubically allocated frequencies.

Someone must be using these modes my other computer is steadily displaying
large volumes of traffic at all hours of the day and night from packet to
sattellite. The survey was not about other modes it was specific to the
issue of Morse Code. I have heard these surveys used to jusify keeping the
code by the ARRL and the other procoders. The problem is you can't discount
one part of the survey just because you don't like it and use the responses
you do to justify keeping the requirements.

>

Showing that an individual has the ability to learn morse code does not indicate how much technical knowldge or expertise that person has or is it indicative of what they are capable of learning. Few operators enter Amateur Radio with all the knowledge they need to be good operators but that is why the service was created and to make statements like you did about buying an HT and waiting 3 days to get your liscense is doing many fellow Amateurs a great diservice merely because they have more to learn about our great Hobby.

By the way My name is not DWight

Hi, dear OMs

A Hungarian group of DXpeditioners, members of the Hungarian Pannon DX Club will operate from Ulan-bator Mongolia in May 1998. The team includes HA0HW, HA4GDO, HA6NL, HA7SK and HA7VK. It is planned to keep 2-3 stations simultaneously on the air 24 hours a day, to maximize band openings. All HF bands will be activated, on SSB, CW, RTTY and SAT. The callsign will be announced later.

The DXpedition is supported by the Hungarian Ambassador in Mongolia, the Hungarian radioamateur Society and the "Radiotechnika" magazine.

The DXpedition team includes experienced DX operators. The members of the expedition already operated from Cambodia (XU0HW, XU95HA, XU7VK), Iraq (YI9SK,YI9VK) Liechenstein (HB0/HA0HW/p, HB0/HA4GDO/p, HB0/HA6NL/p etc), ITU Geneva (4U0ITU) and numerous Greek islands including SV5, SV8, SV9.

The announcements are available at the Web page of Pannon DXC at

http://www.dunanet.hu/pannondxc/

The QSL Manager has not been pointed out yet, however the QSL policy will be the following: The direct requests with adequate return postage will be answered direct. The requests received without postage or via the bureau will be answered 100% via the Hungarian QSL Bureau.

The DXpeditioners would gratefully accept contributions from both individuals and clubs or firms. Contributors should contact Laci, HA0HW at

ha0khw@c3.hu

644. S.F. Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-05 00:00:00 UTC
From: Keith Little <little@galileo.galilei.com>
Message-ID: <34DA1FBA.5E33@galileo.galilei.com>
Source record: 179331

Greetings,

I'm going to be motoring around the S.F. bay area in a couple of weeks,
and was wondering if anyone knew of a good 2M repeater to work, in case
I need directions, etc. I'll be going from S.F to Modesto.

Thanks a bunch,

Keith Little

645. Re: Baffled at TVI persistence! HELP!!!!

Mike,

I had the same problem with a VCR, and no amount of tweaking would fix it. The RF was leaking into the circuitry through the case (which was supposedly an RFI shield!). I finally had to buy a steel box for it and ground it to a cold water pipe.

I did have one TV however, that was picking the RF up through the power cable. A line noise box was useless (varistors won't help), but an isolation transformer fixed it (a VERY low pass filter). I'd put one on your transmitter as well -- but make sure everything's well grounded to cold water pipes...

Burton,

That's a good way, but there's a better one. Just Call the FCC's
National Call
Center at (888) 255-5322 and follow the directions. The touch tone
system will
tell you when your call comes through. It asks you for your zip code,
and date
of birth.

>There are numerous reasons, not one single, solitary reason. For instance:

>1) It will "get through" with contemporary voice modes (SSB/FM) fail.

True, however we have not one actual emergency example which
required such use.

>2) It is the most popular of all "digital" modes.

Yet it has NO place at all in any of the REAL emergency
preparedness activity of RACES and other day-to-day
emergency activity. In contrast, many emergency preparedness
efforts have very actively integrated other digital modes into
their plans.

>3) It is an practical element to offset the theoretical (although I readily
> admit it is imperfect the way it is implemented.)

Which means what?

>4) It is in the government's interest to promote a common mode of
> communication amoung hams, given the otherwise diverse number of
> modes available to them.

Just how does a ham in China who knows no English use CW
to serve as a common mode of communication.

>5) One purpose of amateur radio is to promote international goodwill. You
> will find in many instances communications is only available to
> some countries via CW.

Please, that is pure bunk and MD knows it. If it isn't, maybe
MD can tell us what countries can only be contacted via CW.

>6) CW is used in many "experimental" aspects of the hobby, including
> EME, microwave, and by people attempting to set long-distance
> comm records.

So what, these are all recreational aspects of ham radio and those
that wish to pursue those things can and will learn CW if it
improves their ability to do so.

>7) A simple CW transmitter is an excellent entry-level builder's project
> (decades ago people would get their novice license, and then
> reenforce their book knowledge by building their first CW
> transmitter while waiting for their license to arrive. Today, its
> take the test, wait 3 days, and then call HRO and order your 2
> meter radio. No reenforcement of knowledge.)

So what, this is a recreational aspects of ham radio and those
that wish to pursue home brew things can and will learn CW if it
improves their ability to do so.

>These are all I can think of at the moment (which, at 7am, I'm still not
>awake :-))

Well that explains it :-)

>Nobody is "forcing" you to do anything, Dwight. I don't see an guy in a
>black windbreaker with the letters "FCC" emblazoned in yellow across the
>back standing next to you holding a government-issue .45 to your head
>saying "study the code, or else!"

As long as a CW test is required for HF, then CW is a
forced requirement on anyone who desires HF ability. That is what we
wish to change. If MD knows of an alternative path to
HF access without knowing code he should please
elaborate.

>The requirement for a tech-class license is two theory exams. The requirement
>for an HF license are code exams plus theory exams. You know that. You made
>the choice to become a codeless tech when you got licensed. There is nothing
>wrong with being a codeless tech. It gives you privileges to 99% of all
>amateur spectrum.

All this is true, but it doesn't need to stay this way. That is
what MD and others don't want. Change is a part of
life and ham radio. The fact that CW testing exists
today is not any reason it must remain so in the future and
none of MD's reasons above or collectively serve as
compelling evidence of any need to retain CW testing.

>>(72% of all
>>people surveyed by the ARRL stated they use Morse "RARELY" or "NEVER".)

>What is the definition of "rarely"?

Try Websters. I suspect most people have a pretty
good idea of what that means even though there
may be gradiants of difference between two individual's
personal analysis if what rare is.

>I use CW "rarely" because most of my operating time is while I'm sitting in
>my car, and I'm not comfortable sending code while driving. Thus, my two
>choices are VHF FM, or HF SSB.
>"Rarely" is an objective term, meaning many things to many people. For
>instance, you in your definition assume that people have all modes of
>operation available to them at all times, and they choose to operate morse
>almost never (rarely).

If you or anyone else doesn't equip him/herself with CW
as a capability, that speaks volumes about how you see
it as less than important. You hype it as a be-all common
mode yet you don't champion its use in actual practice.

>>I and others have never advocated eliminating Morse Code from Amateur Radio.

>Your goals may be altruistic, Dwight, but I can't say the same of some of
>your counterparts.

Such as WHO? Some have belittled or put down
those that use code, but I have no recollection of anyone
wishing to end its use or otherwise eliminate it
as a legal mode for hams.

>>We are merely working to change the regulations regarding its use as a test
>>requirement and a filter to restrict access to the HF frequencies. If you
>>and others are confidant that Morse is so popular or has such a large
>>following, why are you opposing changes in the regulations?

>hear "instant Extras" on the radio who can't even make a dipole or calculate
>the 1/2 wavelength length of a piece of coax for 441MHZ when the coax has a
>velocity factor of .75.

Then how'd they pass the test? There are still questions that require
those calculations. Frankly, the fact that some people have a
photographic memory and may be able to memorize every question
is not at all indicative of the amateur population in general. I
suspect one can also find older hams who passed their test
decades ago and can't do those calcuations either.

>We've rewritten the Novice license for a 6th-grade
>reading comprehension level. We've broken up the Element 3 into 3A and 3B
>to make it easier to study. We've published the question pools, so now all
>you have to do is use short-term memory and mnemonic word-association to
>"memorize" the question pools.

Yet the total pool of questions for Novice and Tech is
over 900. Quite a feat for anyone to memorize.

>We've made the code exams "multiple guess",
>so people who wouldn't even pass their 5wpm exam can take the 20wpm exam
>and "pass" if they happen to guess correctly on 7/10.

The odds against that are considerable.

>Sheesh, how much easier do you want it, Dwight? What are we supposed to do?
>Give licenses away in every box of Frosted Flakes?

Not one person has suggested giving licenses away.
The point (and the only point in my opinion) is that test
requirements must be reviewed for reasonableness in light of
contemporary communications in genral and amateur radio
specifically. Clearly in neither case does one find any
absolute need for CW knowledge as a skill any more
than other subject areas BUT it is only the CW skill
test which continues as a separate pass/fail test
element.

Integrate the CW test questions into overall scoring and
you at least take CW off the separate hallowed pedestal
it now is on. Doing so would put the merits of learning
CW on a par with other subject areas.

>I'm sorry, I don't support a continued reduction in our licensing standards.
>The No-Code Agenda acknowledges that the theory examination process is
>broken, but in the next breath says "we'll fix that later, after we eliminate
>the code test".

It is being fixed already, but MD doesn't belive that increasing
the question pool size by 50% constitutes such as he has said
so before.

>History tells us that licensing requirements for an amateur radio license have
>*NEVER* been made more difficult, they have only been made easier. Thus, there
>is no reason to believe that ANY effort will be forthcoming to restructure the
>theory examinations.

Repeat my comments above.

>What I say is very simple: Let's fix the theory exams *FIRST*, then we'll
>talk about the code examination. I am >not< opposed to elimination of the
>code exam, if a meaningful examination process is in place. To me
>personally that means a theory exam,

So what should that be? What form...keeping in mind
the FOIA apparently requires published questin pools.

>and some form of practical or
>operational exam. (How the latter is done, I don't know,
>I'm open to suggestions.)

Well the CW test is in no way an operational test now, so
I haven't a clue as to what MD wants here. Hands on
testing (operational) has little or no place in most
licensing except where danger and safety are
involved (eg. pilots licenses, driver's licenses, etc.)

It won't, that's no different for voice or code. The point above was
made in light of those that CLAIM CW knowlege is akin to
a language unto itself. Clearly it isn't anything but an encoding
methodology and even the Q codes aren't understandable
on a universal basis unless one has a table to translate the
Q code into a meaning understandable in the language of the
person reading the coded message.

Oh! Like, we're supposed to automatically know that the person we're replying
to is a "pillar of the community."

The so-called "attack" was a simple statement of opinion as to how the
attitude of, "If you don't like the requirements, find another hobby,"
might be detrimental to the future of amateur radio.

IOW, what we have is basically code-test retention reason #13,451 which is,
"I did it, so by gum everyone else should have to do it!"

This attitude is the reason why the CW test is nothing more than a
government-mandated hazing ritual.

No. It doesn't make one iota of sense. Why should faster speeds of an
antiquated communication method be demonstrated in order to have access
to HF voice frequencies? One slow code test is enough for all classes.
It satisfies the ITU treaty completely.

In the current scheme, 5wpm is the entry level because a rank beginner can still count the dits and dahs and translate them into letters. At 5wpm you only need to have the code memorized, not learned.

At 13 wpm you can no longer count the dits and dahs and translate them; you have to be able to recognise the sound, but there is still time to think about what you heard.

At 20 wpm cw is automatic: here a sound, write a letter.

I think you can see the natural progression, and it makes sense. So lets make 20wpm required for advanced, and move the extra up to 25-30 wpm. Here, you begin to hear the shorter and more common word sounds, and common letter groups in the longer or less common words.

While I like my scheme better, I could agree with yours, although I think the 9wpm proposal is too low. How about 5 wpm increments?

Novice/ Tech Plus: 5 wpm
General: 10 wpm
Advanced: 15 wpm
Extra: 20 wpm

As a non ham trying to learn CW, I have found that CW is not easy to
use.

However, I really really want to learn CW,
1) because I have always wanted to.
2) Because I want to work qrp.

Also, learning CW places a certain entrance level of determination to the

people who want to be hams.

And its a common Language.

Its my non technical non ham opinion.

Chip

>
>you don't have electricity and you don't have any antennas. you
>don't have car batteries left and you don't have anything. how do
>you use your CW stuff anyway (or SSB or whatever... base station) ??

How do you use your VHF FM HT? How do you get into a repeater which isn't
on the air (no electricity)?

I, on the other hand, don't worry about such things. I have a generator.
I have a 30 gallon gas tank on my truck, which is kept full during the
winter. My wife's van has a 20 gal. gas tank. That's 50 gals of gas,
which will last a long time in my generator. Even if I run out, I have
plenty of nice neighbors with gas tanks, and I always have my siphon
pump handy.

naturally, M@S@, I don't expect you to think of any of this, because
its clear you lack the ability to improvise in emergency situations.
God forbid you should ever get stuck in the middle of nowhere with
just your HT, because you'll be sitting on a rock calling for help
through a local 2 meter repeater you can't reach. I doubt you'd ever
be of much help to emergency services, specifically because you lack
the ability to see the "big picture". All you can see is your HT on
your belt, and somehow you think that HT gives you superhuman
capabilities.

>That's what happened in Ice Storm '98 in Eastern North America.

Maybe its happened to you, but its never happened to me.

>read this:

Why bother. Its more useless drivel from someone without the capability
of improvising. As Mr. T. used to say: "I pity the fool!"

I agree with Hans... most decent stations (radios actually) set their SSB width at no more than 2.5, and more on the order of 2.3 or so. That should be a standard! :-)
(Then again, there ARE receivers, like RS's DX 394, and others, that have their RX filters at like 5 or even 6.8 !!!!!!!! Yikes!)
Stay as close to that 2.5 as you can!
My two cents-
Mike in MO.

Carson Valley Radio Club Sponsors Classes

The Carson Valley Radio Club will be sponsoring a nine-week Technician licensing class beginning Wednesday, March 4th, at the Minden/Tahoe (Douglas County) Airport, located between Minden and Carson City. Registrations will be accepted up to the second class meeting.

The class will be taught by experienced instructors Bob Grissom, KI7GN, Harry Hampton, N7MBO, and Dick Flanagan, W6OLD, and will culminate in a special VE testing session. This will be the fourth consecutive year this dedicated team has taught these successful classes.

The classes will be held every Wednesday evening from 6:30 to 9:30 p.m., at the Sierra Front Interagency Dispatch Center, 2311 Firebrand Road, Minden. All instruction will be free, with students required to provide only the text book, "Now You're Talking," 3rd Edition by ARRL, which will be available for sale at the meetings.

For more information, please contact Dick Flanagan, W6OLD, at (702) 267-4900, via e-mail at w6old@qsl.net, or visit the CVRC Web Site at http://www.qsl.net/w7di/.

Here's a question, Masa,

What CAN "YOU" DO exactly with VHF voice/digital modes (with no power, no antennas, no mobile batteries, no heat in the shack (winter time))??

What can YOU do, Masa?

If you don't have an antenna for your handie-talkie, what are YOU going to do? Build one? You didn't know the formula for calculating the length of a wire antenna for a particular frequency until people on this newsgroup told you (and you say you have the Canadian "Advanced license").

If you have no batteries, what are you going to run your HT on? How are you going to run your TNC?

With no heat in the shack, what are YOU going to do Masa? You didn't even know how to siphon gas from a car to run a generator, until someone on the newsgroup explained it to you.

> AND lucky enough... when you have CW, what are you going to do with it ?
>
> Pass an emergency traffic ?

Sounds like a good idea. It's done every day.

> What kind ?

What kind do you think?

> Order a bed ?

If a shelter needs beds, that kind of traffic may well be sent using CW.

> Sorry, it doesn't work.

Why is that, Masa?

Julian

We can grab our HT, put it in shirt pocket, go out to 7-eleven, buy AA
battery.
And we're on the air.

Can you do that?

How come you deleted the "Followup-To: rec.radio.amateur.policy" line,
Hans? You're a bad boy for wanting to perpetuate this thread on .misc.

Anyway, I *did* say "HF" in my first and last sentences.

Enjoy the weekend,
Jeff KH2PZ / KH6 (to keep Hans happy)

*
*...and that's MY opinion. Right or wrong.

Rigley, assuming you're someone who has all of their facilities about them, do you park in handicapped spaces and tell someone in a wheelchair that the reason you did it is because handicapped people should have higher standards?

All this coming from someone who wants amateur radio to have _lower_ standards.

I've been watching this code 'debate' for a while, and this is the first good idea that I've seen. When automatic transmission cars were not the norm, there was a restriction in the drivers' drivers permit that stated that said driver must be using a car with automatic transmission if he/she had not demonstrated the necessary skills with clutch and shifter.
I propose the same type of restriction on no-code HF rigs.
Those without the required code skills could use the HF band, but would be restricted to a small portion of the freq., much like the novice class is restricted in its accesses to the bands.
Fair enough?

This is not a " scheme ", it's a simple offer.

I've been cooking and baking for nearly 45 years. Here's a chance for you to benefit from my experiences. For only $2 (US), I'll share 12 of my favorite recipes with you. These are really exceptional and ,as far as I know , have never been published previously. Many were handed down to me by my grandmother and I've adapted them to a lighter style of eating. Most of the recipes are proportional (can be doubled or tripled) making them naturals for entertaining, fraternities and sororities, firehouses, etc. From incredibly succulent chicken and beef dishes, to mouth watering desserts, this is an opportunity to get some really great recipes for very little money.
To receive your copy of "Karen's Best " recipes:
Send $2 in cash (concealed) and your E-Mail address to:

K.B.
22704 Ventura Blvd.
#334
Woodland Hills, CA 91364
USA

Your recipes will be E-Mailed to you the same day I receive your order.
Thanks. Eat well and enjoy.

Karen

I have a couple of questions.
Is there a group rec.radio.gripe.nocode>dev.null?
How do we get one set up?

Netscape Communicator has a nice filter for email. How can I
use it to filter newsgroups? My next button and delete key are
wearing out.

I just have to add my two cents.
Learn the code, don't learn the code, be a ham, be a CB, take
up basket weaving, I don't care, just don't keep telling me
about it! You're using up valuable bandwidth that could
be better used reading alt.binaries.pictures.use_your_imagination.

And one more cent:

No. Some people are looking for no-CW = voice communication. Allow
them for voice communications on all of HF bands. If someone wants
to use CW, ask them to get CW qualification so they can use CW.

That won't work. To read the newsgroup rec.radio.amateur.misc via email, send a note to: listserv@ucsd.edu and only write:
subscribe (or add) info-hams
and you'll be hooked up.

All the day's articles arrive in one huge email digest; to page from one article to the next, you have to use your space bar (a real pain because most folks on here don't edit out included comments).

MAKE SURE YOU SAVE THE WELCOME MESSAGE!!! It contains the instructions for unsubscribing.

Jeff KH2PZ

OK, so what? You could have saved yourself a lot of trouble by not typing in all that stuff.All you have to do is link to a bunch of other pages and steal their content by reference.

It's estimated that 99% of the community gets their first web-page by stealing someone else's and modifying
it. That's what I did too. Just copy someone's page, throw out the typically 90% bandwidth-wasting fluff
that has no information content and change some pointers.

Too bad the guy who copied yours didn't take advantage of the hierarchy to implement
multiple pages that could be loaded much faster as needed. When I copy it, I think I'll do that.

Bottom line: If you think it's a secret, don't post it to the world wide web. Be flattered that someone thought your page worthy of copying...and get over it.
Defaming poor Charles won't get you any sympathy.

You still don't get it, do you boy. I'd also like to comment that it is IMPOSSIBLE to learn the code in one day and pass the test IMPOSSIBLE. A statement like that only tells me that you don't know CW, you are extreamly arrogant, or a feaking genious - which I doubt.

Your proposal is more reasonable than abandoning CW all together. I wouldn't take this issue lightly though. The amount of band space would be an issue of debate. This approach should serve as a method to inspire licencees to study up and gain more access. As a result, the allocation should be small - like maybe 15 kHz, and on a limited number of bands.

You don't have to have the license to operate CW, you have to have CW to get a license. Its that way for a purpose. Pay your dues - then you can use which ever mode you wish.

I can send CW with a 9Volt battery, a transistor, and a couple of resistors...whats your point? For that matter I could buy a Marine battery and be on the air for hours. I could talk a hell of a lot farther than you could on your HT using a AA cell also.

705. Do I have the pattern correct?

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-06 00:00:00 UTC
From: blueis <blueis@sprintmail.com>
Message-ID: <6bgcnaedo1@newsfep3.sprintmail.com>
Source record: 179174

There seems to be a definite trend in the Amateur Radio Service and, more specifically, in Amateur licensing. Let me see if I tracked this trend correctly.

Observation #1 [Historical perspective]
Tests were administered by the FCC.

Novice tests could be administered by a General class licensee or higher. Novice licenses were valid for two years. No voice operating privileges. Upgrade or sell the equipment.

For voice operating privileges you needed:
HF: General theory and the 13 wpm code test [Gen lic]
VHF: General theory and the 5 wpm code test. [Tech lic]

The code test required *one minute of 100% copy* out of five minutes of CW test.]

Code test: five-letter code groups [letters/numbers in random order].

Observation #2
FCC gets out of testing --- Amateur license testing now accomplished by VE's.

Observation #3
Code test is changed -- that is, applicant must listen/copy CW in a QSO format and then answer 7 out of 10 questions pertaining to that QSO.
The odds of guessing 7 correct out of 10 is .35%!
[For the mathematically challenged this equates to 3-and-a-half people out of 1000 people taking the test.]

The odds of copying one minute of 100% correct code when you don't know code: 0% !

Observation #4
The FCC implements a "no code" license which allows voice operation -- although only on VHF frequencies.

Observation #5
There is a movement to eliminate CW (Morse code) as a prerequisite for an Amateur HF-authorized license.

Conclusion
#1 The licensing requirements for Amateur Radio are suffering from the LTS ripple effect. [LTS = Lower The Standards] A similar effect has surfaced in American education. We do not challenge our children to achieve more. Rather, to improve their chances for "success", we lower our expectations.

Questions raised by these observations
#1 Where (and when) does this downward spiral end?

#2 Let us *assume* that the no-code-test movement prevails.
a) What will the 'no-coder's" reaction be when the newest group to push for lower standards demands an end to incentive licensing? That is, *Novice theory - no code* test yields a license for any frequency, any mode, at any legal Amateur power.
[If you do not think another group will raise up to fill the void left be the no-coder's, you must be comatose or beset by a cranial perspective that does not allow you to see the sun.]

Good question. I don't think the new guys have to have sympathy
at all.... Just try to surpass all the current accomplishments.. But
just judging from their attitude about the code challenge that appears
to be quite unlikely. Mike K8MB

Yes, you have pretty much summed up what is going on.

>#1 Where (and when) does this downward spiral end?

When there is no more licensing requirements. Because, you realize, once
the code test is eliminated, someone will start complaining about theory
exams. Its going to happen. Its just a matter of time.

Yep, 15 KHZ should be plenty for the no coders. Many of them would belike that
girl who raised so much hell about not being able to attend that all
male Military School back East. When she finally got in she washed out the
first week.

If no coders got an HF license I doubt that many of them, when they find
out that their rubber duckie wont get them on HF will say .. hell, I am not
going to work all that hard to put up an antenna, to hell with it.

I think most no coders don't really want to operate HF, they just want to
bitch
about being denied a license because they don't know the code. Some of them
almost seem to think someone is violating their rights .. !Curtis .. N5HDQ ..

717. Touch Lamps

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-06 00:00:00 UTC
From: Harry Howell <hairman@cco.net>
Message-ID: <6bgs7b$10a$1@usenet87.supernews.com>
Source record: 179186

Hi,

I have a half dozen touch lamps. They are real nice for people with manual dexterity issues. I mention this ... because when i bring up touch lamps and ham radio conflicts, i usually get amusing comments describing creative and amusing ways to dispose of said touch lamps. The needs of my household would best be met if we could find a way for touch lamps and hamradio to coexist under the same roof. The touch lamps have a tendency to cycle though the three levels of brightness, and off positions when the ham station is operating. I read somewhere about a very simple coil and capacitor circuit to remedy the situation. Now I can't find it. Has anyone who has dealt with the prementioned conflict, be willing to she some light on the situation.

Code is allowed on any freq'y on any HF band; it's the only mode
so privileged. And I'm sure you'll agree that no matter what freq'y
you choose to operate, you should be familiar with any mode privileged
to use that same freq'y. Thus, it only makes sense that to operate
anywhere on HF, you should be proficient in code.

Please abide by the followup line (directed to .policy only),

Yes I would say you have a pre 1960s radio..by almost 45 years. Charles A Freshman made a series of TRF, and Regen's that date back to the mid 20s. The earliest in my collection were made in 26. They were called Masterpiece. With good tubes and fresh batteries they were very nice radios. The infinite impedance detector on the TRFs fed a simple triode amplifier, usually a '17 or a '12, that drove a typically dreadful loudspeaker or an equally dreadful pair of high impedance headphones; usually 2Kilohms. However, when I connected my one of my Freshmans to a highquality loudspeaker, or an early pair of 2K Sennheiser 414 headphones, the audio was astonishingly clean and smooth. This was before NRSC II decided that AM radio was not to be considered as a serious medium and took both the top and bottom off the bandwidth to accomodate C-Quam stereo, which is, by the way, the inferiour AM stereo system...but that is another debate entirely. Nonetheless, with good output devices, my Freshman rivaled the audio of the output of the modulation monitor at the station I was working at the time. This was verified by actual bench measurements, and live listening tests in studio.

Data on your radio is available through a number of sources. Rider publishes most of the Freshman series in "The Professional Troublshooter's Manual" series. (Now out of print, I believe, but found in many libraries in the Applied Science departments) and Sams in Indianapolis has a special division that handles Pre-'45 era equipment, most of it from Rider. They will send you copies purchased by the page. The cost is nominal, and the service is good.

Tubes are out there...If you have dead tubes, you can cut the bases off of them and make adapters for more easily found contemporary tubes. Just get a copy of a tube manual, (RCA published a very good one) and match the operating parameters. That will get you going. For original series tubes, check the newsgroups, they are always selling old and new old stock tubes. Fair Radio in Ohio sells them, and you can find them by the pound at hamfests, and occasionally at flea markets. (I bought 1500 old tubes at a flea market for $5.00 the lot, and have todate found only 15 duds. In the box were a half dozen "01s, '12s, '17s."

The only other pieces you need to worry about at the input condenser--not critical, and the resistor in the detector. That can easily be updated to a contemporary component, and since its below the chassis in teh box, it doesn't show. Or you can scrounge around for an original carbon filament in a glass

tube. That might be tough. The good news is that they are not always bad. And, if intact, might even be restorable--if you have the hands of a surgeon and the patience of Job.

Check the coils to make sure they are continuous, as they tend to open with age. If they are open, with patience, you can repair them.

That's about it. A good antenna and ground and a fresh set of batteries are about all you'll need to get it running...And batteries are available at your larger electronic supply stores....A few years ago I found box load of generic a/c powersupplies for this type of radio, complete with a choice of plug in connectors to accomodate the various manufacturers' products. They worked with the Freshmans just fine.

Value? Depends on your area...I bought the lot of mine for one $1. I have seen them for $60 a pop in reasonable condition. More if the original finish is intact. Somewhat less if it is a rough example.

Hope this helps. Enjoy.

p

The two statements above are logically equivalent. You gave a
conditional (If p, then q), and its contrapositive (If -q, then
-p). Construct a truth table connecting the two with the biconditional
operator, and you'll see you have a tautology.

Oh dang, I thought you were one of my Math 100 students. Disregard.

Q-signals, Z-codes, and a huge collection of prosigns called the Phillips Code. But use of these aren't limited to just CW; those two ops you mention could use the Qs, Zs, and Phillips on any mode.

Anyone know a site that contains the Z-codes? Haven't seen 'em since my military days back in the 70s.

That was NOT the original reason for requiring Morse Code, but the ONLY thing that can keep the Ham bands from being like the CB bands is by dropping the CALL SIGN requirement. It is the law of having to identify with your call sign every ten minutes that keeps people in line, as anyone can look up someone's call sign and find thier name and address.

When "Good Buddy" or the "Silver Fox" tell you to shove your radio up your ass on CB, it is harder to track them down.

Morse Code has nothing to do with filtering "undesirables" off of any bands. It is the anonymity of CB that makes it what it is, drop the Call Sign requirement on Ham radio, and it will be the same way.

A good example to prove this is that there is no Morse Code requirement on Ham bands 6 meters and above, yet those bands have not turned out to be just like CB! Dropping the Code requirement on the HF bands will not make them like the CB band either.

740. Attacking The Fuddy-Duddy Handbook

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-06 00:00:00 UTC
From: nospam@nospam.com
Message-ID: <34dfcdd4.9995338@nntp.a001.sprintmail.com>
Source record: 179209

All the responses to my previous posts have something in common:
not wanting to learn the code to gain a higher class of license and hf
privileges is

1) A personal short-coming
2) An unwillingness to learn
3) A desire to beat the system
4) Plain old whining.

These arguments are enumerated in Fuddy-Duddy Code of Rules and
Regulations, which is designed to shroud the real reason for imposing
a code requirement: keep the bands allocated to the higher license
classes more free and clear.

We propose a no-coder response.

CW is a skill--it does not take any creative thought. You dont have to
know how to add or read or spell. You dont have to ask yourself-is
this approach better or that approach better. Basically you don't
have to think. Any code transmission just depends on short term memory
ability and pattern recognition. As you get better, the process
becomes even more automatic. To masters of this skill, we afford the
best privileges. GO FIGURE!

On the other hand, learning about various radio topics such
distortion, propagation, bandwidth, microcircuits etc does require
analytical thought. You have to be able to choose solutions, know why
certain bands magically spring to life, figure out why your signal
does not get through. Just think: some kid could find interest in a
transistor instead learning code. Technical know-how is KNOWLEDGE, not
a skill. KNOWLEDGE will serve you far more than copying code at 10
wpm. Prove me wrong!

Therefore, would access to the higher classes by no-coders be
acceptable if the technical theory requirements were increased?

Now undoubtedly there will be some who don't know a Smith Chart from a
sheet of polar graph paper and don't care to learn because of

1) A personal short coming
2) An unwillingness to learn
3) A desire to beat the system
4) Plain Old Whining

Let them access the higher classes with a code requirement.

Ask your local fuddy-duddy. Let them know you are here.

Patience.

We dont buy that PC crap, either.

Why not increase technical knowledge requirements as a substitute for the code?

>What is unfair is the special advantage people "demand" under the
>guise of "unalienable rights". What IS unfair is when the condition
>of your body/mind, your unwillingness to put in some effort or the
>color of your skin gives you "special" consideration in "optional"
>activities.

I made no demands in my post. I merely asserted an opinion which stated the real reason the code requirement is supported. I also concluded it was best to resort to patience.

I hear another line from the fuddy-duddy handbook: we are just complainers, unwilling to learn.

>
>Is it unfair that Princeton University won't admit a person because
>he/she never finished second grade? Is it unfair that HRO won't give
>me a $2000 HF transceiver because I don't have a job and can't afford
>it? Is it unfair a blind person cannot get a pilot's license? Hey,
>that's life and it isn't always fair.... get used to it!

Nobody said the requirement was unfair. We just proposed a better requirement! Then we went on to explain why a certain group of hams is going to oppose it.

Cross-posted to: rec.radio.amateur.misc,uk.radio.amateur,rec.radio.amateur.equipment

In regards to my earlier question asking how to safely reverse the general coverage TX modification on a FT747GX, I would like to thank the following people for their responses:

DAVE N1PPP
Harry KB6CGGO
Richard G4BLT (nice to hear from you again)
David, N8DO
Tim, K8TJ
Alex G0RAH
Monty N5NVM
Chris G4MYB
Tim Hynde

To summarise, quoting Chris G4MYB

>You don't need to reconnect the wire.

>To get out of general coverage mode,

>1. Set frequency to 12345.6 kHz.

>2. Turn radio off, then on again.

>The GEN indication should have gone off, it's back to amateur-bands
>transmit only.

I have now confirmed that this modification works, thank you.

And quoting Monty N5NVM

>Yes. It's a loop of wire which emerges from the front panel and goes
>right back into the front panel. I think it's brown and toward the
>left side.

Does anyone know what this wire actually does?

>I don't think you even have to turn the rig off, just re-connect the
>wire and the "GEN" indicator goes off. This tells you the general
>coverage transmit is gone. You may need to reconnect the wire
>then turn the rig off and back on. But it's way easier to undo the
>mod than it is to do the mod in the first place.

>After this, if you try to transmit out of band, you get an "Error"
>on the LCD panel.

It was interesting to note, the number of people asking me why I wanted to reverse the modification in the first place. If I could qoute David, N8DO

"At least in the US, it is legal to own a radio capable of illegal transmission, as long as you don't transmit illegally."

I have always thought that in the UK, you were not allowed to own a transmitter that you are not licenced to use, as an interesting sideline the FT747GX
in its "legal" mode can transmit within the ham bands in 500Khz blocks for example the 40m band you could transmit between 7.0 - 7.5MHz although in the UK we are only allowed to TX between 7.0 -7.1 MHz.

On another note what is the position of a Class B user (using a HF rig with a transverter for VHF/UHF use?) in the UK?

Or even a SWL using it without a microphone to transmit with?

And for my final... I have obtained from the net a Apple Macintosh based Hypercard prgram which will allow you to control the FT747GX using the CAT system, if anyone who is interested in a copy of this software please let me know.

Let's not forget that, in Europe, most know at least 1 other language.
You would think that in this scenerio that the two operators in question
both know French AND German.

I always find it very amusing that the chicken little, the sky is falling
group seemingly forget that there are a lot more amateur operators,
collectively, outside the US than within its borders. They keep harping
on the demise of the ARS, as it pertains to the US, and NEVER, EVER take
into account the operators in other countries. I guess they are firm
believers in that old maxim...WHAT'S GOOD FOR US, IS GOOD FOR THEM...

I can easily shoot down this theory.

I can get on any frequency since I hold an Extra class license. I'll simply
call CQ in a specific way so that you'll know it's me, and it will be on
a given time, date, and frequency that is mutually agreeable. We can arrange
specifics in e-mail.

You don't even have to answer my CQ. Just listen for the way I call it when you
turn in.

Any takers?

???

No code international personnels and I myself hold code. We have
access to HF bands, but we see no reason why we have to have CW
requirement for those who wish to obtain HF access. I wasted my time
to learn CW which I would rarely use.

>Consider the CW requirement a demonstration of dedication and respect
>for the hobby. I didn't bitch and moan about having to learn the code,
>I just did it. First I learned 8wpm, and years later 13wpm.

We respect the hobby and that's why we want to drop the CW
requirement... before the amateur radio dies.
My friend said, "The technology in the amateur radio is too old." and
I had to agree.

>What makes you think you deserve an easy ticket to the HF bands
>(memorize the ansers as you put it)?

I memorized 26 letters and 10 numbers and some puntuations for CW
test. What a bull**** ?? I did it in one day. It was much easier
than memorizing 500 questions & answers.

> If you can't work for it, you
>don't deserve it.

that's why we are trying to change it.

In the past, the driver's license candidates had to show the ability
to drive manual car while they wanted to ride automatic. You are
saying that if you can't work for manual cars, you don't reserve
riding automatic cars... because one has to put his effort to drive
manual and... and... not to give easy access to driver's license by
allowing him automatic car for the road test. Think about for a
minute. It doesn't make any senses at all.

> Thats what its all about Bub. Wise up man!

you too. try to see what's going on in the world.

>through" when voice fails.

---

hello.

you don't have electricity and you don't have any antennas. you
don't have car batteries left and you don't have anything. how do
you use your CW stuff anyway (or SSB or whatever... base station) ??
That's what happened in Ice Storm '98 in Eastern North America.

read this:

[Quote begin]

For Montreal area ice storm, if you had only CW transmitters and
keyers, you were deadend.

why ? power was down. batteries (vehicles) couldn't be recharged
(ie. very expensive fuels or else gas stations were down because
electricity was down). What the worst ? Antenna was down
(because of the heavy ices. most of beam antennas (especially for
HF... long beam antennas) simply collapsed. You saw tons of beam
antennas bent down more than 30 degrees angle. Simple wire antennas
couldn't be used because of ices sticking to the wire which reduced
tremendous amount of signals going out and coming in.) IN REAL
EMERGENCY like this, having an 2m HT (Ladies and gentlemen, it's a
voice system. VOICE SYSTEM !!!!!) does a lot better than having

CW stuffs in your shack. Many repeaters were backed up with generators and so forth (at hospital etc) and having an HT was worth while... CW -> NOTHING !!

Think once. Think twice. Before you say CW is very useful for emergency, think of real emergency. Think of ice storm. Think of earthquake. Everything will go down.. including power, antenna, batteries (vehicles). Don't even think of sitting down in your shack during the winter when your shack is below -15 degrees celcius or 5 degrees F (why ? electricity is down = heater is down). Don't even think of sitting on your shack when all of your outside antennas are down.

Think about it.

OK. Tell us.

What does a CWer can do in emergency situation ??

What CAN "YOU" DO exactly with CW (with no power, no antennas, no
mobile batteries, no heat in the shack (winter time)) ??

AND lucky enough... when you have CW, what are you going to do with it
?

Pass an emergency traffic ? What kind ? Order a bed ? Sorry,
it doesn't work.

Please explain.

>classes more free and clear.
>

So your defense is to call all pro-code individuals "fuddy-duddies"? Love those sterotypes! Makes it seem that there is a group of white-haired old men who have a personal conspiracy against you. Sorry, Charlie, it just ain't so!

The code is required to obtain the license for HF. How simple can we make it? Anybody can buy a computer and get on the internet. Anyone can purchase a CB radio and get on HF--even work DX in the freeband. It takes DOING something to get the Amateur license!

So what is the sense of loss that is driving you to stretch the arguement and promote sterotypes? Your group keeps claiming strong support from those who already have learned the code, so what keeps you banging the No Code drum so hard? No, don't give me the part about having lofty ideals. Answer this one question: How would YOU personally benefit from having the code requirement dropped. Put your agenda on the table and let folks know where you're coming from!

Is Code a technical necessity? Not really. It helps to read code when identifying beacons and repeaters, or for VHF weak-signal work. And it's a lot of fun on HF, with decent conversations and no profanity.

Is Code a filter? You bet. It's not to keep particular individuals or groups out of the hobby. Nor is it to keep the HF frequencies "clear". Many folks feel that something valuable should be worth working for. We could change the requirement to having to stand in front of the radio club in your underwear and reciting the Amateur's Code from memory and it would accomplish the same purpose: If you wanted a ham license, this is what you would do.

You've got to want it BADLY ENOUGH to do a little something extra to get it. If you have physical limitations, waivers are available (although many Amateurs, like the late KD4BFF, came up through the ranks by learning the Code instead of riding on what would have been a legitimate waiver situation).

Fuddy-Duddy Handbook? What a childish outlook. Yeah, we give valuable operating frequencies to those who learn code. They wanted it enough to buckle down and do what was required. We've "dumbed down" almost everything else in America, even the CB radio service.

Pardon us if we ask you to do something to show you want the higher class ham license. Increasing the scope of the technical exam is not the answer--that would be more restrictive to many people, and it would not promote growth in the hobby. We proved that with the old Technician Class of license. Code makes a nice, friendly, easy-to-overcome filter. I'm sorry, but your arguements just don't hold up.

I regret to inform you that there are many areas in life where they won't "lower the bar" for you. I hope Amateur radio always will remain one of these.

>CW is a skill--it does not take any creative thought.
>To masters of this skill, we afford the
>best privileges. GO FIGURE!

Exactly what are the "best privileges"? HF is less than 4MHZ of spectrum.
VHF, without a code test, is 100+MHZ of spectrum. You can do all kinds of
things on VHF that you can't do on HF. "Best privileges?" Some define those
as access to the 2 meter band, which was a big point of contention when
the codeless tech license was created. And, codeless techs got access to
2 meters.

>Therefore, would access to the higher classes by no-coders be
>acceptable if the technical theory requirements were increased?

Yes. Correct the deficiencies in the theory testing process and then
we can work to eliminate code examinations.

>Orlando. What a coincidence.

Seems like a pretty easy puzzle to solve. Merely visit DejaNews and pick an old Spew posting which contains the callsign of the radio station he used to work at. Pick up the phone and call and ask to talk to "Spew". If they say "he isn't here", ask "can you tell me when I can call back to talk to him, I'm a really big fan of his?" They will either respond with something like "he will be in at 4" or "he doesn't work here anymore". Then you'll have your answer.

Good call. I hate to see people site "examples" that contradict their own goals... it just coulds the minds of the weak and undecided. There are some other topics similar to this that come close to being a doomsday scenario, in which ANY mode wouldn't work.

But, if you knew CW, and since no radios worked, you could open and shut blinds in a window and send morse code! :)

>EMail:G.Milligan@Sheffield.ac.uk

Greg, AFAIK it is perfectly legal to own a transmitter for which you do not have a license, else every person or company with a signal generator would be liable for prosecution! Note that in the Netherlands this was/is not the case, and you have to/had to have a license to own any transmitting equipment.

However using the transmitter for transmitting without an appropriate license invites an unlimited fine and up to 2 years in gaol (according the the WT act of 1949) - this is from memory.

Lame, Jeff, *really* lame! If we extend this argument to it's logical conclusion, then Morse should be even *more* important on VHF/UHF, since Morse is allowed on all those frequencies also, and in fact, the only exclusive CW segments are located in VHF band segments. Since we are not required to pass a Morse test to use CW exclusive segments at VHF, why are we..... aw, never mind......

Yes indeed!!. That is exactly what happened to CB. For the first 20+,
or so years of CB, use of your callsign was indeed required by law, but
of course those who intended to "do as they wished and to hell with
regulations" soon stopped using any callsigns in favor of "handles", and
the downward slide began, and still continues to this day. You seem to
think such slippage is not possible in ham radio simply because of the
rules. Dreamer!!!

Feb. 6, 1998 Zulu

At 0520z or so the first QSO's for KA4IST/KH5, Mark, on Palmyra
were made with a VK3 (Frank), KH7R (Ken) and KH7U on 20 meters.

Mark is still setting up and should be back on 20 meters around
0630z to 0700z on 14.195 Mhz. I don't know if he has a lowband
antenna up yet other than the 160 dipole that Chuck, N4BQW, left
behind. Conditions from my QTH weren't very good (barefoot).

Hopefully after tomorrow's sked we will have a better idea of
his ops and freqs schedule.

I will leave posting to Tony or whomever was appointed the job!

Thank you all!

Aloha, 73

Kimo Chun, KH7U.

Shoot. That's really going to screw-up the value of the Hubble Constant.
And to think all we hear about on the news is Monica Lewzinsky. ;-)

Even if you and Rigley aren't both the same person, there's one thing you both have in common and that's the fact that you're both a couple of frauds. No call signs, yet claims of being licensed hams. Plus all kinds of "legal" (<--read "cowardly") reasons for not posting any callsigns.

What Oscar Wilde said is appropriate for trolls, flamers and obnoxious anonymous posters; "It's amazing what a man will say when he's wearing mask."

I disagree. First, web access is as close as your nearest library (which will probably contain amateur radio-related books - bursting with answers to practically any radio-related question). Once one discovers the radio web pages, they'll know where to look when any future query plagues them.

Also, if one only has email access, all the answers to one's questions can be found via info@arrl.org, the ARRL email server.

I'll echo Mike's "Teach a man to fish..." sentiments.

Good Day;

Yes ! ! ! we do have the Drake 2880 Downconverters in stock.

We test them 100% before shipping.

Pricing is as follows:

$39 each or 3 for $100
Price includes Power Supply/ Inserter
and Shipping. Personal Checks are OK.
COD is an additional $5 per order.
All orders are shipped via Priority Mail.
(that way there is no long wait)
All orders are shipped the same day.
(unless there is an earthquake, Hamfair,
Sunday or such that would keep us
away from the Post Office).

e-mail orders are accepted. Sorry, No Plastic.
P.O. Box Address is OK.

We look forward to hearing from you.

I was amazed at the last wave of spam that Oris Grim,N3CND,and George Arsiccs,W2ZB falsely posted over the newsgroups before xmas last year. As you all know now they are at it again. I have attatched the reply I received from P.C. Chen after I forwarded the latest lie-filled post from these two ham radio anarchists. As you can see,P.C. Chen could care less what kind of activity originates from his server,slander,spam or criminal threats are ok by him. His total lack of responsibility as a server owner will now contribute to Oris Grim posting untrue idiotic spam to all the amateur groups,as he is successfully doing now. When this intensifies in the future as I am sure it will,you have P.C. Chen to thank. I wish the newsgroup administrators,the amateur radio community, and netizens all over the world good luck with these pathological lying sociopathic anarchists.

That's nice. Unless you are completely moronic, his newsgroup posting
has nothing to do with our service. In fact, he posted those articles
through his dialup account. Now get off the crack you've been smoking
and go bully someone more naive.

Err, in Rhode Island, if you want to hunt using a bow, you have to take a bow-hunter's safety class (even if you take the normal "hunter's safety class", you still have to take the bow class). You also have to demonstrate proficiency with a bow at a "bow test" which, if you fail, you effectively have to wait until next year to try again (since the proficiency tests are only offered 2 or 3 times over the course of 1 week out of the year.) Each year you have to "re-qualify".

Black powder has no specific requirement for proficiency testing, other than the basic safety class.

As a licensed radio amateur you are granted the permission to build and operate your own equipment, for this reason your expected to have some knowledge of radio albeit very basic knowledge it's better than none at all. What a wonderful privilege to have, to be able to design or build from a kit or scratch your own equipment and put it on the air. It's too bad many never bother to enjoy this facet of the hobby.

Tim

Because of the fact that the radios used for Ham Radio use a lot more power than consumer no-license products like Cordless Phones and toy walkie talkies, the chance is greater that these radios could in many ways go out of band or interfere with public service or aircraft bands and anyone using such equipment should know how to measure and check his equipment and understand HOW such a problem could happen, as to make sure to avoid it. Actually the RULES & REGULATIONS are what is MOST important when getting a license to use Ham Radio transmitters, the THEORY part is really not neccissary, but is at least usefull and helpfull. The Morse Code part is really only one of the many ways some choose to USE Ham Radio, and should not be singled out and made to be a requirement at all.

Not knowing how to use Morse Code will not cause you to interfere or improperly use your Ham Radio equipment.

You may make the same argument with Electronic THEORY to a point, but it actually could help you to operate within the legal restrictions better than if you didn't know it.

The RULES & REGULATIONS part IS neccissary, and I don't think anyone could really argue that this is not neccissary to know before you could be licensed.

You can just compare the above to getting an automobile driver's license. You must pass a written exam on RULES & REGULATIONS, However you are not tested on the THEORY of how a car works, although knowing how to put gas in it and read the fuel gauge is very helpfull. There is NO requirement however on how to pull your car with a Horse rather than use the modern technology of the Engine. (Similar to Morse Code on Ham Radio) There may be some that argue that "in an emergency" when your engine fails, knowing how to hitch up a Horse to pull you will get you to your destination when all else fails, but this is as silly as the "Morse Code in an emergency" excuse! First of all, where would you find a Horse? and having a Horse pull your car, will get you to your destination about as slow as Morse Code will get your message to IT's destination!

Jim it's hard to believe that you actually think people listen or care
about anything you say. Your posts over the years have been filled with
garbage name calling, references to 'yellow devils', fags, homos and
every other name you could call. It's amusing to watch you re-post this
garbage and then to 'thank' the news group and amateur radio community
as if someone actually believes you, or gives a damn.

Yea, but only no-coders in the United States, I'm writing to the RAC Monday to encourage them to upgrade the Advanced license from 12 to 20 wpm in hopes it will delay your HF phone operation. Of course your never going to make 12 wpm anyway so I guess it doesn't matter. With all the time you spend trying to talk to the police by calling them on police frequencys when would you have time to operate HF phone anyway?

Tim

It has nothing to do with Code OR theory! The CB bands are what they
are because of NO CALL SIGNS so they can be anonymous. The "poor
sounding" radios and overmodulation you speak of has nothing to do with
them not knowing what they are doing, they WANT the radios to sound that
way and modify them to get that desired sound. Therefore they DO know
what they are doing, even if it sounds horrible.

Morse Code or Theory requirements have nothing to do with CBers
constantly whistling into their overmodulated radios for hours on end.

Make it a requirement that they have to identify every ten minutes with
a call sign that gives away their names and locations, and that practice
will end IMMEDIATELY as others will rip the antennas off of their homes!

Hey all!

I have an asinine CB'er neighbor with a "pawhr mahk". Her overmodulated commentatry on Clinton, the weather, the power company and the state of her bowels interferes with television reception in a three block radius in our area. She also causes problems with telephones with her closest three neighbors.

Of course, no amount of cajoling will convince this person to turn down her *&^%$@! powered microphone.

I have offered to build her a chebychev filter (I have experience from teenage experimentation with a ramsey radio kit) for her to cut down on this silliness.

Where is a good source for CB filter schema (11 meter? I am neither ham nor CB'er, so be nice! ;-))

This is cross-posted to several groups. Sorry, I am not a regular reader and don't know which is apropriate.

Please email too if it won't be too much trouble!

I would tend to agree with you but there is another point. During the last 10 years, while there has been a sharp increase in the number of no-code licences being issued, there has been very little added to our technical advancement skills, as a whole.

Most no-code amateurs simple want access to the amateur radio vhf + bands and the autopatches. Of course now with cellular radio even autopatches have dropped off.

Packet, brought in during the 80's, was our last technical achievement.

I would agree that code could be replaced with technical skills, but, show me were the no-code technical types have made their marks with incresing our trechnical advancements, over the past serveral years.

Hi Dale
I looked at your webpage. To say I am impressed would be a
considering understatment.
My major congratulations.
I am working on my own webpage, which is more of an autobiography,
but, I am wondering if you would allow me to set up a link from me to
you?

>Tom Repstad <rcc@together.net> wrote:

>>Why don't you start "rec.radio.nocode" newsgroup and move this discussion
>>there... we are tired of it.

It already exists: rec.radio.amateur.policy was created years ago
to take the code debate off of .misc and the other groups. But
folks such as M@S@ insist on cross-posting his anticode comments
to as many groups as possible.

>if we don't see any code/nocode discussions, what are you going to
>talk about ?? weather ??

Go back to the archives, son, and look at what we used to discuss
on .misc prior to you spreading the debate onto here.

A simple act would clear of this plague - include the line:
Followup-to: rec.radio.amateur.policy
in the header of your next code-related article.

Sorry, but IMNSHO, that assertion is absurd ... it is easier than
ever to design things ... the ICs available, the software tools, etc.
ALL combine to make it easier than ever before ... you just have to
have the KNOWLEDGE (and not have your brain rotted out from all that
pulsed RF :-)

> dahs. Remember 26 characters and 10 numbers. What a crap ?

By sight, not by sound, right? You took a slow-speed test (5wpm in
Canada?), wrote the dits and dahs on paper, then translated them
to characters. Yes, that's possible at say, 5wpm, but pretty much
impossible at higher speeds.

>No wonder why CW doesn't make good hams on HF.

Oh, but it does. Just listen to the hams *using* CW; you won't find
a nicer and more helpful group anywhere else.

Okay, Masa. You find an HF amateur freq'y where code is not permitted,
and we'll let you operate on that freq'y with your very own code-test-free
HF license.

Hi

With the arrival of a new solar cycle I have the temptation
to install a 5 to 10 watts beacon around 28.2 Mhz.
What is the typical setup for a 10 Meters beacon?
Is this available in a single box? How do you have build
yours. Where I can find the needed informations for this project.

Thanks for your collaboration.

The entire ham community would benefit by increasing the population of
hams on all the bands. Right now there is one path to higher bands, we
propose to create two.

The attack on the fuddy-duddy rules is not personal. There is a whole group of us seeking consensus. Nice try to isolate the views to one person.

>
>Is Code a technical necessity? Not really.
Ahh.... progress

^^
We all know how you fuddy-duddies whine and moan when you cant make that DX contact that you have been wanting.

What is the incentive to run huge linear amps, hi gain directional antennas, tuners, etc? You want to make that DX contact! Then why is it irrational to assume the fuddy-duddys want the band as clear as possible without spending a dime.

We got your number.

>Many folks
>feel that something valuable should be worth working for. We could change the
>requirement to having to stand in front of the radio club in your underwear and
>reciting the Amateur's Code from memory and it would accomplish the same
>purpose: If you wanted a ham license, this is what you would do.

Here it is again. You have to spend time doing something that is very mindless and boring, instead of spending time doing something that is enriching and interesting and that has far more value that twitching your hand.

I guess that is the only possible explanation--other than the true one, (keeping your bands clear). Why don't you JUST ADMIT IT?

>
>You've got to want it BADLY ENOUGH to do a little something extra to get it. If

Fuddy duddy code words: childish, cry baby, whiner.

>frequencies to those who learn code. They wanted it enough to buckle down and
>do what was required. We've "dumbed down" almost everything else in America,
>even the CB radio service.

That;s right you have dumbed down the higher classes. They can twitch
their hands fast enough and in the right pattern, but have had no
incentive to learn a little more about radio theory.

>
>Pardon us if we ask you to do something to show you want the higher class ham
>license. Increasing the scope of the technical exam is not the answer--that
>would be more restrictive to many people,
^^

So by your arguments, they cannot show you they want it bad enough by
learning more?

You really don't want more people with knowledge, do you? You just
want to see those hands twitching. Why was the Amateur Radio Service
enacted into law? To keep people like you busy with something to do
with your hands?

>and it would not promote growth in
>the hobby. We proved that with the old Technician Class of license. Code makes
>a nice, friendly, easy-to-overcome filter. I'm sorry, but your arguements just
>don't hold up.

Liar.

>
>I regret to inform you that there are many areas in life where they won't
>"lower the bar" for you. I hope Amateur radio always will remain one of these.
>

You just said that increasing the technical scope "would be more
restrictive". Now you say we want the "bar lowered"?

Obviously, there is no response in the fuddy-duddy code of rules and
regulations for you to consult, so you took a guess--and contradicted
yourself.

YOU ARE IN A ?INE FIELD

806. Attacking The Fuddy-Duddy Handbook

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-07 00:00:00 UTC
From: nospam@nospam.com
Message-ID: <34dce50e.37865617@nntp.a001.sprintmail.com>
Source record: 179060

All the responses to my previous posts have something in common:
not wanting to learn the code to gain a higher class of license and hf
privileges is

1) A personal short-coming
2) An unwillingness to learn
3) A desire to beat the system
4) Plain old whining.

These arguments are enumerated in Fuddy-Duddy Code of Rules and
Regulations, which is designed to shroud the real reason for imposing
a code requirement: keep the bands allocated to the higher license
classes more free and clear.

We propose a no-coder response.

CW is a skill--it does not take any creative thought. You dont have to
know how to add or read or spell. You dont have to ask yourself-is
this approach better or that approach better. Basically you don't
have to think. Any code transmission just depends on short term memory
ability and pattern recognition. As you get better, the process
becomes even more automatic. To masters of this skill, we afford the
best privileges. GO FIGURE!

On the other hand, learning about various radio topics such
distortion, propagation, bandwidth, microcircuits etc does require
analytical thought. You have to be able to choose solutions, know why
certain bands magically spring to life, figure out why your signal
does not get through. Just think: some kid could find interest in a
transistor instead learning code. Technical know-how is KNOWLEDGE, not
a skill. KNOWLEDGE will serve you far more than copying code at 10
wpm. Prove me wrong!

Therefore, would access to the higher classes by no-coders be
acceptable if the technical theory requirements were increased?

Now undoubtedly there will be some who don't know a Smith Chart from a
sheet of polar graph paper and don't care to learn because of

1) A personal short coming
2) An unwillingness to learn
3) A desire to beat the system
4) Plain Old Whining

Let them access the higher classes with a code requirement.

Ask your local fuddy-duddy. Let them know you are here.

Patience.

progress of making ham radio? (JUST AN OPINION)

"Progress?" HA!

Hams ceased to be progressive leaders in new technology several years ago.
Now, it's just the opposite. While the rest of the world embraces digital
communications and the Internet, stubborn HAMBOS cling to an outdated
requirement of making mechanical noises by tapping two pieces of metal
together.

hello. In Canada, voice is permitted in every single freq except 30m
band.

we should allow no coders to be able to use all HF bands except 30m
and if someone wants to use 30m, force CW requirement.

Sure can. I've got several HTs, and I keep AA packs handy, with a couple of bricks of 40 ea Toshiba AA alkaline cells on hand.(They're cheap at Sam's Wholesale Club-$9.95 for 40 batteries). So I won't even need to depend on 7-eleven. Such insurance, kept in force, is not likely to ever be needed, according to Murphy's Rules of Engagement. But just try getting caught without......

Hi Al: Don't take the what's below personally, as it responds only to your
contentions.

1. Apples and oranges: Cardiologists are not Amateur Radio Operators.
Cardiologists start out as plain MDs (no, not *that* MD!), then
specialize. Hams start out "plain," then "specialize" also.
2. Boys can become cardiologists. Boys can be Amateur Radio Operators.
Men can be Amateur Radio Operators. Boys can become men. Men can
become boys. Moot point anyway: Men and boys are both male.
However, sometimes boys behave better than the so-called "men,"
who are very often "men behaving badly" on the bands. But: Your point?
The implication is that somehow Morse code ability makes one greatly
superior to those who have no such ability.
3. Not everyone can learn the code. But then, some, though not everyone,
have the awareness of what other folks sometimes have to deal with.
4. Evidence of the "filtering" radio-racism: "separate from CB"!
One listens to certain bands and wonders -- if one can "hear." I do hear,
even though I'm mostly deaf. I *can* hear enough, with help, to get
by. And what I do hear in the ham bands in spots makes CB look tame.

In any case, IMNSHO, Morse code TESTing is no longer justifiable as a separate
pass-fail testing requirement for HF frequency access licensure.

> Makes it seem that there is a group of white-haired old men who
>>have a personal conspiracy against you. Sorry, Charlie, it just ain't so!
>
>Who said anything about a conspiracy?

Read the post, NoSpam. It says you make it SEEM like a conspiracy.

> It takes DOING something to
>>get the Amateur license!
>
>Raise the technical knowledge requirement.

Sure. Kill the hobby real fast. You grumble about how difficult it is to learn code and how it is keeping newcomers out of Amateur radio. Meanwhile, lots of fine folks struggle to master enough electonic theory to pass the examination. Your proposal would restrict the bands far more than the Code requirement ever did. Presently, we are getting new hams from ages 8 to 80. The technical part of the exams is just fine. And those who want to learn code, do so. What in the $#%^ is your beef???

>
>The entire ham community would benefit by increasing the population of
>hams on all the bands.

I agree with you on this. We have grown a lot, lately. And the growth has been good.

>We all know how you fuddy-duddies whine and moan when you cant make
>that DX contact that you have been wanting.
>
>What is the incentive to run huge linear amps, hi gain directional
>antennas, tuners, etc? You want to make that DX contact!

See....there you go again with the sterotypes. Lots of hams never:
a. work DX
b. run huge linear amps
c. have elaborate antenna systems. (I confess to owning three Dentron tuners, however).

> Then why is
>it irrational to assume the fuddy-duddys want the band as clear as
>possible without spending a dime.
>
Because your thinking is flawed, NoSpan. You are guilty of lumping all of those who oppose you into a neat little box--thinking everybody is the same. These same Fuddy-Duddy's (as you have labelled the box) are active teaching code and theory to aspiring hams. Now what about your theory that we want to keep the

bands clear without spending a dime? The truth is, we are engaged in activities which will INCREASE band occupancy, and we're spending something much more valuable than "a dime". It's called TIME. That's right--time we could be operating on the air.

>
>We got your number.

No, Old Son. We got YOUR number, and you just won't admit it. Let me repeat what has been said before: that a large percentage of the Drop The Code gang would benefit in some way if the code requirement goes away. It might allow them, personally, upgrade. It might help their spouse or child get on the air. Maybe it's a friend they want to talk to over the air. But somewhere in many of these lives is a PERSONAL reason for banging the No Code drum. You can take that to the bank. Just ask them---one or two might "fess up". The point is that your group is presenting this as some lofty cause to benefit all humanity, when in all likelihood, you have a personal agenda and you don't really care if it helps or hurts the hobby, long-term, as long as you get what you want.

You want to appear as a knight on a white horse, here to save us from something dreadful. I'm sorry. I'm just not buying that hog.

>You have to spend time doing something that is very
>mindless and boring, instead of spending time doing something that is
>enriching and interesting and that has far more value that twitching
>your hand.

"Twitching your hand"? That's the equivalent to saying you drum your fingers on the keyboard of your computer! (Assuming that you manually enter data with a keyboard, vs. using your breath on a specially-designed computer, in which case I apologize for the remark. I realize some folks don't have fingers, or can't move them. By the way, there is one such person who uses breath to send Morse Code so he can communicate with those around him.)

>
>I guess that is the only possible explanation--other than the true
>one, (keeping your bands clear). Why don't you JUST ADMIT IT?
>
I refer you to the remark earlier about volunteering free time to teach Amateur radio classes. Real stupid way to keep the bands "clear", isn't it!

>
>Fuddy duddy code words: childish, cry baby, whiner.

Well, son, we calls 'em as we sees 'em.

>
>That;s right you have dumbed down the higher classes. They can twitch
>their hands fast enough and in the right pattern, but have had no
>incentive to learn a little more about radio theory.
>
>
You'll find that the higher class examinations are very rich in theory. The

tests are upgraded periodically, as technology advances. I'd hate to see you make the exam SO advanced that only a select few could get in! Opps! That's what you're accusing the Code of doing, isn't it. My, My. You don't suppose there is a middle ground, somewhere? Like having reasonable technical exams, plus a "filter" which anyone can pass through with just a little work? (Remember, there is a waiver on the "filter" for those with legitimate problems). How much more generous could we make it? You're looking for a world where Amateur tickets come in cereal boxes.

>
>You really don't want more people with knowledge, do you? You just
>want to see those hands twitching. Why was the Amateur Radio Service
>enacted into law? To keep people like you busy with something to do
>with your hands?
>
>
Well, at this point in your post, you lost touch with reality. I sense how strongly you feel about the code. But you are way out in left field. For example: When the original poster said:
> I'm sorry, but your arguements just
>>don't hold up.

You replied:
>Liar.

Sounds as if you have been backed into a corner and are lashing out by slinging mud.

>>
>>I regret to inform you that there are many areas in life where they won't
>>"lower the bar" for you. I hope Amateur radio always will remain one of
>these.
>>
>
>You just said that increasing the technical scope "would be more
>restrictive". Now you say we want the "bar lowered"?
>

What? Did someone advocate lowering the technical scope of the exam? Nothing in the original post was contradictory, as you accuse it of being. Let me give you some advice, son. Don't take a knife to a gun fight! You obviously are out of your league in this debate, primarily because of your emotional involvement. You have stopped reading and responding to points in the post and are simply grabbing for anything you can--regardless of whether it is revelant or accurate.

>
>Obviously, there is no response in the fuddy-duddy code of rules and
>regulations for you to consult, so you took a guess--and contradicted
>yourself.
>
>

Young fella, let me share a secret with you. There IS NO fuddy-duddy code of rules and regulations. We are guided by the FCC rules and regulations, and by the Amateur Code. Every response has to be measured against that.

Your Drop-the-Code gang has been insulting and disrespectful, time after time. You deal in sterotypes instead of recognizing individuals. You are promoting a selfish agenda with no regard for the hobby, itself, or for a system that is working quite well, thank you.

Meanwhile, the rest of us have tried to be patient and we gave a sincere audience to your side of the story. It is obvious from this post that you have gone "down for the count". There are no new ideas in your post. There is no logic. You frequently misquote things to try to make your point.

I'm sorry, son. I'm moving on to other things. Take this to .policy and see if you can find people who will listen.

>
>

Good grief! Get a life. Tornados affect a relatively small area. You should not have to drive more than a few miles to find something open. I speak from experience, living in a tornado prone area.

Meanwhile, if you truly are interested in helping in an emergency, you keep some things on hand. Batteries are one of these. BIG batteries.

Sorry to lose my temper, old man. I simply have no patience with those who don't prepare for emergencies in advance, and then want to tell us "how bad it was". Participate in some drills; and go to some training/seminars. You still might find yourself in the middle of a terrible situation, but you'll be better prepared to survive!

I have a business to run, so I'll have to be brief. It should not take long to refute NoSpam/NoCode because there is no substance to his reply.

>
>What is the incentive to run huge linear amps, hi gain directional
>antennas, tuners, etc? You want to make that DX contact! Then why is
>it irrational to assume the fuddy-duddys want the band as clear as
>possible without spending a dime.
>
>

You sure have not been in my ham shack. I am the owner of the radio beacon on 28.2215 MHz, and the primary transmitter is a 24-hour/day 8-watt unit hooked to a homebrew folded dipole. But this is a 100% Morse Code statation, so you couldn't be aware of that, of course. Your idea of ham stations seems to have been formulated by looking at the cover of CQ magazine down at the newsstand.

>Why was the Amateur Radio Service
>enacted into law? To keep people like you busy with something to do
>with your hands?

Gosh! I hope as you move into the hobby some day, you take some time to learn about its past. Your ham experience will be much richer if you do.

>
>You dont have to be old to refuse to accept logic.
>
>

I love logic, when I find it. But the No Code group has not displayed any great brilliance in the logic field. Besides, some things, on the surface, do not appear logical. Let me give some examples with which you probably are familiar......

Black power rifles are enjoying a comeback, as are bows and arrows. Wow! Talk about obsolete technology! You certainly would not argue that these are critical to feeding your family or to the national defense. But sporting goods stores have trouble keeping the items in stock. So it is with code. It's an old technology, but it is fun. The CW bands are as populated today as they ever have been before--and many of the participants are young folks (which I define as 15 to 50).

Bicycles. Now there's an outmoded form of transportation! Not only outmoded, but very incompatible with the automobile, when using the same roadways. Yet, a company near me has sold more bicycles in the past 10 years than were built/sold during the vehicle's heyday. My state (NC) even has a department dedicated to pedistrian and bicycle affairs. Meanwhile, Code is compatible

with the rest of what goes on in the amateur bands. It is allowed everywhere, and in the cases of beacons, repeater identification, weak signal work on VHF, moonbounce communications, and (until recently) RTTY, it has been incorporated into the more modern modes.

So, NoCode/NoSpam, you need to expand your horizons. Let's not just focus on Code. Let's deal with bikes, black powder rifles, bows and arrows, restored automobiles, backpacking (why would you sleep in a TENT when there's a motel nearby???), and all the other old stuff that doesn't seem to fit in the computer age.

I've said it once, and I'll say it again. "Put your agenda on the table and let folks know where you're REALLY coming from!" You appear to want SOMEBODY to get a ham license by lowering the standard, and giving that SOMEBODY special treatment. If they (or you) need special treatment, get a WAIVER. Otherwise, stop your whinny, childish, cry baby tactics and get a code tape. As an Extra Class license holder, I'm here to tell ya, it ain't that hard!

And by the way, I'd welcome you to the Extra bands. Contrary to what you said in your post, I'm not just trying to "keep it for myself". The Code test was made much easier, a few years ago. Take advantage of it, and come join the fun! We'll even let you get an amplifier and "make that DX contact" if you want!

Have a great day!
K5PF

Read the rules. Affirmative Action causes a person's skin color and/or sex to be used as deciding factors in whether to offer or deny employment. It causes persons of higher ability to be rejected in favor of lower-qualified applicants. Determining factor is skin color. Period. Now how does a liberal do-gooder like you justify attempting to remedy past discrimination simply by transfering the discrimination to another group of people?

So who really gives a care about stolen web pages.
People have cloned my pathetic attempt at a site. I borrowed a few things from here and there too. Who cares? The point is, most people that clone my site realize my site sucks so much that they end up redoing it in a few days after copying it. Again, I don't really care! Also, when I do take things, like pictures, links, formatting, whatever, I never take the whole damn page and just change the name at the top and bottom like this guy did! Look at it this way. Web pages are made up of a lot of elements. Just like music. So what about the artists who sample old "the police" albums and such? That's in about the same category as these web pages. But, as for elemental copying, hell, you can't copyright the individual notes that make up music, right? That would be DUMB. It's the "advanced arrangement" of the content that is what can get you into trouble. I can't remember which interpretation of copyright law I saw that in, but that's what I remember.

Anyways, the point is, Suck it up. Who cares. It's a frickin' web page. If chuck wants to be embarassed by it, fine. If he won't re-do it, he should put something on there about how he didn't make it himself. Or you can put something on yours about how it is the original site. But really, how big a deal is a dumb webpage in the grand scheme of things? Change it around a bit, and let chuck have his stolen glory if that's what you need to do. Otherwise, Go get a radio and use it, and leave it in the past!
:)

my commentary interlaced below...

Dale Wentz (dwentz@accessus.net) wrote:

Are you in need of a good hearty pick me up laugh?
Then check out Cutie Boys "Canadian Amateur Basic Qualification Guide"
It's loaded with in depth information like this quote from his study guide:

"Digital System (or Packet Radio System in General)
-The antenna is located at the end to transmit or to receive (reasonable ?)
-The course of actions: you type (input/output)... the computer responses...
the modem responses...
the transceiver responses... the antenna sends out the signal..."

Boy that's a lot of responses! Everything you need to know about Packet radio is
here!
By the way Cutie Boy, the correct word would be 'responds' are you ever going to
correct the
information or just leave it the way it is?

LISTEN, PLEASE Everybody listen! For just a second listen.

The government (read: FCC) would love to make a couple of bucks by selling off chunks of (in their eyes) our underutilized HF Spectrum. If by keeping the code requirements they can keep the status quo they will do so. That way they have the perfect excuse: "Well, you guys don't use it, so lose it!"

But their position has a weak spot. They will change the code requirement allowing access to HF to a greater number of Hams, but ONLY if we are in agreement about it! The FCC smiles at this continued arguement/debate over the subject, because that means they won't have to do a thing as long as the controversy rages. And in the meantime, they can turn to considering other bids for our HF space.

I am NO FAN of the code requirement. And yet, I still diligently practice it everyday. Sometimes to the exclusion of studying for the theory portion. I do think code has it's place. I think it's great as a recreational outlet for those who want to pursue it. I am an active member of the NTS. I belive (correct me if I am wrong) that all the LONG distance traffic is passed via CW. That is incentive enough for me to learn the code. But other than that I probably will NEVER use it! This is my position. However, the fact that I still practice code means that I will go along with what everybody else decides.

My main point is, that we must all get on the same side and stop arguing about it. Let's put it to a vote and end the debate (which has been going on, surely, long enough).

One thing I keep noticeing on this NG and others, is that most of
the no-coders (for lack of a better word...not an insult) are wanting
something for nothing. I have been an amateur for almost 30 years and

am very proud to be an "old, gray, old timer" and have always enjoyed
working with newcomers to the hobby. I have attempted to stay up with
the technology involved in our wonderful hobby and, as most oldtimers
can attest, it has changed tremendously in my last 30 years. I'm sure
that many of us can remember the stress of learning "the code" and
taking their first novice tests... and passing! I was 12 when I
passed my test at 5wpm... along with 3 friends. We had helped each
other (along with the help of several "old timers") to learn the code.
Four weeks later, my 10 year sister passed the test. We were all
proud. That was then...
Learning the code, to some, may be old fasioned and maybe it is
outa date... but it definitely ISN'T HARD! To the no-coder: my
thought is... instead of sitting on your ass bellyaching about what a
bitch it is trying to learn code and using all your energy sitting in
front of your computer flaming the very amaters that have already
passed the tests and trying to convince them how you shouldn't have to
take the code test.... try using that energy to learn the code. You
might actually find a little bit of that proud feeling the amateur
has when they pass the test.
Lastly, why not use this NG as an information forum for friends
of a wonderful and useful hobby....and not as a killing field for a
pack of wild dogs. Amateur radio is a brotherhood, an organized
grouping of intelligent men and women enjoing a common hobby
to its fullest. Why not act like that?

Respect has to be earned. I've met enough hams to know which ones
are worthy of respect and which aren't. Just because someone is older
doesn't that they're smarter or wiser. In some cases, the ones who
have been licensed longer than W1AW are some of the stupidest. Especially
when they spout their "Just shut up and learn the code" rhetoric.

You bet Cecil. 1 Watt CW can be heard easily within the U.S. depending on the freq and conditions. Not a problem. I do have a few schematics for QRP circuits but not in postable form. Try searching for QRP and see what you find. A circuit that I have in mind is called the "One-er".

They're called "Peanut Whistles", Cecil. I posted about a dozen
one- and two-transistor xmtr circuits on here about 5 years ago
(or maybe it was on .homebrew if it was around at that time).

I use a two-transistor 5w xtal xmtr on 40m from here in Hawaii.
Covers quite a bit of the Pacific. Circuit appears in Demaw's
book QRP NOTEBOOK. I've built a three-transistor VFO for it -
stable as a rock. I've also built two- and three-transistors
rigs for 160m, 80m, and 30m. Lots of fun, Cecil.

The 3579 kc xtal (available in color TVs and computer gear) has
become the center of fun for a huge gang on the East Coast. They've
designed several QRP xmtrs around that xtal. Right now, a nation-
wide building contest, sponsored by QRP ARCI, is in progress -
design and build a transceiver using no more than 22 of the venerable
2N2222 transistors.

I suggest you turn *down* the power on your rig periodically to
see what you can do with just QRP and QRPp (milliwatt range).
Also, look for Ade Weiss' book HISTORY OF QRP IN THE U.S. and
read it. In addition, monitor the NCDXF beacons - each beacon
decreases power from 100w, to 10w, then 1w, then finally 0.1w
during its xmit cycle. You'll be shocked at what you hear.

Jeff KH2PZ (/KH6 to keep Hans happy)
(other rigs: Galaxy GT-550, Globe Scout 65A, GRC-109 military
transmitter, converted CB-to-10m xcvrs)

together.

"Where's that big 'ol CB RAMBO??"
"I wanna hear him TALK
>TOUGH!!"

So what progressive innovations have you came up with, Drew? What project are you working on? I've got a couple of things I/m working on that I am not aware of anybody else working on the same track on. How bout you? Even though I try to waste a little time tapping two pieces of metal together once in a while, I still manage to be at least a little bit innovative and progressive.

I'm no hotshot engineer with half the alphabet after my name. In fact, I didn't even finish high school. What I know, I know only because I cared enough to learn. Correct me if I'm wrong, but don't you have more formal education than me? Aren't you at least as intelligent as me? If you are going to point out that us hams are not progressive, you should set an example for us to follow.

Well, this makes a nice conspiracy theory, but when we interject small things,
like >facts<, into the equation, it doesn't hold up. Exactly who are these
faceless "buyers" of our HF spectrum. Exactly how much HF spectrum has the
FCC auctioned off over the past decade?

>I am NO FAN of the code requirement.

That's obvious.

I've been out of radio for many years, and it's time to sell all my old treasures.
For Sale:

* Complete Yaesu FT-101E station, with extra 11 meter mod, AM filter, FV-101B external VFO, and YC-601 Freq Counter. All is perfect except the counter stopped working for some reason.

* Yaesu and Standard 450MHz business band tranceivers, with CTCSS boards.

* Ritron Responder 10 watt VHF repeater with factory phone patch and handheld radio w/ dtmf pad.

* 2 Johnson Viking Rangers, with PTT. One is completely rebuilt and very trick.

* Johnson Courier KW amp for the Ranger.

*** For enough money, I might part with my vicious Johnson Viking Valiant or my Johnson Viking 500!

* National NC-300 receiver.

* Collins 390A receiver.

* Golden Falcon 400 mobile amp- custom flip-top case, backlit panel meter, etc.

** 2 classic Hy-Gain "Footlocker" mobile amps, one with custom remote control head.

* Nice, short equip rack for above with military slide-out drawer slides.

* Miscellaneous old radio gear like Johnson transceiver tester, Diawa CN-720B pwr/swr meter, some Johnson parts, etc.

* 2 very nice Panasonic 49 MHz 2-line cordless telephones with speakerphone, speed-dial, etc.

** Cobra 148GTL with DigiScan unit, Cobra 129LTD.

I'm in the San Fernando Valley (Los Angeles), California area.

You have to remember a crucial point of human nature here: People who come
from that era are coming at you from a perspective of a time when people didn't
think all that much, when "doing" was everything.
Not to mention that was the time of "children should be seen and not heard,"
i.e., "shut up and do as we say, because we're more knowledgeable and
experienced simply because we're older, so respect your elders and shut up and
do as we say." At that time and place it *may* have applied in certain
situations, but today it doesn't wash. Unfortunately, old habits are hard to
break, i.e. "can't teach an old dog new tricks."

> computer age.

But, you fail to realize that NOBODY forces ANYONE to learn or pass a test in
ANY of those other antiquated things ... they do them voluntarily because they
choose to do so for personal enjoyment ... as has been said before, nobody is
forced to pass a horse-shoeing test in order to obtain a driver's license to
drive a car ... hell, you don't even have to prove you can drive a manual
transmission car ...

Stop insisting on cramming Morse down everyone's throats as a hazing ritual
for access to the HF bands and I'd bet you'd see a lot more folks than you
think who will voluntarily learn Morse ... and those that don't choose to
do so won't be harming you a damned bit ...

> I've said it once, and I'll say it again. "Put your agenda on the table and
let
> folks know where you're REALLY coming from!"

The "agenda" is simple ... we desire to ultimately persuade the government (the
FCC) to modify present rules in Part 97 to allow access to the HF bands by all
technically qualified individuals, regardless of whether they choose to learn
the Morse code or not. NOBODY IS TRYING TO BAN THE *USE* OF MORSE BY ANYBODY
ANYWHERE ON ANY HAM FREQUENCY. Many of us also desire to see other rules
changed,
mostly those that presently obstruct the ability of hams to experiment with and
use modern digital communications techniques ...

It's really that simple.

From a design standpoint, just use a keyer chip and maybe a 555 timer to turn it on every so often. Everything should fit in a matchbox sized package. program your beacon message, id, whatever, hook it up to power and your key jack, and go.

Yrac

And seamen, who must identify lights by their morse ID. and RACON beacons, and might have to decipher a message sent from a navy ship by flashing light.

Not to repeat myself, but if two people who share or mostly share an alphabet but not a language must communicate at a distance, text based messages are better than voice messages. The receiving station can take his time to figure it out in light of what little he knows of the other language, and similarities to his own. He is not confused by the foreign accents or speech peculiarities. He can examine the text over and over without asking for a repeat here or there.

That means either CW or one of the other digital modes.

Case in point... I often work Spanish speaking hams on RTTY or CW. I am quite comfortable with written Spanish. SSB is a different matter, though. I often fail to understand anything that does not pertain to radio or is not stock QSO type stuff, especially if the sender speaks with a different accent than I am used to. A Columbian or Dominican ham talks quite a bit differently than, say, a Mexican or Peruvian ham. Yet, on paper or on screen, their language is virtually the same, and very intelligible to me. If I get stymied, I can turn to a dictionary, since I know for certain the spelling of the word.

Q codes, Z codes, 10codes, codes by any other name are not the real issue here. You can use them on voice modes too, after all. It is the MEDIUM: audio information or text information, that is the crux. It is the visual representation of the information that improves intelligibility, not merely the shorthand we have evolved for more rapid communication.

You have a bug up your a** about CW so you lump in the entire amateur commmunity in together and put us in some sort of opposition to the rest of the world.

By the way Anon boy, I've run plenty of digital on HF and made lots of DX contacts running various speeds of digital.
How many have you made? Uh huh, that's what I thought. Ever heard of TAPR? Ever been to a digital seminar at the Dayton hamfest? hmmm haven't done that either huh? Well tell us how you have come to know so much about digital Rambo?

Same comments above. No knowledge of bicycles needed to drive
obtain a drivers license is there?

>So, NoCode/NoSpam, you need to expand your horizons. Let's not just focus on
>Code. Let's deal with bikes, black powder rifles, bows and arrows, restored
>automobiles, backpacking (why would you sleep in a TENT when there's a motel
>nearby???), and all the other old stuff that doesn't seem to fit in the
>computer age.

Pleasse, where's your logical relationship between the things you
identify and the code test REQUIREMENT.

>I've said it once, and I'll say it again. "Put your agenda on the table and let
>folks know where you're REALLY coming from!" You appear to want SOMEBODY to
>get a ham license by lowering the standard, and giving that SOMEBODY special

>treatment.

Not at all. We just want requirements that are relavent to contemporary ham communications needs. Just as the examples you gave above are purely recreational pursuits and have no skill requirements for licensing, so is the situation today for CW knowledge.

Good poin t Michael,

If some of the no-coders hate the code as much as the seem to,
from what they post in here, then the next logical step for them
if they can get the code testing dropped, will be to bitch about
being QRM by CW, even when they start a QSO within a KC
of a CW QSO.

The no-code agenda reeks of the same thing the anti-gunners
are about .. a little at a time.

Notice the typical No-Code Agenda reply. When backed into a corner, attack
your opponent at a personal level in order to attempt to put them on the
defensive. Evade answering the question, obfuscate the issue, and delay.

I'll answer for Carl, Yrac:

@SUM(Carl's Life) =
"See, I've been a Tech+ for 25 years. I want
to get on HF and scream 'CQ DX' into a microphone like everyone else, but
I can't pass a 13wpm code test. I shouldn't HAVE to pass a 13wpm code test,
either. See, I'm one of the beautiful people. I'm a genius. I've forgotten
more RF theory while sitting on the toilet this morning than the entire
ham radio population in the universe combined knows put together. I'm special.
I deserve special rules. So, I moved to Mexico for a while so I could
bypass US law and operate on HF without taking a code test, but the water
was lousy and I had to come home. So, now I fabricate a story about wanting
to do some kind of HF 'experimentation', because the propagation there is
better and all, but nobody is buying my reason. I guess its 'cuz I haven't
contributed anything to ham radio in the past 25 years, so people know I'm
not gonna contribute anything now either. So now I have to live out the
twilight of my ham radio life on the Internet insulting everyone who is
"holding me back" from obtaining my true potential in ham radiodom. What do
they know, after all? They're a bunch of morons, idiots, assholes, and senile
old-fartz. I'm a genius. I'm special. Anyway, what
I've discovered as of late is that I'm not really interested in ham radio
anymore inasmuch as I am interested in getting on my Internet account,
staring at the No-Code-International home page (manned by people who are
truely enlightened, like myself), and creating as much
noise as possible about how bad ham radio is on rec.radio.amateur."

>There is no "lofty ideals BS" as you put it ... it the "ideals" look
>"lofty" to you, maybe you're starting to see some hint of reality instead
>of your jealous hatred of anyone who suggests that licensing requirements

>need to be changed from what *you* had to go through ...

See paragraph #1 reply, above.

Let me see if I have this right. You say more technically competent peoplewill come
into Ham Radio when and if the code requirement is dropped.
If the reason they are staying away, in droves as you seem to think, is that
they can not use HF with a no code ticket then I don't understand. I have
seen it posted that there is nothing technical about CW, which is in a sense
true, but then there is certainly nothing technical about operating SSB on HF.
So why would these technical minds care about HF, what can they do of
a technical nature on HF that they can't do on VHF/UHF ? So what is it that
is keeping these technical minds off the VHF/UHF bands right now, one can
get there sans code.

I merely pointed that out about the stores being closed because
of no electricity to point out to that dude that the possibility of
them being open is pretty low. There was not one whine in
my post anywhere.

Back then I did not have any battery operated equipment so I did
not need batteries for that purpose. I did have a couple of Coleman
lanterns and some fuel on hand, a couple of flashlights and some
batteries for them. I keep about 30 gallons of water for an emergency
at all times, and when the clouds started forming that day I filled both
gas tanks in my pick up.

I have no patience with someone who assumes so much from so little
and jumps on someone .. Kiss me where I can't

This is true. There is nothing wrong with viewing ham radio as a hobby.
For most of us, it is a hobby 99% of the time. The problem isn't with
the "hobby" aspect, its with people who view ham radio ENTIRELY in that
mode. They don't understand the history of ham radio, what its roots
are, and they don't appreciate the privilege of having been granted an
amateur radio license. They come into ham radio believing that ham radio
owes THEM something, rather than the other way around.

>not always true, except in some cases. Being a former cb'er, I had to

Nothing wrong with "upgrading" from the anarchy of CB radio, Eric.
Unfortunately, even the best of us can sometimes "fall in" with the
wrong crowd when we first get licensed. After all, you meet a bunch of
new people, and unless you have prior knowledge or an elmer, its bound
to happen. The key is to discover your error before its too late, which
it sounds like you did.

>I now vollunteer
>time with the local sheriff's posse (the MCSO Sheriff's communications
>posse), I put in many hours on all the local united way events where

>insulators and loose connections).

Sounds like a lot of good work. I see that you understand the reference
I used in calling amateur radio a form of radio "peace corps". Your attitude
is exactly the type of attitude we should encourage in all hams today. It
doesn't matter if you know code, don't know or want to know code, if you came
from the ranks of CB radio, or if you are a professional engineer by trade.
All that matters is that all hams should have an attitude similar to yours.
I congratulate you on your accomplishments, and believe others would do
themselves a favor if they looked at you as an example of what a ham radio
operator should be.

Do you really think it matters to the government how many Hams
are using HF ? Money talks, bull shit walks. If the government
wanted to ban Amateur Radio what could we do about it besides
squawk, and boot leg.

There are enough people against gun-control to the point that several
gun-grabbers got voted out of office over it. There must have been
plenty of protests sent to the gun grabbers when they were in office
if the majority of the people feel that about it to vote them out. Did
them get voted out of office stop those still in from pushing the agenda
to dis-arm America ?

Good post Dewayne,

Like you say, the Ham community is a brotherhood, or at least it used to
be.
Maybe I should just say that it used to be a stronger brotherhood than it
is
now. There was a time that anyone who held a Ham Ticket had really wanted
the ticket, to the point that they were willing to work at it.

The present day no-code advocates probably won't understand why, for an
example, when I was in San Diego and one of my neighbors gave me an old

Stero that they did not want to take with them when they moved (and it had a
busted speaker and did not work) when I mentioned to a local ham that I was
looking for a speaker and that it was so old that I could not find one at the parts
store (it was the type that used the speaker windings for the choke also) he told
me to come on down he had some that might work. When I got there he did
have one and would not accept one red cent. He had it, I needed it, it was a
brotherhood thing.

Most of them certainly won't understand why when (back in 64) a Ham in the

next state over told me he was looking for a certain value filter choke, I had one
and put it on the bus to him. It was a brotherhood thing. I had never met him
in person and never did.

Now comes the whipper sniffers, I mean snappers, and want to dilute the
brotherhood. Do you think we should ever show the no-code whinners
the secret handshake ?

If the ZZZ does not work then look for a voltage regulator that is
breaking down. If you can identify the regulators then use a can of
freezant on it when the power is down and see if it brings it back
up, or hold the tip of a soldering gun near it to see if it will pull it
down.

If that does not fix it then do the same thing to the RF power device
and driver/drivers.

If that does not fix it I bid $25.00.

"Upper 60% of 27 MHz"? That doesn't make sense. The freq'y 27.000 MHz
has zero bandwidth. Did you mean to say "upper 60% of the one megahertz
region lying between 27 and 28 MHz"? If so, that would be 27.4 to 28.0.
That's not in any ham band, so why would us hambos pay any attention?
Of course, once the creeps creep above 28 MHz, then the fun begins:
CW transmissions on top of their illegal QSOs is great sport (and
deemed legal by the FCC).

Hello.

Ham radio is already dead or at least started to die.

I live in Montreal and 2m repeaters are very quiet.

I scan and I almost hear nothing.

For HF, I rarely hear voice communications (for CW, I rarely here
north american stations as often as I do on international stations).

Pro-CWers, wake up. Ham radio will disappear very soon.

>Eric desperately wants but cannot achieve.

Horse poop. Many communication positions are open *only* to volunteers.
I'm a communication volunteer for Oahu Civil Defense - there is no
equivalent paid position, and I wouldn't want such a position even
if it existed. (My regular paycheck comes from teaching mathematics.)
As a volunteer, I go to work only where there is a impending emergency
involving the County of Oahu (hurricane, tsunami, flash flood, aircraft
accident, et cetera). Exciting work for a volunteer.

On the other hand, paid fulltime dispatchers (and DJs) are educational
losers locked in dead-end jobs.

>"Where's that big 'ol CB RAMBO??"
> "I wanna hear him TALK TOUGH!!"

There are 13 capitalization errors in those two sentences, and the
quotation marks make it appear two different people are talking about
you. Is that what you intended?

Both of these posts remind me of a local Ham here, a no-coder,
who would use his HT to call up the auto patch to make a phone
call rather than getting his lazy butt off the couch and using the LL,
then wondered why they cut him off the repeater.

I would say that one who looks at it as merely a pass time would be moreprone to
view the rules as prohibitive, rather than having a purpose, and
thereby be more likely to violate the rules. After all, that is what we are
hearing about the rule now "prohibitive" when it pertains to code as a
license requirement.

Pure bull shit Dumbo

If that is the case why did I at one time teach a Novice class .. why was
I at one time an active VE. Why do Hams today still teach Novice classes
and why are there still VE teams in every city/town/and some communities
today.

The Lord helps those who help theirselve's. He provided a General Class
License for those who helped themselves and learned 13 WPM code.
Everyone else is on their own.

Wow, why did you not tell me you are so fluent in electronics.

By the way, I read onced that in Canada if one lives in a remote
area that one could merely state in a letter that he/she knew theory
and code and regulations and be issued a license good for 12
months. Going in for a test required for after that time period.

Uh, how much longer do you have before your actual test ?

Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur

Code Sucker went trolling again and blabbered::

> Hello.
>
> Ham radio is already dead or at least started to die.

Not quite, look at the numbers you goon, don't base you opinion on the fact you cant hear anything in Montreal.

> I live in Montreal and 2m repeaters are very quiet.

This is because the locals know your listening and have moved to other frequencies. This phenomenon probably occurred in Vancouver and will no doubt follow you to your next destination.

> I scan and I almost hear nothing.

This is because your antennas are stuck to plastic boxes inside a brick building and your to stupid to understand what's happening to the signal as it passes through the steel in the walls.

> For HF, I rarely hear voice communications (for CW, I rarely here
> north american stations as often as I do on international stations).

Let's re-examine your 75m antenna, a hamstick equivalent is it? Stuck in the window. Too bad you spent all that money on an Icom 706 doesn't sound like your getting much use out of it. Try putting your antenna somewhere where it can capture some signal instead of telling everyone how dead the bands are. The rest of us can hear just fine Masa, what a mah roooon......

> Pro-CWers, wake up. Ham radio will disappear very soon.

We know Masa, but were too busy building gear, running contests, rag chewing, DXing and having fun on HF to notice.What kind of contacts are you making on HF Masa? You might also tell us how your running satellites with 2m and 70cm verticals stuck to box in your dorm. Inquiring minds want to know.

Tim

917. Re: Is CB Rambo A Ham? / Amateur practices.

> Yrac

Hee hee, nice try but fat chance he's too afraid of someone emailing him or sending him a QSL card. Oooooh what fate could be worse, receiving a QSL card telling him what wimp he is. For someone who claims to "TALK TOUGH" he sure clams up quick when it comes to talking about HIS employment. Reminds me of the kid throwing rocks, when the big boys throw them back he runs back home to his daddy. (i.e. anonymity) How pitiful you appear to the rest of us Rambo when you talk about someone else's volunteer work and whether or not their career choice meets your standards. Your a mama's boy with an ISP account, nothing more. *bzzzzt* game over. (and you loose)

>will come into Ham Radio when and if the code requirement is dropped.
>If the reason they are staying away, in droves as you seem to think, is that
>they can not use HF with a no code ticket then I don't understand.

That's okay, Curtis, nobody else can understand Carl's argument either.
That's because it is a non-sequitur.

For those "hoardes" of people Carl is claiming are out there, we already
have a Codeless Tech license. If these "hoardes" are interested in radio,
they will already be licensed as codeless techs.

There is no reason to create a Codeless HF license to "attract" these
hoardes that don't exist.

>So why would these technical minds care about HF, what can they do of
>a technical nature on HF that they can't do on VHF/UHF ? So what is it that
>is keeping these technical minds off the VHF/UHF bands right now, one can
>get there sans code.

There is nothing they can't do on HF that they can't do on VHF+ (except,
that is, scream "CQ DEEE-X" into a microphone using SSB.)

Closed Circuit Advisory

The following advisory is not for transmission over amateur radio. This is just a reminder that the address for the Newsline Support Fund is:

Newsline
c/o Andy Jarema-N6TCQ
P.O.Box 660937
Arcadia, California
91066

Again, and as always, we thank you. This ends the closed circuit with Newsline report number 1069 for release on Friday February 6th 1998 to follow.

<*>

The following is a QST

Phase 3d could be in orbit this spring and some big changes in store at Hamvention '98. These stories and more on Newsline report number 1069 coming your way right now!

<*>

Possible P3d launch in May

AMSAT's Phase 3d ham satellite could be in orbit this spring. According to reports from the ham radio space organization, Phase 3d Project Leader Karl Meinzer, DJ4ZC, met in Paris with European Space Agency officials on January 20th to discuss the possibility of including Phase 3d as a payload on the third test flight of the Ariane 5 booster.

Ariane 503 is expected to be launched sometime in May. AMSAT admits that getting their satellite manifest to be launched on that flight is at best a longshot. If Phase 3d does get to fly on Ariane 503 it could be operational sometime next summer.

(Via AMSAT-NA)

<*>

NYC/LI SM recall update

An update on the attempt by a group of ARRL Hudson Division hams to recall New York City and Long Island Section Manager Len Buoniuto, KE2LE. According to sources in the Big Apple, the recall organizer Joe Tomasone, AB2B has submitted a second recall petition to League Headquarters. This one reportedly contains more than twice the required number of signatures for a recall election to be initiated. ARRL headquarters staff is in the process of verifying the authenticity of the petitions signatures. The first attempt to recall Buoniuto took place last year. It fell several signatures short of the minimum needed to trigger a recall vote.

(Via Newsline)

<*>

Raft carrying ham radio lost at sea

Tragic news from the Far East. According to Vernon Eubanks, HL9VE, word from South Korea is that all hands aboard a research raft carrying ham radio station HL0JQT were lost January 24th in heavy seas off the coast of Japan. The bodies of three of the crew members had been recovered, but a fourth was still missing in the frigid waters. He is presumed drowned and lost at sea.

Japanese Maritime Safety Agency authorities report that they had responded to a distress call from the raft. It's not clear if the request for assistance went out on Amateur Radio frequencies or maritime channels. The 23 foot research raft was attempting a voyage from Vladivostok, Russia, to Pusan, South Korea, when it capsized in stormy seas. News reports say that the four man crew was attempting to retrace the sea route linking Palhae to the Korean Peninsula.

(Via HL9VE, ARRL, others)

<*>

TV channels 60-69 reallocated

The FCC has reallocated television Channels 60 to 69 to other services. TV channels 60 through 69 operate from 746 to 806 MHZ. The FCC says that this transfer of spectrum will help alleviate a critical shortage in public safety spectrum needs.

(Via FCC release)

<*>

Westminster pirate on 88.7 MHZ

Another unlicensed broadcaster may be on the air in California. Jim Garrett, WA6YOS, reports in the CGC Communicator that he saw a sign in a church parking lot that read in the city of Westminster that read:

"All welcome 88.7 FM Sunday in-car worship".

So WA6YOS says that he tuned around 9 AM on Sunday morning. Jim says that he heard live Christian music followed by hum, clicks and other public address system sounds. Then, everything was shut down.

WA6YOS says that the signal was full quieting about half a mile from the church. It was so strong that it captured KSPC FM and two other out of area legitimate signals he can often hear on 88.7 MHZ.

(via CGC Communicator)

<*>

Newsline server down

This note to those of you who have e-mailed asking where the Newsline home page went to on the world wide web. Actually we are still there in cyberspace, but a technical failure with the server in the Minneapolis area had us down for a few days. According to our Webmaster Dale Cary, WD0AKO, it will be back at its usual address in a few days if its not there already.

(via Newsline)

<*>

ARRL Membership stats

The ARRL has released its latest membership statistics. As of December 31, 1997, the ARRL had 171,944 members. That's down slightly from December 1996.

By the way, the president of the American Radio Relay League has a new vanity call. Rod Stafford has turned in his well known KB6ZV for a far simpler, W6ROD.

(Via ARRL)

<*>

WRC-97 in QST

WRC-97, An Amateur Radio Perspective, is the title of an excellent article By Larry Price, W4RA and Paul Rinaldo, W4RI appearing in the February issue of QST Magazine. The article details the conference matters important to radio amateurs. It also explains why certain issues were or were not acted on by the worlds communications regulators.

Price and Rinaldo write from a perspective that only those attending the conference can share. Rinaldo was an actual member of the United States delegation while Price attended as Secretary of the International Amateur Radio Union. Their story is must reading for anyone truly interested in the future of Amateur Radio.

(Via Newsline)

<*>

Hamvention changes

Some major changes are taking place at this years Dayton Hamvention. There will be more exhibit space, easier handicapped parking as well as a concert at the banquet. We have already told you that Country legend Ronnie Milsap, WB4KCG will hold the concert.

There's some old and some new for 1998.

"Well, yes and no. It's always the same old stuff. Lots of radio stuff. If you can't find it there, you probably can't find it anywhere. The fleamarket has some changes. It will be easier to get into. There will be better parking for ADA compliance parking for them. It's just going to be much easier to get into.

Then the information services will be better. Instead of having one spot you have to go to find information, there will be four spots and a couple of roaming people." Dick Miller, N8CBU

That is Hamvention General Chairman Dick Miller, N8CBU. Soon the new stuff includes the website at

www.hamvention.org

Just about any information you need is on the website. Information about tickets, passes, lodging, who to contact if you need help.

What is probably the biggest change is the Hamvention Banquet. This year not only is it moved, it's not just a banquet.

"We have moved it to the Nutter Center which is the arena at Wright State University. One of the major reasons for moving it is it is much easier to park. There is no charge for parking, it is much easier to get in. It is ground level, there is no steps or ramps to go up or down. No escalators, just walk right in on the banquet floor and there you are. The banquet will be on the main floor where they play basketball, hockey and that kind of thing. And there are 8,000 seats up, around like any arena would be. About 8,000 seats. And we will have the opportunity to have Ronnie Milsap in concert. He will also speak about Amateur Radio. But he will be here in concert. It's the first time we have done this and we will have general admission available for the folks who don't want to go to the banquet, but wanted to see the concert." Miller

May 15th, 16th & 17th is Hamvention weekend this year. It promises to be a great time for all.

Again the dates for Hamvention '98 are May 15th, 16th and 17th at the Hara Arena in Dayton, Ohio. Newsline will be at the Hamvention to host the 2nd Annual Ham Radio Town Meeting and provide coverage of it in RealAudio over the world wide web.

(Via Amateur News Weekly)

<*>

Young hams needed for WB2MGP Hamvention Youth Forum

Still with Hamvention '98, educator Carole Perry, WB2MGP, says that she is in the initial planning phase of her annual Youth Forum on May 16th and needs young hams to be in it:

"I am once again looking for articulate, enthusiastic young speakers 18 years of age or younger who are licensed Amateur Radio Operators and who are involved in something super interesting or have done something a little bit out of the ordinary or very exciting that they would like to speak about at the Dayton Youth Forum." Perry

If you are a young ham under the age of 18 and are planning to be in Dayton on Saturday, May 16th, or if you know of a young ham that would make a good forum presenter please contact Carole directly. Her telephone number is:

(718) 983-1416

and she is available most evenings Eastern time. If she is not there please leave your name, phone number and the best time for her to call back. Or you can send e-mail to her at:

wb2mgp@ix.netcom.com

(Via Newsline)

<*>

Names - NFCC

Some names in the news. We start with word from the National Frequency Coordinators Council that the group has completed its second directors' election and the new National Frequency Coordinators' Board election. Those that have won office include Whit Brown, WB0CJX; Clay Freinwald, K7CR; Dick Isely, W9GIG; Dave Shiplett, AC4MU and Owen Wormser, K6LEW.

The NFCC also has a new Board of Directors. Some of the names are the same as those serving on the frequency coordinators board. They are Dick Isley, W9GIG as President, Whit Brown, WB0CJX as Vice President, Clay Freinwald K7CR as Secretary and Dave Shiplett, AC4MU as Treasurer.

Under the amended bylaws, these officers will serve until the next NFCC Directors' Election to held in September.

(Via NFCC)

<*>

W2GZB receives March of Dimes Award

An Andover, New Jersey amateur operator has received a prestigious award from the March of Dimes. On January 12th Daniel J. Murphy, W2GZB, was presented the philanthropic organizations Franklin Delano Roosevelt Award in recognition of his volunteerism.

Murphy, a former president and an active member of the Sussex County Amateur Radio Club. He routinely dedicates himself to many facets of the hobby including volunteering for public service activities.

(Via Hudson Div. Look, ARRL, others)

<*>

Ham Radio mercy adventure

It was a mission of mercy and an adventure for hams who traveled to South America to deliver critically needed medical supplies.

What began as a medical supply mission to Central America turned out to be in adventure Indiana Jones could have died for. Indianapolis Amateur Radio Operator John Hascal, W8JON drove over 6,200 miles this past summer to deliver medical supplies to a needy clinic in the country of Balize. Johns Land Rover was equipped will HF and APRS equipment so he was able to send his position and talk with friends and family back home.

During his two week trip John encountered armed federal troops giant mosquitos, and angry crocodiles.

Jack Parker is a news cameraman for WISH television. He was there to record the entire expedition.

(Via Amateur news Weekly)

<*>

Hacked library

Hackers could be to blame for last years twelve day shutdown of a library computer system in Washington state. According to reports on Usenet, the library director in King County says the cause of the failure remains unknown but there doesn't appear to be any problem with the hardware or the software.

He says there's a real possibility of external intervention. During the shutdown, more than 500,000 volumes of books, movies and musical recordings remained on shelves because they couldn't be checked in. Anything checked out had to be logged by hand.

(Via Internet)

<*>

Mass Ham Radio balloon launch success

Another ham radio balloon launch success. N1LTV reports that a tiny expendable 2 meter beacon was carried aloft on a balloon in Massachusetts on December 9th. Called PCIS 1, the balloon rose almost straight up and then took off to the north. Visual contact was maintained for about 20 minutes.

N1LTV says that he heard the beacon signal just minutes after launch using only an unsqelched 2 meter FM handheld connected to a four element beam. 15 minutes later, all he needed was a rubber duck antenna.

(Via N1LTV)

<*>

Israeli Satellite launch fails

An Israeli booster has failed to place their Ofek 4 satellite into orbit. The launch took place at 13:00 UTC on January 22nd. Israel Aircraft Industries which is part of the Israeli space program, have not released any details on the failure. No amateur payload was on board.

(Via published news reports)

<*>

Alaska VHF Beacon needed

With the VHF DX season hating up faster than expected, a need has arisen for six and two meter propagation beacons to be installed in Alaska. To help facilitate this, Brandon Anderson, N8PUM, says over the VHF Reflector that he will donate a built and programmed keyer circuit to anyone in Alaska wishing to place a 6 or 2 meter beacon on the air.

Anderson says that his 50.0665 MHZ beacon was heard from grid square EN65 to Alaska last January off the Aurora. He says that a beacon on the Alaska end would be nice for everyone. Any comments or suggestions go to

n8pum@juno.com

(Via VHF Reflector)

<*>

DX

In DX, F8EN, will once again operate from Gabon as TR8CR starting on February 5th for 5 weeks. He will be active mostly on CW. QSL via F6AJA.

(Via The W5 DX'er)

And HB9HFN says via OPDX that he and HB9DLZ will be active from Tonga though February 10th. They will use the callsign A35LZ and A35FN. Their next stop will be Western Samoa from February 10th to the 23rd with the callsigns 5W0LZ and 5W0FN. They will be looking for Europe and mostly on CW on 80 through 10 meters. QSL via their home calls.

(Via OPDX)

And AA1M, W1HL, KA1MID and W1USN have announced plans to vacation and operate from Antigua from February 23rd to March 2nd. They currently have not yet been issued callsigns. QSLs can be sent direct to each operator or via bureau.

(Via e-mail)

<*>

John Johnston W3BE retires from FCC

And finally, word that one of the best known faces and voices in ham radio has retired from an illustrious career with the FCC that spanned almost three decades. On January 30th, John Johnston, W3BE, announced his retirement from the regulatory agency, effective immediately.

Johnston began his FCC career on February 14, 1972. This, when he replaced the retiring Bill Grenfell, W4GF, as Chief of the Rules and Legal Branch of the Amateur and Citizens Radio Division serving under then Division Chief A. Prose Walker, W4BW.

John's title changed many times since then as the FCC has gone through various reorganizations. His last position at the Commission was as Special Assistant for Personal Radio Services to the Public Safety and Private Wireless Division. Back in 1991 while Chief of the Personal Radio Branch he was named to receive the Amateur of the Year Award by the Dayton Amateur Radio Association. He was given this highest honor in ham radio in recognition of his lifelong dedication to the service and for his years of effort in re-writing and modernizing the Amateur Service Part 97 Rules.

John B. Johnston, W3BE, devoted almost three decades to serving the both Amateur Radio and the public trust. He is a former ARRL Assistant Atlantic Division Director, a past president of the Frankford Radio Club and also authored several articles for QST magazine. His retirement brings to an end a very special era of discourse between the ham radio community and the Commission. No successor for him has yet been named. Until one is, Bill Cross, W3TN will be handling the day to day Amateur Radio related matters

at the FCC.

And if we may be entitled to a personal note. We at Newsline wish our longtime friend John Johnston, many wonderful years of retirement, of happy hamming and simply enjoying life. He has truly earned it.

BWAHHAHAHAHAHAHHAHAAAAA! As I have told some people in email responses, I did actually think about taking the magnetron from the old Amana RadaRange that came with my house, rigging up a wave guide from some old stovepipe and BWWWWWAMMMPP! Instant EMP weapon!

"Thet commie Clinton made my bowells sieze up and made Kentucky lose the big game and... Hey! Mah hahr is on fahr!"

Unfortunately neighborliness calls for forbearance in cases where the offender is not causing me bodily harm or interfering with my livelihood.

I have gotten many helpful and many funny responses from lotsa folks! Thanks for all your help. (And _no_ dammit! I ain't-a tellin' the FCC on her! She is merely interfering with my Simpsons habit, not shutting off my pacemaker! I have this weird thing about not calling in the fuzz at the drop of a hat!)

Thanks again!

> Ham radio is already dead or at least started to die.

Amateur Radio isn't dead but it will die a natural death. Even now the figures are inflated with 10 year licenses. A lot of those OM's are dead but still on the roles. When is the last time you QSOed a teenager. Maybe one or two at most. When I got my ticket in 57 teenagers were a large part of the population. But at that time you could build your own or get cheap surplus gear. Also it was the only way to talk to the world and meet others with the same technical interests. If the Internet existed then I doubt that I would have taken the trouble to learn the code when for $20 a month I could do all above and more. Prediction: If ham numbers do increase then it will be more of the CB type ops with no technical interests in radio but just like to chat. But I predict the numbers will continue to decrease and the hobby will die slowly. The manufacturers will pull out as sales decrease.
Another reason many hams are leaving is the present level of garbage that is on the bands that mirrors these ham newsgroup pages and makes people like me licensed 40 years now afraid to post my call because of the threats ect. I now work all CW which is still clean and friendly but most all the guys there are in their 60's and up so that is thinning out also as they become SK's. I'm just glad that I was able to enjoy the years I've had. 73 Len

If it is a new radio, I would take it back to the dealer.

If it is a used radio, it looks like someone got into it and started
tweeking. Maybe that is why they sold it.

Unless you are familiar with the radio, I would suggest taking it to a
local, dependable, dealer and consider the realignment costs as part
of the purchasing cost.

I don't think hf cw will be dropped, within the forseeable future:

(a) because there have been too many instances where cw, in the
amateur service, has proven it's value.

(b) too many amateurs, after getting their nocode licence, eventually
, within a reasonable amount of time, do pass the cw exams and upgrade

their amateur licences.

(c) the code requirement, and the amateur exam overall, is not a
requirement which is beyond the ability of the average person.

>service/hobby/etc should hold ourselves to a "higher standard".

Hello Eric,

Your problem is not unique. I've seen the same problem in almost every
city I've ever travelled to.

Quite frankly, the problem seems to be with hams that have the "service
versus hobby" mentality. Those hams that see ham radio as a public service,
a-la a radio "peace corps", where you help provide emergency comms, enhance
technical abilities, improve communication skills, generally tend to have
more respect for the rules and the "importance" of ham radio.

On the other hand, many of those who merely view ham radio as a "hobby",
a cheap way of staying in contact with friends and family without an
expensive cell-phone, and so on, usually have little respect for the rules.
Why should they? They don't view amateur radio as anything important,
just another CB radio service.

Ultimately, you can usually determine the type of ham someone will make
when you analyze how they view ham radio.

I do not post my real name because I do not feel like having harassing mail
and derogatory "QSL cards" sent to my house. With this in mind, and considering
the fact you've done a QRZ database search yourself, do you think I'd be stupid
enough to use my real name when omitting a callsign?

Now, on the subject of hams who are worthy of respect. Some are and some
aren't. One in particular was an olde farht that was as die hard about
operating RTTY as some of the beepers are about operating CW. In the
early 80s before packet became popular, he would bug anyone who had RTTY
capability to get on the air. If you'd check the local RTTY mailbox
on two meters, he'd engage you in a QSO as soon as you signed off.
He'd get pissed later on if you didn't answer him and would confront
you if he saw you at the next month's club meeting. No one respected this
guy, and he eventually faded into the woodwork.

The U of Maryland's 2m repeater antenna is in immediate need
of renovation. The noise being generated is terrible, and
we've been informed by the manufacturer, DB, that it's
very likely due to corrosion occurring near the phasing harness.

Unfortunately, it's about 22' tall, on top of a 50' tower on
top of a building.

It's not light. It was put up in 1990 with a gin pole.

It must now come down and back up with one.

The assistance of an operator knowledgeable in its use
would also be greatly appreciated.

Thanks in advance!

Rambo the reason you don't understand what the poster is saying is because he talks about things like:

Respect, importance of ham radio, and public service.

Since these things have no meaning to you, your unable to understand the posters point. By the way he never once mentioned amateur radio as 'a way of life'. Now go play on 11m, and tell all your buddies how screwed up ham radio is. Perhaps you can discourage them from joining.

Tim

> test ?
>

The simplest possible answer is: Because it is necessary for you to
know "theory" as well as rules/regs to be competent to operate a
transmitter (competent = have some clue as to how to recognize and
prevent improper operation that could cause danger to yourself of
others or cause interference to other services).

Besides, ham radio is *supposed* to be a technical endeavor,
comprised of folks who are actually interested in learning about
how/why radios work, building, experimenting, etc.

Unfortunately, the ARRL has, for the past several decades, perverted
ham radio into a playground for competitive electronic paintball wars
games that merely use radio as a playing field. They have promoted
contesting and DXing to the point where they are perceived as the true
purpose of ham radio by many and have de-emphasized the technical aspects
because the "leadership" is predominantly a bunch of technically ignorant
nincompoops who are only interested in maintaining their positions of
"power" and "status" and the status quo, regardless of the costs ... oh,
I almost forgot the (other) "prime directive" ... sell magazines, books,
and "study guides" to make more money ...

Try to find someone who can lend you a clue as to what ham radio is
REALLY supposed to be ... the crap the ARRL promotes is NOT it!

To this point, you were doing OK ...

> Actually the RULES & REGULATIONS are what is MOST
> important when getting a license to use Ham Radio transmitters, the
> THEORY part is really not neccissary, but is at least usefull and
> helpfull.

Of course the rules/regs are important, but without the theory knowledge
one can't possibly be assured that one is compliant with many of the rules.
This is where you lose track of things ...

> The Morse Code part is really only one of the many ways some
> choose to USE Ham Radio, and should not be singled out and made to be a
> requirement at all.

Agreed on this point ...

>
> Not knowing how to use Morse Code will not cause you to interfere or
> improperly use your Ham Radio equipment.

Also agreed on the above ...

> You may make the same argument with Electronic THEORY to a point, but it
> actually could help you to operate within the legal restrictions better
> than if you didn't know it.

The argument does NOT apply to theory ... that is where you and many others
start to lose touch with reality ... without the theory knowledge, one is
COMPLETELY reliant on the rice-box manufacturer to produce a rice box that
will NEVER fail or drift out of spec ... that is, of course impossible. That

is why the commercial mobile radio folks, for example, are required to use "type accepted" equipment (MUCH more expensive than ham gear for similar frequency ranges and power levels, and much more restricted in the features and flexibility of operation that the user is allowed to access.)

Now, I will be amongst the first to state that there are many current hams who are so technically ignorant that they *should* be restricted in their ability to tune and twiddle with their gear, but I would hasten to add that enacting such a restriction would be a VERY BAD THING for ham radio as a whole and would hog-tie us even further WRT having any ability to experiment and contribute to our own advancement.

A far better solution would be to re-emphasize the technical side of ham radio (as opposed to the mindless gaming side) by making the written tests better and by eliminating the code test (or at least reducing it to 5 wpm for ALL classes of license) to allow the necessary growth and make it more attractive to those who are already far more technically proficient and knowledgeable than the vast majority of current hams, but who have stayed away in droves because of the 2nd class citizen treatment they get from those who believe that "only beeping skill makes Real Hams."

It's a pretty big stretch to call a simple list of links to other web
sites "intellectual property" ...

The point is still WGAF?

> >
> Bill:
> So you deny that neither you,nor someone in your family, will directly
> benefit from removing the code requirement?

I think it's safe to say that EVERYONE will "directly benefit from
removing the code requirement ... ham radio will grow, more technically
competent folks who have been turned off by the antiquated mindset and
overt discrimination against "2nd class (no-code) hams" will join and
contribute, and we will stand a chance of keeping our bands and priveledges
into the coming century ...

I doubt that Bill will "directly benefit from removing the code requirement,"
since he's already passed a fast code test and has substantial HF priveledges.
If "someone in his family" (or the kid down the street, for that matter) ends
up becoming a ham because more sensible, relevant "requirements" for licensing
are enacted, so what? That's a "good thing" ... not some sinister ulterior
motive as you imply ...

It's been commented before here by some that "they've never seen a hobby group
so intent on keeping others out and that other hobbies/clubs actually try to
promote their interest and draw others into participation" ... this observation
is (unfortunately) true ... hams (on average, as a whole) are probably the most
crotchety anti-social, inbred, narrow-minded, isolationist, olde fartz group in
the world ...

It's truly amazing how fast and widely the "*I'm* in, now quick lock the
door before everybody else comes in and 'messes things up'" mentality seems
to spring up in hams.

What I say is what you get ... in other words, *my* "agenda" is simply what
I say it is ... not any "sinister" or "selfish" "ulterior motive" that you
try to conjure up in your attempts to resist necessary change.

If it's "selfish" of me to want to see ham radio survive into the coming
century for my 3 grandsons (who are still far to young to even think of
becoming hams) and others, then maybe I *am* (a bit) selfish ... but I
don't think that's a "bad" selfish ...

There is no "lofty ideals BS" as you put it ... it the "ideals" look
"lofty" to you, maybe you're starting to see some hint of reality instead
of your jealous hatred of anyone who suggests that licensing requirements
need to be changed from what *you* had to go through ...

As usual, Mike, you insinuate a LOT of BS with NO basis in fact whatsoever.
(In fact, your assertions are, as usual, exactly CONTRARY to the facts.)

I find it amusing that you use the "Baby Steps" reference ... YOU act
about as rationally as "Bob" (of "What About Bob?") in your quest of hatred
against anyone who suggests change is needed for the betterment of ham radio
..

I have REPEATEDLY stated my personal promise to NEVER seek to ban the use
of Morse on any frequency assigned to the ARS ... I really don't care if
you believe me or not ... it's not "my job" to please you or convince you
of ANYTHING ... fortunately, YOU are NOT the one who will make the
determination, and with the irrational way in which you present yourself,
I doubt you'll have much influence on the regulators at all ...

955. Popping Some More Caps Into The Fuddy-Duddy's Argument

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-08 00:00:00 UTC
From: nospam@nospam.com
Message-ID: <34dffdb8.175272471@nntp.a001.sprintmail.com>
Source record: 178964

The fuddy-duddies are really getting up tight. This is a good thing!

TO summarize, we proposed leaving the code requirement for a path to
the higher license classes, and adding another technical path.

Well their first argument is that there is a hidden agenda, instead of
promoting growth of the hobby.

From yrac@aol.com:
>So you deny that neither you,nor someone in your family, will directly benefit from
removing the code requirement?

>Answer this one
>question: How would YOU personally benefit from having the code requirement
>dropped. Put your agenda on the table and let folks know where you're coming
>from!

Most hams know the best way to get their family on the radio is GRMS.
Some hams even take the trouble to put up GRMS repeaters.

The next line of the fuddy-duddy code of rules and regulations is to
call you lazy, a whiner, childish, or somehow "defective".. They want
to make you feel bad about yourself; they want to make you feel guilty
for attacking their sacred cow. They try and convince you your views
are in the minority or weird. Skip ahead to the end of the article
for a response.

>The code is required to obtain the license for HF. How simple can we make it?

>If you fellows compare how much easier it is to get an Extra license today, you
>should hang your heads in embarrasment. Young kids are doing it, for gosh
>sake.

>Gosh! I hope as you move into the hobby some day, you take some time to learn
>about its past. Your ham experience will be much richer if you do.

>When they first brought this discussion over here, their arguement was that
>nobody uses CW any longer. There was a chorus of folks who told them they were
>wrong.

>Next thing we'll see in
>this thread is the hypothesis that CW requirements are a conspiracy of
>Jewish bankers. I guess Darwin was wrong, if you know what I mean.

Then the fuddy duddies try some logic!

>We could change the requirement to having to stand in front of the radio club in your
underwear and reciting the Amateur's Code from memory and it would accomplish the same

>purpose: If you wanted a ham license, this is what you would do.

How about walking down the streets of Newington naked at high noon, eating a broiled chicken? I expect many of you will refute this, on the basis of arranging transportation to Newington.

When other means of defense are non-existent, we get a little compliment, and a "go-away now":

>Just stop trolling over here. You've heard how the folks in this NG feel about
>things--and by the way, there have been some excellent remarks on both sides.
>So enough, already! Take it to .policy where you will find plenty of folks who
>will chat with you on the subject of Code Examinations.

LETS LOOK AT THE FACTS!

(From the ARRL Web Site;)

The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose as expressed in the following principles:
a.Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications.

[We all know the code is not by the ITU as a basis for emergency communications]

b.Continuation and extension of the amateur's proven ability to contribute to the advancement of the radio art.

{Hmmm......instead of spending months learning the code as an incentive to get more privileges, I could study some interesting and enriching topics about radio theory. Just how much bandwidth do I really need to get an intelligible voice signal through?}

c. Encouragement and improvement of the amateur service through rules which provide for advancing skills in both the communications and technical phases of the art.

{ Ok fuddies--to prevent a long thread (again) about whether morse code has any merit as a communications form--I will give the point to you. Lets say it does, although one of you has already admitted it does not. Now read the second part of the item above. Read the summary at the top of this post}

d.Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronics experts.

Electronics experts? Imagine that! I thought that if I wanted to progess in the service, I would not have learn all that technical stuff.

e.Continuation and extension of the amateur's unique ability to enhance international goodwill.

[Well Louie, them no coders are sure silly, by the way, I got that Antartica station on the net last night. It was really quick, I slid in between two stations in Canada. Took all of 5 seconds. Soon I will have worked all continents,]

OK FUDDIES, now instead of attacking my "blather" or "testicular fortitude", do you want to reach a consensus?

Or maybe someone will re-petition the FCC to investigate what parts of the Fundamental Purpose are being ill-served by a code requirement?

956. Re: Annoying CB'er!

Well Douglas, the laws for CB are quite different fron those governing Ham radio. CB radio is limited to 5 watts. Typically CBers who interfere with TV, Stereo etc are running more than the legal output. Hams can legally run up to 1500 watts but generally have enough engineering sense to control spurious outputs that cause TV interference. In my 6 years of operating ham radio, I've NEVER gotten into someones TV, so it is possible to operate without interference. Since this is a CBer the law will be on your side if illegal power levels are used. If this person does not back down on the mike and/or power levels, you should try to solve the problem diplomatically. Most hams would do this. Most CBers don't know what the heck to do. If there is no cooperation, call the FCC. The problem will magically disappear.
In the case of ham interference, hams will usually put a low pass filter on their rig and advise the other person to put a high pass filter on the TV. Go ahead and put a high pass filter on your TV. If this doesn't work, suggest to this person she put a low pass filter on her rig. Again, if there is no cooperation, call Uncle Charlie(FCC).

958. P.C. Magazine Advocates Breaking The Law

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-08 00:00:00 UTC
From: n2tkx@aol.com
Message-ID: <19980208191900.OAA15310@ladder03.news.aol.com>
Source record: 178967

The following is an exerpt from an article that appeared on page 48 of the March 1998 issue of POPULAR COMMUNICATIONS magazine:

"On the other hand, there are some operators who have been anxiously anticipating the arrival of Solar Cycle 23. It is particularly good news for SSB operators who participate in the Freehand; that segment of frequencies between CB channel 40 and the 10 meter amateur band. For them, increased skip opens numerous opportunities for long distance (national and international) communications. In the very near future, though illegal, Freehand operation will be better and more exciting than it has been for years!

As surely as Solar Cycle 23 is underway and as certain as the increased skip and noise levels it brings will drive many of you from your radios, at least some of you will be tempted to experience the intrigue and excitement of the Freehand. If you do, remember ... it is illegal! Also, remember that while illegal, it has rules. Further, you should learn and then comply with these rules. If you don't, you could find out that poor operators have a tendency to 'get caught.' If you do learn and follow them, you should soon find yourself enjoying hours of stimulating radio. The following letter is offered in hopes of getting those 'who will' off on the right foot."

The theme of the article seems to be "it's illegal, but here's how not to get caught." Give me a break! I don't think that there's anybody who believes that everyone who operates CB obeys 100% of the rules 100% of the time. But a major magazine advocating the best ways to break the law and not get caught?

By the way, here are a few contact points:
Ed Baranat, edbarnat@global2000.net, author of the article.
Harold Ort-N2RLL, PopularCom@aol.com, editor of POPULAR COMMUNICATIONS.

Tom Kneitel-K2AES, k2aes@juno.com, Senior Editor of POPULAR COMMUNICATIONS.

What brand of radio?

Without knowing the specifics I can only make broad suggestions.

Does the final heat up? I'll assume you were running the unit into a dummy load for testing and so I wouldn't think if the unit has VSWR protection that it would be kicking in due to problems at the antenna. If the final is getting abnormally hot then some type of thermal protection is kicking in to reduce the power output. The same may be true if there is a provision for detecting abnormally high VSWR. The protection circuit is kicking in to reduce the output power in order to save the final. Its possible something in the protection circuits is failing.

I'm assuming the warranty is up or you woulda just sent it for service. If thats the case and you feel comfortable opening up the unit I would suggest a close inspection starting from the antenna connector and working back to all the components in the area and on the board where the antenna wire runs. I would look at the PC board traces and components for signs of overheating. IF the problem is thermal then spraying some component cooler on each component in the area may help you isolate the problem part. If something is burnt or melted its probably bad. The thing is that just finding the bad part and replacing it won't always be the happy ending. You also have to ask yourself why that part overheated in the first place. If you don't find a cause for the failure then simply replacing the part will be a temporary solution at best.

Good luck.

magazine advocating the best ways to break the law and not get caught?

Uh, excuse me. Last time I checked, there was freedom of information in this country, as well as freedom of the press. Pop Comm is simply telling it like it is. A large percentage of their customers are interested in Freeband radio, so it would only make sense that they publish some articles which depict the hobby in a positive and factual light.

Sorry, HAMBOS. Freeband radio is a reality, with many more active participants than you'll ever find on 10 meters. Get used to it! Soon, the cycle will be up and running, and the upper 60% of 27Mhz will fill with Freebanders. That's the way it is. Don't like it? Too bad. Attempting censorship on magazine articles which deal with the subject will do nothing to deter or decrease Freeband operations.

Lumpy,

You mean that in Colorado when everyone else is without power that
the Pizza Hut is still open. When no one else can buy gasoline the PH
drivers can. When no one else can navigate on the streets the PH drivers

can ??

That tells me that for your sake, I hope the PH guys are in charge of
Emergency Preparedness. You sure don't seem to have a handle on it.

Who sez? Not Part 97.1. 97.1 lists 5 different purposes. 3 of them
deal with the "art" of radio (communication) while another 3 (one
overlaps w/ both definitions) deals with specific "technical"
pursuits.

>Unfortunately, the ARRL has, for the past several decades, perverted

Some quotes from Masataka Nodas "Study Guide for Amateur Radio Basic Qualification" I'm afraid that the Canadian offices that handle amateur applicaitons may be overloaded once this sort of detailed radio study information hits the public.

"Transmitters:

-With a transmitter, you are able to transmit your signal to the air.
-The microphone at the beginning, the antenna at the end

-After the microphone, we want to increase the signal... use of amplifier
-Before the signal reaches the antenna, we want to increase the signal... use of amplifier."

"Recievers:
-With a receiver, you are able to receive the signals on the air
-The antenna at the beginning, the speaker at the end
-After the antenna, we want to increase the signal... use of amplifier.
-Before the signal reaches to the speaker, we want to increase the signal... use of amplifier."

"Power Supply:

-Transformer... reduces the voltage, Rectifier... converts AC to DC, Filter... regulates the voltage"

A better question would be "why?" Surely there already exists a 10m beacon somewhere in your region of Canada. Why park a transmitter and monopolize yet another 10m freq'y?

A 1750m beacon would be *much* more useful for studying (LF) propagation. Please consider installing one on that band (if Canada does in fact have 1750m privileges).

I'm of the opinion that operating a beacon when others are nearby feeds the same egotistic satisfaction as placing a rptr on their air when there are others already serving the same region and going unused.

Sorry. I don't buy it. The test already has been simplified to the point that you can "guess" the answers to the questions--even if you can't copy it solid.

I sincerely doubt there are that many would-be hams for whom code is the obstacle. Yes there are some, but it is not the large number you suggest.

The number seems significant to you because you have some personal stake in the matter, perhaps. Collectively, the anti-code arguements in this NG must amount to dozens of hours of typing responses.....one has to think this is a life-or-death matter to you.

Tell us what makes it so, Carl. As with the others, I challenge you to drop the "lofty ideals" BS and put the real agenda on the line. Otherwise, your goals sure look selfish.

The pro-code crowd says that without CW the HAM bands would become just
like CB. I don't believe that but without a theory test it would, at least
in one way. Just listen to CB and you will here lots of very poor sounding
radios, overmodulation and adjacent channel splatter. This is due to people
"tuning up the radio" without a clue what they are doing. When they're
radio sounds like crap they don't know why but just figure "its loud so its
good".If nothing else, theory testing encourages people to know enough
about what they are doing to avoid those problems. Even if a HAM opperator
does not know how to fix the problem he should know enough to get fixed.

Because of the way the law is written.
I don't mean that the law says you must. I mean that the laws on how amateur radio gear is built differs from the way most other radios are built, in that the FCC has strict control over how those other radios are built, while amateur radios don't have the same acceptance requirements. This means that amateurs are free to build their own radios for use in the hobby.
Along with that freedom goes a responsibility; you must know at least the rudimentary basics of radio theory.
The fact that you don't intend to excersize that freedom does not exempt you from the responsibility that goes with the hobby's freedoms.

Bill Sohl (K2UNK) holds the Advanced Class license.
Carl Stevenson (WA6VSE), his buddy, is a Tech Plus.
Readers can draw their own conclusion.

When they first brought this discussion over here, their arguement was that nobody uses CW any longer. There was a chorus of folks who told them they were wrong.

They dropped back to the premise that CW is an out-of-date mode and has no relevance in today's Amateur work. They were reminded that CW is used extensively, even at VHF (where there are lots of No-Code licensees). We certainly hope that Bill, who claims ARRL membership, took the time to read the article on page 86 in the current (Feb) issue of QST, where this is discussed in great detail.

Now, the No Code gang claims the lofty goal of "fixing" the license requirements for the benefit of humanity. Pardon me, guys. You want to "fix" it for your own personal benefit, and not whether it will enhance ham radio as a hobby. As part of the fix, you want to kick up the technical exam in scope, which will act as more of a filter than CW !

Speaking for myself, I'm tired of the bitching and moaning over the code element of the examination. I moved up from a Novice license in 1961 to Amateur Extra in 1963. Back then, there was no incentive licensing, and no "special" frequencies for Extra's. My motive wasn't "clear frequencies, to keep for myself" (as you claimed in an earlier posting). I did it as a personal advancement thing. I had to be a ham two years to qualify to even TAKE the exam, and I had to draw my own schematics and copy a full minute of code in front of an FCC examiner. I also took a sending test in front of "the man". Talk about intimidating.

If you fellows compare how much easier it is to get an Extra license today, you should hang your heads in embarrasment. Young kids are doing it, for gosh sake. How can you even think this is an impediment to the growth of our hobby? When I got my Extra, there were only 3,000 other Extra's in the USA. Look at the numbers, today.

Take this thing to the NG specifically organized to discuss this topic, and talk it up to your heart's content. Compare the ham test to the driving test as much as you want. Along the way, do something constructive, like writing to folks who have the authority and influence needed to make the changes you want.

Just stop trolling over here. You've heard how the folks in this NG feel about things--and by the way, there have been some excellent remarks on both sides. So enough, already! Take it to .policy where you will find plenty of folks who will chat with you on the subject of Code Examinations.

>Now, the No Code gang claims the lofty goal of "fixing" the license
>requirements for the benefit of humanity.

Along the way, the Anti-Code promoters claimed that the Extra's only wanted to keep the code so they could keep their frequencies "clear". When several people pointed out that there are Extra's around the country helping folks get licensed and/or upgrade, NoCode/NoLicense and his buddies dropped THAT subject like a hot potatoe!

I had to laugh when I read the Daily Devotional for today. It said:

Sunday, Feb 8th
Are You A Complainer?

There's a story about a farmer who was known for his negative attitude. One day a neighbor stopped by and commented on the farmer's wonderful crop. "You must be extremely happy with this year's harvest," he said. The farmer grudgingly replied, "Well, yes, it looks like a pretty good one, but a bumper crop is awfully hard on the soil."

if not fun, what is it ?? huh ?? no wonder why you don't
attract many people.

> However, the Amateur Radio
>**Service** is just that -- a service.

yeah, emergency service is also a part of it, but pro-CWers (Montreal
area) didn't help us during the ice storm in Montreal. they just
hate voice and they couldn't do anything about it.

what kind of service are you referring to ?? emergency ?? public ??
community ?? most of the things are handled by voice you know ??

don't even think of CW communication during the triathlon (public
service).

>when the normal channels of communication are disrupted.

what's normal channel ??

> This
>means we need to retain, practice, and pass on the most
>important electronic communications skill of all --

Horse poop. Many communication positions are open *only* to volunteers.
I'm a communication volunteer for Oahu Civil Defense - there is no
equivalent paid position, and I wouldn't want such a position even
if it existed. (My regular paycheck comes from teaching mathematics.)
As a volunteer, I go to work only where there is an impending emergency
involving the County of Oahu (hurricane, tsunami, flash flood, aircraft
accident, et cetera). Exciting work for a volunteer.

On the other hand, paid full-time dispatchers (and DJs) are educational
losers locked in dead-end jobs.

>"Where's that big 'ol CB RAMBO??"
> "I wanna hear him TALK TOUGH!!"

There are 13 capitalization errors in those two sentences, and the
quotation marks make it appear two different people are talking about
you. Is that what you intended?

I have been reading this newsgroup for the better part of 3 months. One thing is obvious to me. BOTH groups need to stop your bickering and work together to find a solution to your problems before YOU BOTH ruin this hobby for everyone. I was very hesitate to even go take my test to enter into this"feeding frenzy" that supposed to be a hobby. How are the other future hams feeling right now? Will they want to join? Can or will anyone show them what and how to do it? IF THEY DON'T JOIN, OUR HOBBY IS A GONNER!!!! Yes I'm a No-Code now (passed yesterday), but because I would eventually like to use HF, I am studying the code and will upgrade, to allow myself the opportunity to use other modes and frequencies of communications, to LEARN and EXPERIMENT with what we are allowed to use! Isn't that why we ALL joined into this hobby? Sure the No-Code's have an easier time getting into our hobby than the old timers did. So what, times have changed, alot of stuff is easier now-a-days than it was 30 years ago. Get over it or get off your butts and elmer someone, show the no-codes that CW can be enjoyable and can serve a purpose. Invite them to you shack, let them listen in and watch while you QSO with Africa and Japan. All they hear now is the bickering, you think they want any part of that? Teach them, elmer them as you were probably once elmered. You'd probably be suprised at how they will respond. No-Codes open you minds to new opportunities and experiencies, learn what they can teach you. You may very well be suprised as well by what they know. They may or maynot be smarter but you can bet your ass you can learn from them. If both groups work TOGETHER you can overcome your differences and not ruin this hobby for alot of people. RESPECT the choices each other makes, what's good for one maynot be good for another. No-Codes respect the Coders for what they have accomplished and endured and for pioneering alot of what we now have, Coders respect the No-Codes for what they CAN bring to our hobby, for what they will be the pioneers of, they are your future. I know I probably pissed alot of people off by typing this but what the heck someone had to say it :)

kh6hz@anomaly.ideamation.com.NO-SPAM (Michael P. Deignan)
shared these priceless pearls of wisdom:

->In article <6birak$7fq@jupiter.planet.net>,
-> Bill Sohl <billsohl@planet.net> wrote:
->
->>So where's the comparison. To get a hunting license or a fireamrs
->>permit of any kind does NOT require the permittee to exhibit any
->>knowledge of black powder rifles or bows and arrows does it?
->
->Err, in Rhode Island, if you want to hunt using a bow, you have to
->take a bow-hunter's safety class

And in California there are bow-hunt seasons that are different from rifle hunt seasons...so let's take the analogy one step further.

To hunt deer, I've got to have a deer stamp on my hunting license. To transmit morse code I should be required to have a code endorsement on my ham ticket. But if all I want is jackrabbits, why ram the deer stamp down my throat? If I don't want privileges inside the code-only subband, why cram morse code down my throat? It makes not a whit of sense.

And just for technical accuracy, it isn't CW. CW (or more accurately, A0), except for brief tests, is prohibited on the air. I'm sure you meant A1.

I've said it before and I'll say it again -- if you want to make morse code one of the ways to get "points" in an exam, I have not a bit of a problem with that, so long as you can pass the exam without having to choose that particular skill area.

Me? My preference is to split the exam into two parts -- theory and practical. Pass the "written" and then demonstrate the ability to solder, to read the color code, to figure out which side of the wall socket is "hot", make a 2-meter ground plane out of a coffee can and coat hanger -- hell, figure out where the on-off knob on your own transceiver is, for corn sake. I've worked with some Extras I wouldn't trust to change the batteries in a flashlight and some Techs that do moonbounce for the fun of it.

Am I a fuddy? I dunno. My first transmitter was an 807 driven by a 6SL7 but even in those days I couldn't see the wisdom in the morse code requirement. It just makes absolutely no sense -- and if you see it as a rite of passage, you are every bit as guilty of hazing as any fraternity pledge master has ever been.

NoSpam asks:
>>
>Is your beacon limited by law to something like 10 watts?
>
>
Actually, the power limit on automatic beacons is 100 watts. On 10 Meters, they must operate between 28.2 and 28.3 MHz.

Most beacons run at low power for two reasons. It is easier to maintain a continuous duty cycle at low power, and it provides a more realistic indication of band conditions. If you can hear a low power beacon, you can be sure the band is open to that general area--even if you run a modest station.

Since there is not a two-way exchange of information about signal strength (as there is in a regular QSO), beacon operators enjoy hearing from users. Drop them a note by mail or e-mail and let them know they are being heard!

And I said if you want to make Amateur radio die, just make the technical qualifications so high that only engineers can get in. Frankly, I enjoy having folks like Carl Rochelle of CNN, or recording artist Ron Milsap in the hobby. Ditto for all the young folks who have recently joined us. The system, as it is now, is working fine. The entire population of the United States has access to the Amateur bands. Your proposals would change that. Sorry OM. I can't embrace with your ideas.

Actually, it's *my* final word.

Trolls, flamers, and troublemakers thrive on attention, and we give it to them. They love stirring up controversy, and must always, ALWAYS, get the last word in on something. That rarely ever happens, and so they go on insulting and flaming. Look at how many posts they make each day. This should give you an idea of how much time they spend at their keyboards. Their lives are so empty that they can't resist creating havoc.

The fact is that they're frauds. I seriously doubt that they'd do the things here that they do in real life. If they were this abrasive in reality, they'd constantly be nursing black eyes and missing teeth. They are fakes that have to hide behind a pseudonym. The anonymity is extremely important to them. It gives them bravado. If it were stripped from them, they would be vulnerable and have to seek shelter elsewhere, either by another AOL screen name or another "throw-away" internet account.

What they're doing goes beyond any code/no-code debate, or any other debate for that matter. They want to fight, but they don't want to suffer the scars and other consequences that come from being involved in a fight. So they put on the armour that will protect them...anonymity.

This is not to say that all persons who use an anonymous screen name are this way. I've seen pseudonyms on other newsgroups in which participants engage in friendly conversation without the flames. But there's always those few who have to see what kind of reaction they'll get, and still others, such as the ones here in r.r.a.m. that go beyond that...all in the name of free speech. What they don't realize is that their actions make a mockery of the freedom that so many gave their lives to protect.

It think Oscar Wilde said it best: "It's amazing what a man will say when he's wearing a mask."

Randy Aooney mode on...

Did you ever wonder why Len Anderson constantly refers to his military past?? Isn't odd that he continually brow beats us with his historic exploits in the Army and his amazing feets of HF prowess at taxpayers expense, yet whenever someone else cites the same, he's the first to declare it irrelevant and not germane to the topic at hand. Why is that? Let's take a look at some of his accomplishments that I have assembled on my desk. HMMmmmm doesn't seem to be much of anything. Why is that?? Maybe he's irrelevant and not germane to the discussion at hand.

Did you notice that whenever a nocoder screws up, nothing is said by his cohorts?? Witness the witless Code Sucker/Code Boy/ M@S@ fiasco. Why is it Carl and Len and Drew aka CB Dimbulb haven't stomped him into the dirt?? Could it be the NoCode Double Standard really exists?? HMMmmmm

Why is OK for a NoCoder to forgo stating his real name or callsign yet when a procoder does the same he's accused of many things?? HMMMMMmm

Why won't Drew admit he's CB Rambo?? Is he afraid that he might receive the dreaded gun pointing at him JPG?? Hmmmmm

This has been Randy Aooney, good day

REPLY...

Sadly, contrary to the opinions of others in this thread, it is darn easy for an unmodified, stock, CB radio to cause interference with the neighbor's telephone and television.

If you complain to the FCC, they will send you a simple guidebook explaining how to solve common interference problems. They will not get involved beyond that unless it can be demonstrated that illegal radio equipment is being used by the offending party.

To save you the effort of sending for the book, it simply says to fix the problem yourself by installing filters on your television and telephone (Radio Shack). It recommends that the CBer also install filters on their radio, but does not require this.

It also talks about insuring that your television cable, and telephone lines, are properly grounded. It also recommends that the CBer's radio gear be grounded (again, it does not require this).

The FCC's position is that many interference problems are caused by poorly designed telephones and televisions. Therefore , any radio will potentially cause problems. They have demonstrated that a well-designed, stock, CB can cause problems with poorly designed consumer electronics (which they feel means most of the stuff on the market today).

So, in the end, their basic position is, work with the CBer to solve the problem. If you would like a free copy of the guidebook, contact the FCC at one of the numbers already listed in this thread.

1044. This NG doesn't represent all of Ham Radio

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-09 00:00:00 UTC
From: Lee <rfi@vol.com>
Message-ID: <01bd35ab$6a59ed40$916a1b26@default>
Source record: 178813

I'm glad to see some more folks that are tired of the code vs. no-code bickering and I agree with
Chip's post that the place for that is in rec.radio.amateur.policy. Those of you who have been
exposed for the first time to ham radio and ham radio operators via this newsgroup are surely
getting a biased picture of what goes on in ham radio in general. The hams in my area get
along much better than the folks in this NG because we deal with each other face-to-face,
not anonymously. The general interest ham club I belong to has a broad cross section of
interests and license classes and our officers consist of one Extra class, one General and
two Technicians. So, if you wan't to see what ham radio is really about, listen to the bands
and visit the local clubs. Yes, have our groups of lids who congregate here and there and
some bickering does take place, but it is NOTHING like in this NG.

Thanks to those who have stayed on-topic and brought some useful content to the group.
I don't usually list my portfolio in my signature but just in case you think I have no justification
to speak on this matter, this time I will.

REPLY...

At your limited rate of 20 wpm versus my 20 per 5 seconds with voice,
I would take that challenge (even using phonetics).

Of course, for traffic as you describe, I would probably use neither.
A faster mode, such as packet, might be more useful. If I had to use CW
(because of limits of capabilities at the other end), I'd let my
computer send/receive it.

IIRC that was so, but I don't think it is in effect anymore.
I believe it was used mostly by residents in the far North.
I haven't seen any mention of it in the regulations for 20 years or more, but
I wouldn't expect Massa to know about that - he doesn't seem to even know
what's in todays regulations.

I've got a better idea--why don't *you* disappear - soon and permanently - from usenet.You are already missing from ham radio and here you're little more that a mosquito in a hurricane. Ham radio and usenet will both live long and well in spite of you and without your inane stupidity. Instead of just visiting your dorm neighbors, just move in with them and take on their "hobbies" fulltime instead of dabbling.. You won't be missed here. You clearly have never been on ham radio so can't see how you'd be missed there either. Bye.

1055. Help with mobile noise reduction

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-09 00:00:00 UTC
From: zygo@azstarnet.com
Message-ID: <zygo-0902981843470001@dialup05ip14.tus.azstarnet.com>
Source record: 178824

Anybody out there with experience in reducing HF mobile noise in a Toyota Tacoma V6 pickup (or comparable vehicle)? I'm getting S-7 to S-8 noise on both of my rigs (Ten-Tec Scout and ICOM 706-II. The noise blankers take out the ignition impulses quite nicely but I still have a slightly ragged "white noise" background that shows no change with engine speed. I'm assuming it's from the car's computer. It's all to the antenna. No noise with ant disconnected. Antenna now is a mag-mounted Hamstick giving good results. But sure would like to be able to copy weaker sigs .....

From: "James F. Chumbley" <chumbley@sj.bigger.net>
Message-ID: <6bogms$kqu@masters0.InterNex.Net>
Source record: 178827

Have any of you guys been annoyed by what I hope is a beacon transmitting in CW on 7.039.2 MHz? RST about 599+40 dB. It sends "f f f" interminably! "di-di-dah-dit di-di-dah-dit di-di-dah-dit" over and over and over and over. And over. Sends it at about 10 wpm.

Anybody know where the signal comes from? Is it a licensed beacon? Did some ham die about a month ago with his left index finger pressed down on the "f" key of his CW-sending keyboard? Should we send the medics? Or the coroner? Is there a new contest for sending the most annoying transmission imaginable for the longest possible period of time?

Thanks for listening to me vent. I feel much better now, thanks.

Just an FYI...
Many CB'ers forget that these rules are still in the books..

_____
Title 47 - Telecommunication
Chapter I - Federal Communications Commission
Part 95 - Personal Radio Services
Subpart D - Rules for CB Service
Revised as of October 1, 1996

Citizens Band (CB) Radio Service

<RULE 1> Description
<RULE 2> Usage of Rules
<RULE 3> Who is Eligible
<RULE 4> Licenses
<RULE 5>Areas Of Legal Operation
<RULE 6>Special Restrictions
<RULE 7>Operating Channels/Frequencies
<RULE 8>Antenna Height
<RULE 9>Equipment
<RULE 10> Power Output
<RULE 11> Linear Amplifiers
<RULE 12> Permitted Communication
<RULE 13> Illegal Communication
<RULE 14> Paying for Actual Use
<RULE 15> Who Is Held Accountable
<RULE 16> Time Limit of Transmissions
<RULE 17> Identification Methods
<RULE 18> Emergency Usage and Assisting Travelers
<RULE 19> Remote Control Operations
<RULE 20> Telephone Patches and Telephony with CB
<RULE 21> Penalties
<RULE 22> Correspondence from FCC
<RULE 23> Notice of Interference
<RULE 24> Service to Transmitters and Antennas
<RULE 25> Modifications to Transmitters
<RULE 26> FCC Inspections
<RULE 27> Keeping Station Records
<RULE 28> Contacting the FCC

Rule 1 - Description

Citizen's Band Radio Service (CB) is a private, two-way, short-distance
voice communications service for personal or business

activities. The CB Radio Service may also be used for voicepaging.

Rule 2 - Usage of Rules

You must comply with these rules when you operate a station in the CB Service from:
{1} Within or over the territorial limits of places where radio services are regulated by the FCC.
{2} Aboard any vessel or aircraft registered in the United States or
{3} Aboard any unregistered vessel or aircraft owned or operated by a United States citizen or company.

Your CB must comply with Part 95/Subpart E [Technical Rules].

Where the rules use the word "you", "you" means a person operating a CB station. Where the rules use the word "person" the rules are concerned with an individual, a corporation, a partnership, an association, a joint stock company, a trust, a state, territorial or local government unit, or other legal entity. Where the rules use the term "CB station", that means a radio station transmitting in the CB Radio Service.

Rule 3 - Eligibility To Use CB

You are authorized to operate a CB station unless:
{A} You are a foreign government, a representative of a foreign government, or a federal government agency. or
{B} The FCC has issued a cease and desist order to you, and the order is still in effect.

Rule 4 - Licenses

You do not need an individual license to operate a CB station. You are authorized by this rule to operate your CB station in accordance with the rules stated in this Subpart. <*also read Rule 17>

Rule 5 - Areas of Legal Operation

You are authorized to operate your CB station from:
{A} Within or over any area of the world where radio services are regulated by the FCC.
Those areas are:
[1] The 50 United States
[2] The District Of Columbia
[3] Commonwealth of Puerto Rico
[4] Navassa Island
[5] United States Virgin Islands, it's 50 islets and cays
[6] American Samoa
[7] Baker Island
[8] Commonwealth of Northern Mariana Islands
[9] Guam Island
[10] Howland Island
[11] Jarvis Islad

[12] Johnston Island
[13] Kingman Reef
[14] Midway Islad
[15] Palmyra Island, and it's 50+ islets
[16] Wake Island

{B} Any area of the world, except, within the territorial limits of areas where radio services are regulated by -
[1] An agency of the United States other than the FCC, you are subject to it's rules.
[2] Any foreign government, you are subject to it's rules.

{C} An aircraft or ship, with the permission of the captain, within or over any area of the world where radio services are regulated by the FCC or upon or over international waters. You must operate your CB station according to any applicable treaty to which the United States is a party.

Rule 6 - Special Restrictions

{A} If your CB station is located on premises controlled by the Department of Defense you may be required to comply with additional regulations imposed by the commanding officer of the installation.
{B} If your CB station will be constructed on land of environmental or historical importance (such as a location significant in American history, architecture or culture), you may be required to provide information to comply with Part 1.1305 through 1.1319 of the FCC Rules.

Rule 7 - Operating Channels/Frequencies

Your CB station may transmit only on the following channels/frequencies:

channel frequency(Mhz)
channel frequency(Mhz)
1 26.965
21 27.215
2 26.975
22 27.225
3 26.985
23 27.255
4 27.005
24 27.235
5 27.015
25 27.245
6 27.025
26 27.265
7 27.035
27 27.275
8 27.055
28 27.285

9* 27.065
29 27.295
10 27.075
30 27.305
11 27.085
31 27.315
12 27.105
32 27.325
13 27.115
33 27.335
14 27.125
34 27.345
15 27.135
35 27.355
16 27.155

40 27.405

{B} * Channel 9 may be used ONLY for emergency communications OR for traveler assistance.
{C} You must, at all times and on ALL channels, give priority to emergency communication messages concerning the immediate safety of life or the immediate protection of property.
{D} You may use ANY channel for emergency communications or for traveler assistance.
{E} You must share each channel with other users.
{F} The FCC will not assign any channel for the private or exclusive use of any particular CB station or group of stations.
{G} The FCC will not assign any channel for the private or exclusive use of CB stations transmitting single sideband or AM.

Rule 8 - Antenna Height

{A} "Antenna" means the radiating system (for transmitting, receiving or both) and the structure holding it up (tower, pole or mast). It also means everything else attached to the radiating system and the structure.
{B} If your antenna is mounted on a hand-held portable unit, none of the following limitations apply;
{C} If your antenna is installed at a fixed location (whether receiving, transmitting or both) it must comply with EITHER one of the following:
[1] The highest point must not be more than 20 feet (6.10 meters) higher than the highest point of the building or tree on

which it is mounted; or
[2] The highest point must not be more than 60 feet (18.3 meters) above the ground.
{D} If your CB station is located near an airport, and if your antenna structure is more than 20 feet (6.10 meters) high, you may have to obey additional restrictions. The highest point of your antenna must not exceed 39.37 inches (1 meter) above the airport elevation for every 109.36 yards (100 meters, 1 hectometer) of distance from the nearest point of the nearest airport runway.
Differences in ground elevation between your antenna and the airport runway may complicate this formula. If your CB station is near an airport, you may contact the nearest FCC field office for a worksheet to help you figure the maximum allowable height for your antenna. WARNING: Installation and removal of CB station antennas near powerlines is dangerous. For your safety follow the installation directions included with your antenna.

Rule 9 - Equipment

{A} You must use an FCC type accepted CB transmitter at your CB station. You can identify an FCC type accepted transmitter by the 'type acceptance' label placed on it by the manufacturer. You may examine a list of type-accepted equipment at any FCC Field Office or at FCC Headquarters. Use of a transmitter which is not FCC type-accepted voids your authority to operate the station.
{B} You must not make, or have made, any internal modifications to a type-accepted CB transmitter. <*read Rule 25> Any internal modification to a type-accepted CB transmitter cancels the type-acceptance, and use of such a transmitter voids your authority to operate the station.

Rule 10 - Power Output

{A} Your CB station transmitter power output must not exceed the following values under any conditions: AM [Amplitude Modulation] - 4 watts carrier power [CP] SSB [Single Side-Band] - 12 watts peak envelope power [PEP]
{B} If you need more information about the power rule, see Part 95/Subpart E.
{C} Use of a transmitter which has carrier [CP] or peak envelope power [PEP] in excess of that authorized voids your authority to operate the station.

Rule 11 - Linear Amplifiers

{A} You may not attach the following items (power amplifiers) to your type-accepted CB transmitter in any way:
[1] External radio frequency [RF] power amplifiers, also called linear amplifiers, or linears; or
[2] Any other devices which, when used with a radio transmitter as a signal source, are capable of amplifying the signal.

{B} There are no exceptions to this rule and use of a power amplifier voids your authority to operate the station.
{C} The FCC will presume you have used a linear or other external [RF] power amplifier if-
[1] It is in your possession or on your premises; and
[2] There is OTHER EVIDENCE that you have operated your CB station with more power than allowed by CB Rule 10.
{D} Paragraph C above in this section does not apply if you hold a license in another radio service (HAM, etc.) which allows you to operate an external RF power amplifier.

Rule 12 - Permitted Communications

{A} You may use your CB station to transmit two-way plain language communications. Two-way plain language communications are communications without codes or coded messages. Operating signals such as "ten codes" (10-4, etc.) are not considered codes or coded messages. You may transmit two-way plain language communications only to other CB stations, to units of your own CB station, or to authorized government stations on CB frequencies about-
[1] Your personal or business activities, or those of members of your immediate family living in your household;
[2] Emergencies;
[3] Traveler assistance;
[4] Civil Defense activities in connection with official tests or drills conducted by, or actual emergencies announced by, the Civil Defense Agency with authority over the area in which your station is located.
{B} You may use your CB station to transmit a TONE SIGNAL only when the signal is used to make contact, or to continue communications (Examples: tone operated squelch, selective calling circuits). If the signal is an audible tone, it must last no longer than 15 seconds at one time. If the signal is a subaudible tone, it may be transmitted continuously only as long as you are talking.
{C} You may use your CB station to transmit one-way communications (messages not intended for two or more CB stations) only for emergency communications, traveler assistance, brief tests (radio checks) or voice paging.

Rule 13 - Illegal Communications

{A} You must NOT use a CB station-
[1] in connection with activity which is against federal, state or local law;
[2] to transmit obscene, indecent or profane words, language or meaning;
[3] to interfere intentionally with the communications of another CB station;
[4] to transmit one-way communications, EXCEPT for emergency

communications, traveler assistance, brief tests (radio
checks) or voice paging;
[5] to advertise or solicit the sale of any goods or services;
[6] to transmit music, whistling, sound effects or any material to
amuse or entertain;
[7] to transmit any sound effect solely to attract attention;
[8] to transmit the word "MAYDAY" or use any other international
distress signal, EXCEPT when your station is located in
a ship, aircraft or other vehicle which is threatened with GRAVE AND
IMMINENT danger and you are requesting
IMMEDIATE assistance.
[9] to communicate with, or ATTEMPT to communicate with, any CB
station more than 155.3 miles (250 kilometers)
away
[10] to advertise a political candidate or political campaign (You may
use your CB radio for the business or organizational
aspects of a campaign, if you follow all other applicable rules);
[11] to communicate with stations in other countries, except stations
in Canada (on General Radio Service).
[12] to transmit a false or deceptive communication.
{B} You must not use a CB station to transmit communications intended for
live or delayed rebroadcast on radio or television.
You may use your CB station to gather news items or to prepare programs.

Rule 14 - Paying for Actual Use

{A} You may not accept direct or indirect payment for transmitting with a CB
station.
{B} You may use a CB station to help you provide a service, and be paid for
that service, as long as you are paid only for the
service and not for the actual use of the CB station.

Rule 15 - Who Is Held Accountable

You are responsible for all communications which are made BY YOU from a CB
station.

Rule 16 - Time Limit of Transmissions

{A} You must limit your CB communications to the minimum practical time.
{B} If you are communicating with another CB station or stations, you, and
the stations communicating with you, must limit each
of your conversations to no more than five (5) continuous minutes.
{C} At the end of your conversation, you, and the stations communicating
with you, must not transmit again for at least one
minute.

Rule 17 - Identification Methods

{A} You need NOT identify your CB communications...
{B} You are ENCOURAGED to identify your CB communications by any of the
following means:
[1] Previously assigned FCC CB call sign

[2] K prefix followed by operators initials and residence zip code
[3] Your name; or
[4] Description of your organization including name and any applicable operator unit number
{C} You are encouraged to use a "handle" (nickname) ONLY IN CONJUNCTION WITH the methods of identification listed above in paragraph B of this section.

Rule 18 - Emergency Usage and Assisting Travelers

{A} You must at all times and on all channels, give priority to emergency communications.
{B} When you are directly participating in emergency communications, you do not have to comply with Rule 16 about length of transmissions. You must obey all other rules.
{C} You may use your CB station for communications necessary to assist a traveler to REACH A DESTINATION or to RECEIVE NECESSARY SERVICES. When you are using your CB station to assist a traveler, you do not have to obey Rule 16 about the length of transmissions. You must obey all other rules.

Rule 19 - Remote Control Operations

{A} You MAY NOT operate a CB station transmitter by RADIO remote control.
{B} You MAY operate a CB transmitter by WIRELINE remote control IF you obtain specific approval in writing from the FCC. To obtain FCC approval you must show why you need to operate your station by wireline remote control. Send your request and justification to: FCC, Gettysburg, PA 17325. If you receive FCC approval, you must keep the approval as part of your station records (read Rule 27 on station records).

Rule 20 - Telephone Patches and Telephony with CB

{A} You MAY connect your CB station transmitter to a telephone if you comply with ALL of the following:
[1] You or someone else must be present at your CB station and MUST-
(i) manually make the connection (the connection cannot be made by remote control);
(ii) supervise the operation of the transmitter during the connection;
(iii) listen to each communication during the connection; and
(iv) stop all communications if there are operations in violation of these rules.
[2] Each communication during the telephone connection must comply with all of these rules.
[3] You must obey any restriction that the telephone company places on the connection of a CB transmitter to a telephone.
{B} The CB transmitter you connect to a telephone must not be shared with any other CB station.
{C} If you connect your CB transmitter to a telephone, you must use a phone patch device which has been registered with the

FCC.

Rule 21 - Penalties ++may not be current penalty information.

{A} If the FCC finds that you have WILLFULLY or REPEATEDLY violated the Communications Act or FCC Rules, you
may have to pay as much as $2,000++ for each violation, up to a total of $5,000++.
{B} If the FCC finds that you have violated any section of the Communications Act or FCC Rules, you may be ordered to stop
whatever action caused the violation.
{C} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any FCC Rule, you may be fined up to
$500++ for each day you committed the violation.
{D} If a federal court finds that you have WILLFULLY and KNOWINGLY violated any provision of the Communications
Act, you may be fined up to $10,000++ or may be imprisoned for one year++, or both++.

Rule 22 - Correspondence from FCC

{A} If it appears to the FCC that you have violated the Communications Act or these rules, the FCC may send you a
discrepancy notice.
{B} Within the time period stated in the notice, you must answer with:
[1] A complete written statement about the apparent discrepancy;
[2] A complete written statement about any action you have taken to correct the apparent violation and to prevent it from
happening again; and
[3] The name of the person operating at the time of the apparent violation.
{C} If the FCC sends you a letter asking you questions about your CB radio station or its operation, you must answer each of
the questions with a complete written statement within the time period stated in the letter.
{D} You must not shorten your answer by references to other communications or notices.
{E} You must send your answer to the FCC office which sent you the notice.
{F} You must keep a copy of your answer in your station records.

Rule 23 - Notice of Interference

{A} If the FCC tells you that your CB station is causing interference due to technical reasons, you must follow all instructions in
the official FCC notice (This notice may require you to have technical adjustments made to your equipment).
{B} You must comply with any restricted hours of CB station operation which may be included in the official notice.

Rule 24 - Service to Transmitters and Antennas

{A} You may adjust an antenna to your CB transmitter and you may make radio checks (One-way transmissions for a short

time in order to test the transmitter).
{B} Each internal repair and each internal adjustment to your FCC type-accepted CB transmitter must be made BY or under the DIRECT SUPERVISION of a person licensed by the FCC as a GENERAL RADIOTELEPHONE OPERATOR.
{C} Except as provided in paragraph D below in this section, each internal repair and each internal adjustment of a CB transmitter in which signals are transmitted must be made using a NONRADIATING antenna (Dummy Load).
{D} Brief test signals (signals not longer than one minute during any five minute period) using a radiating antenna may be transmitted in order to:
[1] adjust an antenna to a transmitter;
[2] detect or measure radiation of energy other than the intended signal; or
[3] tune a receiver to your CB transmitter.

Rule 25 - Modifications to Transmitters

{A} You must not make or have any one else make any internal modification to your CB transmitter.
{B} Internal modification does NOT include:
[1] Repair, or servicing of a CB station transmitter; or
[2] Changing plug-in modules which were type-accepted as part of your CB transmitter
{C} You must not operate a CB transmitter which has been modified by anyone in any way, including modification to operate on unauthorized frequencies or with illegal power.

Rule 26 - FCC Inspections

{A} If an authorized FCC representative requests to inspect your CB station, you must make your CB station and records available for inspection.
{B} A CB station includes all of the radio equipment you use.

Rule 27 - Keeping Station Records

Your station records include the following documents, as applicable:
[1] A copy of each response to an FCC violation notice or an FCC letter.
[2] Each written permission received from the FCC.

Rule 28 - Contacting the FCC

{A} Write to your nearest FCC Field Office to:
[1] Report an interference complaint; or
[2] want to know if the FCC has type-accepted a particular transmitter for CB service.
{B} Write to the FCC if you have questions about the CB Rules: FCC Private Radio Bureau Personal Radio Branch
Washington, DC 20554

I can see it now.... Fcc bans use of the very obsolete, obnoxious Morse code. Procoders, fighting back, drop callsigns and assume "handles" ala the 27 mHz bunch, and go on a QRM rampage, turning up the wick full QRO and trashing every digital and voice QSO on the map, and avoiding all attempts to identify or otherwise corral them....No one can determine what they are saying as they are the only ones who can copy Morse code........They use "bugs" to defeat all attempts to copy by computer program......Ain't ham radio fun?

>actively DISCOURAGE new members from joining.

You've got to be KIDDING! You, Rambo, are the one passing out all the discouragement. You're the one who bad-mouths Amateur radio all over rec.radio.cb at every opportunity--even when it means jumping on some fellow CBers innocent remark. That's what the poster was referring to. You apparently have a short attention span......

Carl Stevenson also said:

>There is no "lofty ideals BS" as you put it ... it the "ideals" look
>"lofty" to you, maybe you're starting to see some hint of reality instead
>of your jealous hatred of anyone who suggests that licensing requirements
>need to be changed from what *you* had to go through ...

Yrac says, assuringly,

There is no hatred on my part, Carl. Just impatience with all your mud slinging. Folks were being nice to you and giving ear to your ideas until you got so militant about the issue.

May I point out that the licensing requirements have changed considerably since I took my tests. For my General test, I had to get up at 4AM to catch a ride to the testing center in Wilmington, NC. My ride was with some telephone company employees who were going after their 1st Class 'phone tickets. I took an exam vastly different from the style offered today, and my code copy had to be PERFECT for at lease one minute out of five. (Did I mention I walked to school 3 miles uphill, each way?)

I would not ask us to go back to those days. Just getting to the testing center was an obstacle for many folks. Amateur radio is much more accessible today. That's why we jump your case. We've relaxed the requirements greatly, but you always want JUST A LITTLE MORE.

We don't hate you, Carl. I don't even dislike you. In fact, a lot of your earlier ideas had merit. Stop pushing so hard and enjoy life. Either get the higher speed code mastered, wait for the government to relax the requirements further, or get a waiver.

Yrac

Never said anything about Pro-CWers being more mature...did I??
Paranoid... think all the Pro-Cwers are against you?
>
>
>> Why not act like the
>>mature person you really are.
>
>because Pro-CWers act stupidity.
Thanks...but didn't write the original part of this thread. That
"The Fact" posting came from a no-coder.
>
>
>> I could care less if you're for or
>>against code.
>
>
>> I like code...you obviously don't.
>
>ok. so ??
Just an observation...CS, you sure have a chip on your shoulder
against CW operators...did one give you a wedgie when you were a
kid?? :) (levity, CS, not an insult...)
>
>> It's your right.
>
>yeah ?? why no coders can't use HF ?? please wake up
The statement "It's your right " refers to your right to not like
code. Wake up, yourself.

As for your response...learn the code, CS, it really isn't that hard.
Then you can use all the HF freqs that your licence allows.
>
>>Please, just don't try to shove statements (like the ones below) down
>>my throat as "The Fact". Thanks for listening, CS.
CS, loose that chip on your shoulder and you might find that more
people will listen and respond to your posts with respect, instead of
thinking what a jerk you are.
Responding with respect to you, CS.

Think again. the Pro Code group is pretty laid back. It's you who is so uptight that you spend untold hours at the keyboard, keeping this useless thread alive.
>
>Well their first argument is that there is a hidden agenda, instead of
>promoting growth of the hobby.

Nobody has yet to answer the question, even though it's been asked several times. Is it boxers or briefs? (Opps, wrong news conference). We looked up Carl and Bill in the data base. What's you license status, OM?
>
>The next line of the fuddy-duddy code of rules and regulations is to
>call you lazy, a whiner, childish, or somehow "defective".

Well, son, I hate to be the one to tell you this, but that's how it comes across in your writing. If I'm reading it wrong, I truly apologize. Reread your recent posts with an open mind, or ask a trusted friend to review them. See what you get from them.

> They want
>to make you feel bad about yourself; they want to make you feel guilty
>for attacking their sacred cow.

The Sacred Cow is always subject to review. So is the written exam. Don't feel guilty about raising the issue. But when it comes to building someone's self-esteem, consider toning down your remarks a bit, especially calling folks a "liar" just for expressing an opinion which differs from yours.

> They try and convince you your views
>are in the minority or weird.

Frankly, yours ARE in the minority in this NG, if you consider the number of different folks who jump on every posting you do.There also is a lot of e-mail being exchanged relative to your comments. The general feeling is that the no-code movement is small, but loud.

You objected to this remark, which you pulled out of context:
>
>>Gosh! I hope as you move into the hobby some day, you take some time to
>learn
>>about its past. Your ham experience will be much richer if you do.
>
Originally, this was a response to your question about why the Amateur radio

service was created--specifically, you asked if it was to give us something to do with our hands--obviously a reference to your earlier "twiching" remarks. Hopefully, you will avail yourself of some information about the history of the ARS and its proud tradition of serving the public. True, we get a lot of personal satisfaction out of radio communication, and we have a great deal of fun. But, if you look back at the reason the ARS was created, you will find some more serious motivation on the part of the US Government. This knowledge, I repeat, will make your ham experience much richer.

>
>How about walking down the streets of Newington naked at high noon,
>eating a broiled chicken? I expect many of you will refute this, on
>the basis of arranging transportation to Newington.
>
>

Actually, I LIKE this suggestion. The original proposal about standing in front of the radio club in your underwear, reciting the Amateur Code from memory, was too tame. Far be it from me to "dumb down" Amateur radio! With your permission, I will include this in some upcoming correspondence.

>
>When other means of defense are non-existent, we get a little
>compliment, and a "go-away now":
>
Well, son, the compliment was sincere. Sorry you did not accept it as such. As for telling you to "go away now", that's not quite accurate. The actual statement was, "Take it to .policy where you will find plenty of folks who will chat with you on the subject of Code Examinations." This was not a pat on the head and a dismissal. The suggestion about moving the discussion originated with another party, last week. Several Amateurs in the NG have seconded the motion, and I concur.

73,
Yrac

I'm very pleased to find such raving lunacy in the
statements above. It serves as an indication that
some procode test folks have lost all faith in finding
any compelling reason to retain CW testing and now
deem it necessary to create hysteria by falsely
claiming we are out to end code use.

It isn't the case at all and MD knows that. You can
take the propoganda line all you want but we will refute
it every time as it is a bogus statement.

>think I'd be stupid
enough to use my real name when omitting a callsign?

Funny... I use my real name, callsign, etc, and if anybody can't figure out how to do a search to find my address, fone number, etc and wants the info, I guess I would probbly give it to him.

I don't get harrassing mail, derogatory QSL cards, anything like that, even though I don't keep my opinions to myself. I think my views have just a bit more credibility since I do not remain anonymous, Drew, Rigley, or whatever you want to call yourself. Ditto with most of the other people who post to the rec.radio newsgroups.

Want people to respect your opinion? then don't hide while you try to make your point.

Look me up, "Rigley". come on over for a cold one, and we'll discuss stuff, talk radio, whatever, and I promise not to slip a "derogatory QSL" in your pocket when you get ready to leave. I'm actually not such a bad guy, and I bet you aren't either, face to face. Anonymity brings out the worst in people, I think.

"I wanna hear him TALK TOUGH!!"

Huh? I don't discourage new hams. In fact, I am slowly directing the focus of my website toward new and wannabe hams. I was encouraged to become a ham, and that wasn't so long ago, either. I haven't seen or heard of ANY hams discouraging new hams. I don't hear it on the air (I admit I don't listen to fone, though) nor see it in the ng. Most of us are willing to stop bickering long enough to help a newbie, and explain that our fussing and fretting over the most controversial issue of late, code/no-code, is not required reading for participation in amateur radio as a whole.

Most of us don't hesitate to explain what we can about FM, HTs, repeaters, SSB, etc if the question comes up, even those of us who actually prefer using CW or other digital modes on HF. Every time a newbie comes up on the ng with "how do I learn the code?", though, guys like you, the Code Sucker, et al, instead of helping, tell them not to waste their time.

On second thought, you could be right... maybe there ARE some hams discouraging newbies.

1091. Rain Dial-up for 2/6-12/1998

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-09 00:00:00 UTC
From: arnoldr@ollie.ralabs.com
Message-ID: <34de3323.501776778@news.axess.net>
Source record: 178863

This is posted at the request of Hap KC9RP. Hap currently does not
have newsgroup access. Please direct your messages to Hap at
hholly@ollie.ralabs.com.

The RAIN Dialup for the week of February 6-12, 1998 includes:

"The Seemy Side of Contesting"

CQ Worldwide contest committee chairman, Robert Cox/K3EST,
addresses the issues surrounding the bending and breaking of contest
rules in this excerpt from his 1997 Dayton Hamvention talk; (9
minutes, 2 seconds).

"Ham Radio and Career Choices"

This is an excerpt from a 1997 Dayton talk by young Hiawatha,
Kansas resident Kathy Gilliland/KB0FDU; (3 minutes, 3 seconds).

The RAIN Dialup is heard in Toronto, Oh, 7:30 PM Sundays as part
of This Week in Amateur Radio, tape delayed on 2 meters simplex via
KB8SFC, who can be heard in Steuvenville, OH.; Weirton, WVA; and
Paris, PA. on 146.58 MHz.

The RAIN Dialup updates Fridays at area code 847-827-RAIN,
and on the worldwide web at RRSTA.COM/RAIN. A 28.8 KBS or faster modem
is required for our Real Audio 3.0 streamming audio there. Be advised
that Real Audio freeware will not permit downloading of RAIN audio.
The Real Audio Player Plus will allow the user to open a file on the
hard drive.
The software will cause the drive to stop and start during times
of network congestion, resulting in a seamless audio program ready for
transmission over Amateur Radio repeaters.

The RAIN Dialup is copyrighted 1998, all rights reserved.
Unrestricted local VHF/UHF over the air dissemination of the RAIN
Dialup is exempt from copyright licensing. Audio distribution of this
service is licensed only to the following outlets:
Internet: Bohnhoff Mediacasting (rrsta.com);
H.F.: Vern Jackson/WA0RCR's 160-Meter Gateway Radio Newsletter

(Saturdays, 8 PM central on 1860 Khz AM from Wentzville, Mo);
Satelite: This Week in Amateur Radio (9 PM Eastern Saturdays
on SBS 6, 13B Horizontal, 5.8 Mhz audio).

If you run both RAIN and either Newsline or the ARRL audio news service on your net, we suggest you run RAIN at the end after all traffic and check-ins have been handled. Those stations needing to leave can without fear of missing the formal part of the net. You'll be surprised, however, just how many will check in and stick around to hear a RAIN program that probably no one else in the area is carrying. And remember, a regular check-in is a prime candidate for becoming a member.

Are you tired of paying long distance phone charges, enduring 160-meter static crashes or Internet congestion to listen to RAIN Programming? A one-year subscription to all RAIN programming is available on audiocassette for $30.00 a year; $10.00 more to keep all 12 tapes.
Make checks and non tax deductable donations payable to RAIN, and send to Po box 2565, Des Plaines, IL 60017-2565.

HELLOOOOOOOOOO ?? You don't know anything about it, do you ??
Then SHUT YOUR **** MOUTH UP.
I am using wire antenna for 80m and works ok. Occasionally, I pick
up liberty net.

>> Pro-CWers, wake up. Ham radio will disappear very soon.

>We know Masa, but were too busy building gear, running contests, rag chewing,
>DXing and having fun on HF to notice.

yeah you are busy with being lonely on your shack and doing these
while 99.999% of others don't show any interests to you.

Look around.

If we don't have enough amateurs to support the hobby, the amateur
will die. Think. How many % of amateurs are aged 50 and above ?
Think of 10 year period. How many % of amateurs are going to die ?

go tweet, tweet, tweet

> Even now the
> figures are inflated with 10 year licenses. A lot of those OM's are dead but
> still on the roles.

Would these be acting roles?? According the anal retentive CB Spewbo,
the correct spelling should be "rolls", as in buttered, as in cinnamon.

> When is the last time you QSOed a teenager.

In fact more than a dozen this past weekend, on a number of different
bands and different modes.

> Maybe one or
> two at most.

Ah yes, the Roger Buffington theory that only the old use amateur radio.

> When I got my ticket in 57 teenagers were a large part of the
> population. But at that time you could build your own or get cheap surplus
> gear. Also it was the only way to talk to the world and meet others with the
> same technical interests.

The same was said after WWI (The ol geezerson's time frame) when many
young men bought war surplus aeroplanes and took to the air. Some
predicted that the car would disappear as everyone would fly.

> If the Internet existed then I doubt that I would
> have taken the trouble to learn the code when for $20 a month I could do all
> above and more. Prediction: If ham numbers do increase then it will be more

Bettr not have Carl see this, he'll have a coronary, but then again,
looking at your point of view, I will guess the good ol NCDS will kick in
and he won't comment for fear of offending a fellow thinker.

> But I predict the numbers will continue to decrease and the hobby will
> die slowly. The manufacturers will pull out as sales decrease.

Please, as requested before many times, what are the basis for these
Chicken Little remarks.

> Another reason many hams are leaving is the present level of garbage that
> is on the bands that mirrors these ham newsgroup pages and makes people like
> me licensed 40 years now afraid to post my call because of the threats ect.

OHHH PLease.. Calling all Carls's, calling all Carl's, you conspiracy
theory is spreading. Be on the lookout for black helicopters circling
overhead!!! HA HA HA HA good one......As if HA HA HA HA

Amazing with all those Mega Hertz of bandwidth, you people spend the most
time listening to the handful of frequencies that the garbage is drawn
to. In fact, a prime example was the anal retentive Drew Durigan who
actually records these frequencies. HA HA HA I wonder?? Do you sit in
front of the TV, cable box at the ready, with 60 ++ channels and leave it
only on the smutty channels, then complain the TV is going to hell in a
hand basket cause there's only filth on the air?? Probably so.
Amamzing, all you "people" have defective equipment..no on/off switch, no
VFO controls... tsk tsk tsk Must be so boring to be limited to only
one frequency like that. tsk tsk tsk

> I now work all CW which is still clean and friendly but most all the guys
> there are in their 60's and up so that is thinning out also as they become
> SK's.

Guess you never hang out in the novice bands do you. Plenty of young
people there.

> I'm just glad that I was able to enjoy the years I've had.

Don't worry so much. According to the likes of Roger and Drew, you'll be
joining your friends soon enough. Too bad you never had a chance to
share your experiences with younger people. I say that because if you
had, you'd have mentioned it somewhere during your tale of woe.

WIA (NSW) NEWS (08/02/98)

SILENT KEY

It is with great regret that we announce the passing of Hans Fritz Ruckert, VK2AOU, who died suddenly on the 6th of January 1998. He was 83 years old.

Hans, well known to many Australian amateurs, arrived in Australia in 1951 and, due to his electronic qualifications, started work for Ducon Condenser, later Plessey Ducon, where he developed the production of ceramic capacitors. He obtained a patent for his system of piezoelectric ceramics manufactured by Plessey.

He developed the VK2AOU tri-band amateur aerial -- the forerunner of some German and Japanese amateur antennas.

Hans published over 200 articles in local and overseas electronic magazines and, for many years, he was a regular contributor of "Amateur Radio" , the W.I.A. magazine.

He was involved with amateur radio both in Germany and Australia for close on 67 years.

Our deepest sympathy is extended to his surviving children, Sigrid and Hardy and their families.

Vale, Hans Fritz Ruckert, VK2AOU

DIVISIONAL NEWS

COUNCIL MEETING TO BE HELD IN CAMERA

Due to unforeseen circumstances, contrary to what you may have read in this month's AR, the council meeting on Friday 13th February is to be held in camera.

EXAMINATIONS

The next examinations will be held on Sunday 15 February 1998 at Amateur Radio House, Parramatta. The examinations will start at 12 noon, or shortly thereafter.

NOMINATION FORMS FOR COUNCIL AGM

Members are reminded that nomination forms are now available at the Office for any member of the VK2 Division who wishes to stand for Council. Closing date for nominations, and also for notices of

motions for the AGM is Saturday 7th March.

STRATEGY AND PLANNING INPUT WANTED

The Strategy and Planning Officer invites submissions from members for from members for suggestions to correct any defects in the Articles of Association of the Division, or for any possible improvements.

Your comments should be forwarded in writing to the Secretary of the NSW Division before February 21, 1998.

(morning only) DURAL COMMITTEE MEETING

A reminder to team members and visitors that the committee meeting will be held this morning -- at VK2WI -- following the callbacks.

FIELD DAY WEEKEND BROADCASTS

Listeners are reminded that the Central Coast Field Day is being held on Sunday, 22nd February. As is the practice on this day, the VK2WI morning broadcast will not be held. Instead, it will be conducted on Saturday evening. The time will be advised in next week's broadcast.

The Sunday evening broadcast on the 22nd will be at the normal time of 7.30 pm.

WICEN News

A new event on the WICEN calendar is the "Minolta Ironman Australian Triathlon", to be held at Forster-Tuncurry on Sunday April 5th. As before, the Event Coordinator is Steve VK2KXQ.

The Central Coast Amateur Radio Club is having its annual Field Day at Wyong Racecourse on 22nd February, and Malcolm VK2YVA is collecting names for the roster; please consider giving up a couple of hours of your time to help out, as we are still a few short.

The mid-year conference of the Volunteer Rescue Association (VRA -- of whom we are a specialist squad), will held in Wollongong over the weekend of 21st-22nd March. As usual, WICEN will be represented, and will even find a way of partaking in the upcoming State Wide Exercise.

WICEN (NSW) will be holding a State Wide Exercise, prior to the commencement of the John Moyle Field Day, on March 21, 1998. Further details will be sent in a mailout to all members, all of whom are encouraged to take part (in order to test your readiness) and to stay on for the Field Day.

A reminder for events later on in the year include the Bushwalkers Rogain, run by Malcolm VK2YVA, on the weekend of 27-28th June at a location to be advised just two weeks previous, and the Hawkesbury

Classic Paddle, on the weekend of 31st October and 1st November.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Northern Rivers each Tuesday at 8pm around 3610 kHz on odd Tuesdays and the Lismore repeater 6800 on even Tuesdays, Hunter each Wednesday at 7.30pm on the Newcastle repeater 6975, and Central Coast each Thursday at 8.30pm on the Wyong repeater 7125. If any region has any news or information they would like published, then please contact the Publicity Officer, Dave VK2KFU. If further information about WICEN (NSW) is required, please contact the acting State Coordinator, Alan VK2YYJ, on the WICEN mobile telephone, 015-097-217.

A mailing list for those interested in WICEN is available; just send the command "subscribe wicen your-email-address" to the address "majordomo@nsw.wicen.org.au", and you will receive further information. WICEN (NSW) also has a Web page, and the Uniform Resource Locator is: "http://www.nsw.wicen.org.au/". These are generously provided by the Macquarie University School of Mathematics Physics Computing and Electronics.

CABLE AND SATELLITE EXHIBITION

The season of trade and information exhibitions has commenced again.

In this coming week - Tuesday 10th until Thursday 12th - the Australian Cable and Satellite Exhibition will be held at Darling Harbour.

ARRL DX Bulletin 005

AZERBAIJAN, 4J. Stations in Azerbaijan may replace their regular prefixes with the prefixes 4KA and 4JA until December 31. To celebrate the country's 80 years of independence, look for the Radio Club Baku to be QRV as 4K80ADR. QSL via operator's instructions.

BARBADOS, 8P, G3RFX will be QRV until February 16 as 8P9FX from Christ Church. He is using CW and SSB on 40 and 20 meters, with some 17 and 15 meter activity as well. QSL to home call.

SPRATLY ISLANDS. Members of the Chiltern DX Club and The UK DX Foundation plan will be QRV as 9M0C from Layang-Layang from February 12 to 24. Operations are expected on 160 to 10 meters, including the possibility of 2 meters. QSL via G3SWH.

NEPAL, 9N. Vladimir, RU6FP, is QRV as 9N1FP for the next 4 months. His activity is permitted on 40 and 20 meters using CW. Check 14002 kHz around 1230z and 7005 kHz between 1200 and 1330z. QSL to home call.

MOZAMBIQUE, C9. Franco, I4LCK, will be QRV beginning February 7 as C91LCK. QSL to home call.

IRAN, EP. Rino, EP3GI, is QRV on 40 and 20 meters using SSB until May. QSL via EA5XV.

GUAM, KH2. Dave, N2NL, is active as N2NL/KH2. For the next few weeks, he will concentrate his operations on 80 and 40 meters. QSL via W2YC.

GREECE, SV. The Radio DX Group of Thrace will operate Special Event Station J47XCF until February 28 during the Xanthi Carnival Festival 1998. Operations are on all bands and modes. QSL via operator's instructions.

WESTERN KIRIBATI, T30. Jack, VK2GJH, will be QRV as T30JH from Tawara until February 24, operating mostly on 6 meters. QSL to home call.

CHAD, TT, Eric, F5JKK, is QRV as TT8JE, and has been active on 40, 20 and 17 meters. He expects to be here until March. QSL via F6FNU. Also, John, TT8JFC, was QRV on 20 meters using RTTY between 2330 and 0030z. QSL via WA4ZJB.

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
(30 January - 05 February)

issued on 06 February 1998

Summary
Date 30 31 01 02 03 04 05
10cm 91 89 91 89 89 89 86
A 12 10 10 2 4 6 (03 expected)
T 61 1 16 54 52 71 54

Solar activity was very low during the period.

Geomagnetic activity observed at Learmonth, WA, was quiet 2nd to 3rd, and 5th February; unsettled on 1st, unsettled to active on 30th January and 4th February; and quiet to active on 31st January.

Ionospheric F2 critical frequencies were near predicted to 1900 UT on 30th, then depressed to 15 per cent, continuing depressed 15 to 30 per cent on 31st and 1st; then quiet for the remainder of the period. Spread F was reported during local night on 31st and 1st.

FORECAST (06 FEBRUARY - 12 FEBRUARY)

Solar: Very low

Geomagnetic: Quiet to unsettled

Frequencies: Near predicted monthly values.

The Australian Amateur Packet Radio Association

Here are the remaining titles for the updated software:-
(6) [Sally 1.07] (Win) 24-11-97 by Ted Harrison G8NPF
(7) [TstHWin 1.01] (WIN95) 29-11-97 by Mario Travaglino IK1GKJ
(8) [FPAC 2.0r] (DOS) 4-8-97 -- updated from 2.0q
(9) [F-PROT 2.28] (DOS) 25-7-97 -- updated from 2.27a
(10) [PGP 5.01 beta 8a] (DOS) 11-10-97 -- updated from 2.6.3

If more information is required, about the software, or about the Australian Amateur Packet Radio Association in general, write to:-

Secretary
Australian Packet Radio Association,
59 Westbrook Avenue,
Wahroonga 2076

or phone:- (02) 9489 4393

AUSTRALIAN AMATEUR TELEVISION CLUB INC.

The next meeting of the A.A.T.C. Inc. will be held on February 8th 1998 , at 1.00 p.m. - the first one for the year - that's today, in 2 hours' time.

Topics for the meeting will include discussion on planning for the Wyong Field Day on 22nd February.

There will be the Dave and Bob show, brought to you from Yellow Card Services, discussing the repeater and the ID on the second channel of the club's 23cm repeater.

For more information about ATV, contact Bob the Publicity Officer on (02) 9587 3491 during normal civilised times -- and ring Bob for the Web site URL.

CASTLE HILL MILITARY RADIO MUSEUM

The Castle Hill Miltary Radio Collection will mount the usual display at the Central Coast Field Day on the 22nd of February.

The sturdy trailer will again be present for any donations of equipment, books or spare parts.

If you are in need of an elusive circuit for a piece of disposals equipment, please give Ian a ring on Sydney (02) 9680 2112 and he will endeavour to have the information at the Field Day for you.

There will be more information next week outlining the contents of the display.

As usual, there will be a few surprises.

CENTRAL COAST

The Central Coast Amateur Radio Club (Inc) has a new home page! It can be found on the following URL:

http://www.ccarc.org.au (you MUST use all lower case)

On the page can be found some general information on the club. Additionally, about half way dowh the page is an anchor (link) to a secondary page with relevant Field Day info! Between NOW and the Field Day it is hoped that MORE info pertaining to it will be added to the page!

Please feel free to re-visit the page at regular intervals as it is proposed that there will be quite substantial additions and improvements! MORE links will be added, additional club info, proposed classes and a whole host of other goodies! ALWAYS RELOAD/REFRESH, JUST IN CASE! It is hoped the overworked and underpaid (or is it vice versa) Webmaster will update it ABOUT every fortnight ... subject to more MATERIAL being provided! Please feel free to leave a message, comments and/or suggestions by clicking on "ccarc" in the box (or table) on the bottom! As an aside, anyone with any tips to add STREAMING AUDIO, could you contact the writer at the addy that follows. Thanks

Ian (Indy) VK2XB
vk2xb@vk2xb.ampr.org OR
rosser@terrigal.net.au

FISHERS GHOST AMATEUR RADIO CLUB

Classes are held in Basic Electronic Theory and Morse Code every Wednesday Evening from 7:00 pm at the Campbelltown High School, Chamberlain St. Campbelltown.

Aklso every third Tuesday of the month from 7:30 pm, at the Campbelltwon High School is the General Meeting night with lectures on popular subjects. Visitors are always welcome.

NOTICE OF AGM

To all Fishers Ghost Amateur Radio Club Members: The 1998 Annual General Meeting of the Fishers Ghost Amateur Radio Club Inc. will be held on the 17th of February 1998, in the Fishers Ghost ARC club rooms, Campbelltown High School, Chamberlain Street Campbelltown. The meeting will start at 7:30 pm sharp.
Proxy votes should have been lodged with the Secretary last Tuesday.

Classes resumed last Wednesday with a good roll up. Les VK2TJ had a list of results from theexams held last December. Congatulations to the following people for passing their exams:
Glen Weston Novice Theory

Tony Horozakis 12wpm Receive
R. Long 12wpm Receive

The club will be starting a 10 metre CW practice net soon, more details when they are finalised.

Once again Fishers Ghost is travelling to Wyong by bus, at the moment there are a few seats left, anyone who would like to join us please ring the Publicity Officer on (02) 4681 9365 (h.)

GLADESVILLE

A reminder to members and visitors that the monthly meeting of the Gladesville Amateur Radio Club Incorporated will be held - tomorrow night - Monday - at Number One, Birdwood Avenue Lane Cove.

The meeting will start at 7.30 pm.

HORNSBY & DISTRICT AMATEUR RADIO CLUB Inc.

Remember, the first informal meeting is this coming Tuesday 10th February 1998, commencing at 8.00 p.m. in the Mount Colah Community Centre, Pierre Close, Mount Colah (near the eastern entrance to the railway station). All are welcome.

If you are interested in becoming an Amateur Radio Operator, remember the Club will again run classes in 1998, starting in mid March, and the club hopes to maintain the success rate of 1997. So enrol now and be there at the start. For more information, phone the Education Officer Tony VK2BTL on 9487 3383.

Join the Club net -- it is held every Monday night at 8.00 p.m. on the Club repeaters VK2RNS and VK2RAT. The respective frequencies are 147.250, with a positive offset; and 444.975, with a negative offset, respectively. All amateur radio operators are welcome to join in. Listeners, tune your receivers to 147.250 or 444.975 Mhz.

For more information regarding the Club, or its activities, write to:-

HADARC, PO Box 326, Hornsby, 2077

or phone John VK2WRT on 9807 2490

ILLAWARRA AMATEUR RADIO SOCIETY

The first meeting for 1998 of the Illawarra Amateur Radio Society will be held on Tuesday evening, February 10th. All members and their guests are invited to attend.

The meeting will commence at 7.30 pm in the meeting room at the S.E.S. building, Montague Street, North Wollongong.

After the meeting, Victor will lay on his kaleidoscope of gastronomic delights.

If members and guests can pull themselves away from the supper tables, a video will be shown.

Don't forget the Wyong bus trip! No deposits - no backside on a seat!!

If you would like more information about this meeting, or you would like to be a member of the club, setting the standards that others follow -- why not phone their office on 02 4267 2296, as the office is open every day from 4.30 pm to 7.30 pm. The postal address of the club is P.O. Box 1838 Wollongong 2500.

This month's raffle prize is valued at around 25 dollars, so bring along your two dollar coin and we will give you three chances to win.

Hoping to see many members and guests at this, the first meeting for 1998, of the Illawarra Amateur Radio Society Inc.

LIVERPOOL & DISTRICT AMATEUR RADIO CLUB

Radio amateurs will be pleased to hear that the Liverpool & District Amateur Radio Club's repeater will again be operational in the near future. The tower has now been erected and fit-out at the repeater site is continuing.

The next meeting of the Liverpool % District Amateur Radio Club will be held next Wednesday 11th February, 1998.

Members are reminded to bring items being donated for sale at the Central Coast Field Day to the meeting.

The club meets at the Scout Camp, Cambridge Avenue, Glenfield. The meeting will start at 8.00 pm (or soon after that time).

Visitors are always welcome to the club's meetings.

SUMMERLAND AMATEUR RADIO CLUB

On Sunday 15th February at 1.00 pm, the Summerland Amateur Radio Club will be conducting its Annual General Meeting . The clubrooms are on Richmond Hill Road, Goonellabah.

The business of the day is to table reports, hold election of officers, a proposal to change the name of the club, and any other business.

All members, associates and any person interested in radio, electronics or computers, are invited to attend. Members are especially asked to participate in deciding the future activities of the club.

Members are reminded that examinations are being held today in the clubrooms, so please steer clear until after 1200 hours (unless involved in the exam).

More information is available from Bert, VK2HIV, on 6624 3239, or Graeme, VK2GJ, on 6685 1336.

Check out our web page:
http://www.nor.com.au/community/sarc/sarc.html

WAVERLEY AMATEUR RADIO SOCIETY

The third Wednesday of every month is our regular meeting evening, so the next will be on February 18th at 7:15 pm for a 7:30 start. The clubhouse is in Vickery Avenue, Rose Bay, off New South head Road, next door to the Rose Bay RSL Club, where some of us gather for supper before the meeting.

We are proposing to demonstrate a range of computer software for ham use with programs for satellite tracking, circuit drawing, qso logging, packet, SSTV, rig control and so on. Bring along some spare diskettes so that you can copy anything of interest to you.

A packet mailbox system has just been set up at the Rose Bay Club house, so if you want to leave a message or find out what is going on, just log in to VK2BV-1 on 144.850 MHz.

Internet users may wish to know that the club page continues to be improved. URL is as previously advised or use a search engine to find us.

BROADCAST ROSTER

Next Sunday, 15th February, 1998

Morning:
Announcer: Pixie VK2KPC
Engineer: Eric VK2EFY

Evening:
Announcer: Peter VK2EMU
Engineer: Pat VK2JPA

and tonight

Announcer: Bernard VK2IDS
Engineer: Jeff VK2BYY

If you would like to submit a news item for inclusion in the VK2 Divisional broadcast, please send it to us by one of the following means:

by post to PO Box 1066, Parramatta, New South Wales 2124
by fax to (02) 9633-1525
by packet radio to BCAST@VK2WI.NSW.AUS.OC
by Internet email to vk2wi@ozemail.com.au

The deadline for submissions is 2pm on the Friday preceding the broadcast; if sending by packet or Internet, please allow for forwarding delays in the network.

If sending printed copy, please double space your text, leave wide margins, and use a plain font such as Arial or Helvetica for clarity. Please proofread your text, check your grammar and punctuation, avoid using shorthand and abbreviations, and use the exact words you wish the announcer to say on air. Remember, the more care you take in preparing your news item, the better the announcer will read it.

Unfortunately, I have codes and many other who are against of CW
requirements hold codes.

I do not appreciate my code certificate nor what others have.

I just had to do it [to obtain HF access] for no reason.

I do not use CW, but I just had to it because the regulation says so.

It's like going to the war because the government says you so.

Good luck on your code. It is very easy.

Hi. I can talk to someone on FM simplex 50-100km away very easily.
I can get into Arthabasca repeater (Near Quebec City) from this
location while others don't.

You better know everything before you say something from your mouth.

I don't believe that this affects legality either way, the programmed band limits are a bit wider than the superset of the different regions band allocations, so even with this modification reversed, the thing will still be capable of transmitting on out-of-band frequencies.

It's probably worth doing the reverse mod just to reduce the risk of finger trouble, although a modern radio set for wideband output, with the power throttled back and a decent output attenuator makes, a very useful synthesised signal generator at a tiny fraction of the normal cost, and with much more comprehensive modulation facilities.

Perhaps the best approach would be for a radio to have its PA enabled for the normal bands, but to have a transverter output available at all frequencies? I've used a synth radio with 10Hz steps and an oscilloscope to develop crystal filters. With one of those computer interfaces from a PC and a detector into an analogue port, things could be automated somewhat.

Cheers
David GM4ZNX

The FOC activity on the bands over the weekend
is an annual 'club' contest called the FOC
Marathon. As correctly posted, it stands
for First Class CW Operators Club and it
based out of the UK. There is
a FOC homepage - www1.shore.net/~bruce/foc.htm
And you do not have to be a CW speed demon to be
a member. It sure beats SSB - anyone can talk.
73's - KN0V (FOC 1496)

There are at least 20 VHF, 10 UHF, and a couple 1.2 Gig machines I can hit while driving in the
metro Detroit area, all of which are active during various times of the day. From a base the number
of VHF machines I can hit running 5 watts and a dual band Ringo increases to at least 30. When I
drive south to Ohio I can hit the FARA network and communicate with my friend in Akron, OH and
Somerset, KY at the same time. I guess you loose.... There is plenty of activity here.

Interesting, your having simplex QSO's up to 100km away yet you 'scan' and hear nothing. Yea I'd say
that's one for the books Masa, you live in a metropolitan area and can't hear any repeaters in
31,000 sq. kilometers. You did say you were running simplex up to 100 km right?

> >> For HF, I rarely hear voice communications (for CW, I rarely here

> I am using wire antenna for 80m and works ok. Occasionally, I pick
> up liberty net.

News flash Masa, if your 'rarely' hearing voice communicatons on HF then it's NOT working O.K.You
didn't mention if it was outside or not but if it is then you have some serious problems my friend,
if your hearing the liberty net only 'occasionally' better check the transistors in the front end of
your Icom, most of those signals run 40db over s-9 here. If it's inside, well... I default to my
earlier statement. For CW you 'rarely' hear north american stations as much as you do international
ones? Tell us more Masa, I have never experienced this kind of radio phenomena!

Poor Masa, he want's so badly to be recognized but sadly, he still hasn't figured out how to receive
on his HF rig.

yeah you are busy with being lonely on your shack and doing these

> while 99.999% of others don't show any interests to you.

Well first, I'm never 'lonely on my shack'. 2nd, if you take a look around you'll see that there are
lots of hams building and exchanging ideas the NorCal QRP club kitted a 300mw 30m transceiver and
sold over 2000 of them. I meet people all the time on the air who have built them and we occasionally RC about different power mods etc.

Of course since you cant hear anything with your Icom 706 then you wouldn't really know what were

talking about on the air would you? Are you lonely Masa?

Tim

BY1QH RESULTS ON 144 MHz EME, SATURDAY, FEBRUARY 7

SUMMARY:

RX and TX performance much better than expected!
Got QRV 45 minutes later than planned. SRI!
Very low local QRM all the time!!! UFB WX.
WKD I2FAK SM2CEW PE1LCH PA2CHR HRD 9H1CD,
Sked 1600-1630 continued until 1728.
PA died at 1900.
We detected only 2-3 unidentified callers.
Seemed like very few called us.....?
Very satisfied any way!

DETAILS:
P=Planned activity
H=This is what happened
UTC
P 1130-1230 EME random.
H 1215-1230 EME random. SRI ABT late QRV!!
P 1230-1300 TEP sked SSB 144.136 MHz with VK6XLR
H 1230-1300 TEP sked. NIL HRD in both directions.
P 1300-1330 EME sked with PE1LCH, PA2CHR tail end. QRG unknown
H 1300-1330 EME sked with PE1LCH. Too weak signals to copy.
P 1330-1600 EME random
H 1330-1600 EME random. WKD I2FAK 1356.
Called 9H1CD 1443-1518, NC.
WKD SM2CEW 1552.
P 1600-1630 EME sked with PE1LCH, PA2CHR tail end. QRG unknown
H 1600-1728 EME sked with PE1LCH, PA2CHR tail end.
The signals were improving all the time, so we kept
on going. At 1700 we just needed the "Q" in our
call sign. Completed with PE1LCH at 1711.
Completed with PA2CHR at 1728.
P 1630-1800 EME random. From 1700 our local QRM is less bad!
H 1730-1900 EME random. From about 1814 there was an
unidentified station calling, possibly sending:

R, N, 52, B, U, and L ...? At about the PA
died....QRT
P 1800-1830 EME sked with PA2CHR. QRG unknown NW.
P 1830-2035 EME random

P 2130-2230 CQ DX 1827 kHz +/- QRM, 400 W & dipole at 30 magl
H 2140-2235 CQ 1827 kHz/1826.6 kHz, QSX 1829. WKD only BV and
YC.

COMMENTS:

VY SRI ABT getting QRV 45 minutes late! Some preparations took
longer than expected.

The local QRM level was so low that we had to make sure several
times that the pre-amp was OK....! UFB! I even switched on the
built in pre-amp in the IC-706. The Chinese new year is VY
important in BY. The university was on holidays, so we guess all
local QRM sources were switched off. Even the paging transmitters
seemed to affect us less than expected, even in daytime.
We were VY happy and encouraged by being able to work "average
size" PE1LCH and hear 9H1CD, after having to struggle with big
guns like KB8RQ, W5UN and VE7BQH.

We got the impression that few stations were QRV since PA2CHR
reported good signals from us during our QSO, also we think I2FAK
called us a 2nd time giving us 529 report, and SM2CEW seemed to
have had a very solid copy of us. He also found our sked QRG
144.120 MHz easily. We even made a few phone calls to SM to try to
stir up some activity, but soon the PA died!! Thanks any way to
SM4SJY who we think made several phone calls for us.

Especially happy about being able to work PE1LCH and PA2CHR who
both contributed with VY important equipment to BY1QH!!! (It is
just too bad that we could not give both of you a "first"!)
Too bad about the new PA going QRT! We really hope we can repair
it. The old PA is still in BY, but it was not in the shack, so we
could not switch.

Next activity is not yet planned, but it is likely to take place
within 3-6 weeks.

Pictures, sound file, log, and other info ABT BY1QH can be found
on: http://www.horizon.nl/~tdekkers/by1qh/index.html
The BY1QH home page is made and hosted by PA3DSS.

Station improvements since 1997 are:
Improved elevation readout at low elevation angles
New RX filter 250 Hz (500 Hz B4), and new PA (presently QRT)

Other equipment same as before:
IC-706 Mk2
SSB electronics pre-amp 0.8 dB NF in mast head

4x9 el Vargarda, total gain 17.7 dB
Stacking loss 0.5 dB, feeder loss 0.7 dB

QTH: LOC ON80DA
Tsinghua University in Beijing

>would NOT seek NOR support any attempt to ban the voluntary use of
>guns by ANY legitimate user ... there is no need to ... all we
>want is to take the guns out of hands of illegitimate users

Yup, I read that in HCI literature somewhere. Of course, what they
don't say is "legitimate users" is defined as "law enforcement" only.

I understand that there is one, but I forget the name. *BUT*,
how about Baycom, itself? If you shutdown Windows 95 into DOS mode
(not DOS in a window, but rather click on 'start', 'shutdown',
and 'restart in DOS mode') you will get a DOS prompt that does
run the standard Baycom software. Of course, you can't run anything
else at the same time. Bummer if you want to do packet to a satellite
(e.g. Mir or DO-17), but it does work.

Good luck,

Greg.

==========
All I know is that I have had more fun with my Unden, evidently not an
"real" amateur rig $200.00 2600 than I have had with my $700.00 Kenwood
"real" amateur rig TS140S, tho the 140 is more versitale. I'll have to
visit the copper webpage $139.00 sounds like a good starting point for a
10M IF rig to use wit tranverter and receive converters. Don't kid
yourself many CBers Know what the good rigs are, there are many that
own nicer rigs that I never afford.

Hello,

Over the past 25 years Whayne's magazine inmho has been consistant in
publishing homebrew articles and covering some of the more off the
beaten path of activities as T-hunting and balloon flights. True also
is the fact his editorials consitantly go off in strange tangents. Like
news groups they force you to seperate the B. S. from the substance. If
Whayne goes bust or croaks I'll miss the magazine.

Hello All!

The "Radioclub Alfonso X" will be on the air on the next edition of the CQ WPX contest next month.

The especial station will be a multiband and multioperator and the callsign will be ED4RAX, an especial Spanish (EA) callsign.

We hope to give you some points!

I find it somewhat interesting that the no-coders are tellling me I
can't use any other the benefits of cw in my arguements and yet they
are using anything they can think of as reasons not to have it.

One benefit, I can think of off hand happened in an amateur radio
event I was involved with. The group I was with were doing a yachet
race. As it happened two people, using the radio channel, wanted to
pass a message which was not for public ears. The goups also realised
that many hams and nonhams were listening to this event on ham sets as
well as scanners. So, since they could move to another channel,
without at least one person following them, they resorted to sending
the information via cw and the Touch tone pad of their handhelds.

I 'do' believe that cw has its benefits. I find that most amateurs,
that I have been associated with, learned most of general ideas about
amateur radio via cw. For example, most people will admit that 2
meters is not a very good way to learn about amateur radio and hf
voice is almost like 2 meter voice. Most hams that I have been
associated with have told me that they got most of their amateur raido
training via cw. To a large extend field day relies of cw stations,
though they do use voice.

Voice does have its benefits but most amateurs get their early
training via cw.

Now I know that many no-codes will disagree with they but I can only
offer my personal experiences.

1129. Packet Programs (was Paket 6.1 Question)

Newsgroup: rec.radio.amateur.misc
Date: 1998-02-10 00:00:00 UTC
From: Dave Burr <dtburr@mcs.com>
Message-ID: <01bd364f$0a62b800$693f5fcc@dtburr.mcs.com>
Source record: 178689
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

Bill:

Are you sure the COM port settings are correct on the Paket 6.1 program? I know that users of our Packet Magic program have sometimes had problems because they set up PM "just like their other packet program", rather than actually paying attention to the baud rate and other parameters that they need.

For example, on some software you can set up a speed of 9600 (or anything else) and still run 1200 baud packet because the software and or firmware on the TNC outthinks you and sets the speed to 1200 baud regardless of what you put in. If I'm not mistaken, Paket and many (most) other programs require you to actually put in the speed you are running. We just had a guy who refused to believe that he was running 1200 baud packet because the "old program ran with a setting of 9600". (Neither his TNC nor his radio were even capable of running 9600 baud packet). Rather than simply setting the thing to 1200 as we suggested, he returned the program.......(!!!!)

You might also try using Windows Terminal with the same settings as what you are trying to use with PakRat. If Terminal works and Paket does not, Paket is fouled up. **I would suggest to all users that they troubleshoot these problems using the most plain vanilla terminal program to make sure their settings are correct. It does not pay to use the enhanced programs to troubleshoot connection and settings problems because almost all of us slick publishers like to code little toys into our programs to show how brilliant we are, and you never know when the "enhancement" is the problem and not something you did**
Good luck es 73 de Dave

Dick, Howard was man enough to go look up exactly what he said about that posting in a later posting. Why didn't you? I'm not defending him, just passing on some truth. He corrected his poor English in a later posting. He was trying to ask a rhetorical question and didn't state it properly as I indicated and Howard verified. You don't suppose you are still pulling things out of your posterior, are you? Let's hear you say something in Japanese without error, Dick. If I remember correctly, the Japanese syntax for an "If/then" statement is completely different from English.

Mike, CW has given and continues to give a lot of hams a lot of pleasure,
including myself. You have been suckered into arguing the merits of the
CW mode, rather than the merits of the Morse code test. The CW mode has
a wealth of merit. It's the Morse code testing that has little merit.

Excuse me, folks, but this whole thread is silly, with some pretty naive particpants.

If you post, your email address can be extracted by any number of applications (our company even publishes one, but you won't see any spam from us.). No Internet marketer who has any knowledge of what is going on needs you to "send" them anything just to get your e-mail address.

In addition, there is really nothing legitimate that any intelligent person can do with a collection of "junk mail". Half of it has no usable reply address, and of the other half 1) the "company" has been kicked off their ISP by the time you reply to them, or 2) a third party has done their e-mailing for them and you can't get to them. and, 3)The "company" is almost always just some wierdo or collection of weirdos, selling no tangible product, that has no interest in anything you have to say using his reply address, even if he would read your reply.

Get smart, and don't get bent out of shape about it. If some company is bugging you with their unsolicited mail, first contact the administrative and technical contacts on their domain (go to the InterNIC "Whois" server). If they do not go away, contact your own ISP.

antennas built in Germany. The antennas had the appearance of a
knitting machine - hence they were called "Woellenweber".

>I would build for my ship (steel sailboat) one SSB antenna . On the
>eightstay I have not good experiences.
Ich verstehe nicht "eightstay". Das muss eine falsche Uebersetzung
sein.

I know of amateurs who have used the "backstay" as an antenna. (d.h.,
the steel cable that runs from the Stern (of the boat - nicht Sternen
wie im Himmel) up to the top of the mast. They have reported very
good results. The steel hull of your boat will enhance a "ground
plane" vertical. All you need is a proper tuner or transmatch to
match the impedance of the backstay to your transmitter. You should be
able to operate on any frequency from 6Mhz through 30MHz.
40M, 30M, 20M, 17M , 15M, 12M and 10M. It is not a sufficient antenna
for lower frequencies unless you provide some capacitance or "top hat"
loading. (d.h. viele quadratmeter auf der spitze).

>It gives in the ship accessory SSB antennae those are approx 4 to 6 m of 1,6
>to 24 MHZ long the entire maritime mobile service field and for the entire
>maritime mobile service field

>Now my question:
>Since these antennae cost approx 600 DM would like to build themselves.

A good tuner will cost less than $140 for power under 300 watts. The
insulation of the backstay from the mast and the hull is mechanical
problem.

It's very simple. You are transmitting on frequencies
assigned for amateur radio operation. If you don't know
what happens inside your eqipment when you press a
specific button, or tune the dial of your rig which has
been repaired by a third party, you can
easily cause unnecessary interference to others or
find yourself cited by the FCC for breaking the
Communications law. A theory test is SUPPOSED to make
certain that you will operate your equipment correctly
and not end up killing yourself in the process.--W8QX

Know Wayne Green? The guy who owns and runs the magazine '73 Amateur Radio Today'? He calls himself the "King of Ham Radio".... I think he's 75 years old. Anyway, has anyone READ THE CRAP this guy writes? I guess this is not the most useful thread to start (assuming anyone even replies) but this guy who has gone on Art Bell's AM show calling himself the King of Ham Radio and a "lonely genius" (his exact words) is a pseudo-science proponent and a nut!
Read the monthly editorials by this guy, you'll be floored! He says this month that the moon landing was a hoax, that ice ages occur "instantaneously, not over time" ... am I lost or is this somewhat looney? He actually wrote that "it is this instant flash-freeze effect of an ice age which killed the dinosaurs" (here he has solved the question of the extinction of the dinosaur for us, all by his lonesome) and that the meat of "mammoths frozen in ice for ages can be thawed and eaten without any loss in flavor"... Excuse me, WHERE are these excellent specimens of mammoths that still have MEAT on the bones? They do not exist, Mr. Green is making things up to furthur his glory and delusion of the "lonely genius"! He lies to hams, he ridicules the space industry as a front for federal money-laundering, and yet it is the aerospace industry which has given medicine, computers, and yes RADIO, so much new technology....
I rant and rave, forgive me, I'm sure he is a nice guy. But his attempts to sell his ideas of alien experimentation, lunar hoaxes, government conspiracy, anti-science all are rather counter-productive to the thinking, learning ham. And besides, NONE of what he editorializes about has anything to even DO with radio!
He also sells what he calls the "Biolelectrifier", a 5MHz shocker-type of therapy unit..... There is NO evidence AT ALL that this thing does ANYTHING at all, yet Green claims it can help arthritis, prevent or even "cure" cancer, etc..... Sound like another batch of snake oil? You bet.
This guy represents himself to the world as a "noble, intelligent speaker for radio everywhere" (his words on CNN Today last month) and yet he tells lies, and misleads ham ops.... I merely noticed that no one has posted about the King of Ham Radio, so I wonder if everyone feels, as I do, that this guy is just a kook? Hope that's the case, but if anyone believes his drivel, I tremble for the future young radio ops who decide that a "Bioelectrifier" or a coat-hanger gamma-match with speaker-wire is a better antenna than a dipole.....
Sorry about the rant. It got under my skin!
My two cents,
Mike in MO.

> I know of amateurs who have used the "backstay" as an antenna. (d.h.,

Yup, the computer got that wrong, and I'm pretty sure he did in fact mean `backstay'. The backstay is called `Achterstag' in german, and `acht' is german for the number `eight', which is how I suppose the rather linguistically challenged virtual babelfish that did the translation came up with `eightstay'...

[Auf deutsch und in k"urze: Das Achterstag hei"st `backstay' auf englisch]

As an aside, I once took a paragraph from a german newspaper and munged it through the translator that's available on alta vista, translating back and forth between german and english (yes, I was bored). Surprisingly, the iteration actually converged and resulted in something that vaguely resembled modern poetry, but didn't have very much in common with the original passage. Anyway...

> Andy N7VTB

Andy,

This is the classic symptom of a switching mode power supply (SMPS) spewing its RFI venom across the HF bands. The problem will be made worse if

a) you use an unbalanced antenna such as a random wire or long wire.
b) the noise source (offending power supply) is physically near your antenna.

What else besides your computer and TV might be plugged in? Check for battery chargers, electric razors and toothbrushes, laptops, etc. Another thing you can try is to turn off the main breaker to your house (since you operate on batteries) and see if the noise goes away, indicating that it is something of yours. I know you don't want to hear this, but on a quiet night I can hear several SMPS's owned by neighbors on all sides. You might find some relief as you go up in frequency (14 MHz -> 18 MHz -> 21 MHz ...) but if the SMPS causing the RFI is especially close (or noisy), you may even hear it on these higher bands.

Once you find the source, you will need to begin filtering, shielding, re-orienting, or disposing of it. (ha ha). At first, concentrate on locating the culprit, then we'll work on the other stuff.

Good luck,

Al W6LX

Ha ha ha ha ha ha .. this is the best one from a no-coder that I have seen.

There will be endless posts to you about the usefullness of code so I
won't bother.

However, codes and cypers as you put it, are codes only if the key
to de-cypher them is witheld from those the encrypted message is
not intended to reach. If thatb is your problem, you don't have a copy
of the code to de-cyper morse code I can give you numerous
references where you can get a copy.
